# There Is No Largest Prime Number

The proof uses *reductio ad absurdum*.

Theorem

*There is no largest prime number.*

Proof.

1

Suppose  $p$  were the largest prime number.

2

Let  $q$  be the product of the first  $p$  numbers.

3

Then  $q + 1$  is not divisible by any of them.

4

Thus  $q + 1$  is also prime and greater than  $p$ .
