

The askinclude package

Pablo A. Straub

Heiko Oberdiek*

<heiko.oberdiek at gmail.com>

2016/05/14 v2.3

Abstract

This package replaces `\includeonly` by an interactive user interface.

1 Documentation

1.1 User interface

The `\include` feature of \LaTeX allows the division of the text body in separate compilation units. It is page based and stores counter settings in additional auxiliary files. `\includeonly` limits the actually included files to the ones, listed in its argument.

Example:

```

\documentclass{report}

\usepackage{askinclude}

% Don't use \include in the preamble.
% Instead \input can be used or make a package

\begin{document}
\include{title}
\include{introduction}
\include{summary}
\include{index}
\end{document}

```

Package `askinclude` adds an interactive user interface. The user is asked which files he want to include and sets `\includeonly` accordingly.

The first time the package is used the question looks like:

```
*****
*** Package askinclude Question ***
*****

Previous answer (noregexp):
[*]

Regular expressions:
--> [noregexp] disabled
    [makematch] enabled, using package `makematch'
    [pdfmatch] enabled, using pdfTeX's \pdfmatch

Which files do you want to include?
[foo,bar] comma separated file or pattern list
[*]       all files
[-]       no files
[?]       ask for each file
[]        use the previous answer

\answer=chapter2,summary
```

Square brackets are used as quotation symbols, they are not part of the answer. The answer by the user follows in the last line after `\answer=`.

[foo,bar]: A comma separated file list (also one file only) is passed to macro `\includeonly` directly. If regular expression support is enabled, the entries in the list are interpreted as file name patterns that will be matched against the file names in `\include`, see [section 1.3](#).

[*]: This is a shortcut for specifying *all* files.

[-]: This means *none* of the files is included.

[?]: The switches in single asking mode. The user will be asked at each `\include`. See [section 1.2](#).

[]: Just pressing return (empty string) uses the default answer, that was stored in the auxiliary file (`.aux`) of the previous \LaTeX run with package `askinclude`. Without previous runs the default is `[*]` for all files.

[noregexp]: Turns regular expression support off.

[makematch]: Enables regular expression support package `makematch` provides.

[pdfmatch]: It is shown, if pdfTeX 1.30 or later is used. It relies on an undocumented feature `\pdfmatch` that may change in future versions of pdfTeX.

Package `askinclude` remembers the files of `\include` in the auxiliary file and the given answer. they are presented at the next run at the start of the question:

```
*****
*** Package askinclude Question ***
*****

Files, found by previous run in \include:
(-) title
(-) introduction
(-) chapter1
(+) chapter2
(-) chapter3
```

(+) summary

Previous answer (noregexp):
[chapter2,summary]

...

(+) and (-) marks files that were and were not included in the previous run. The file list and marks are not always correct. For example, if `\include` statements are added or removed. If the method of regular expression support is different, then the marks only reflects the mode of the previous answer.

1.2 Single asking mode

The special answer ‘?’ trigger single asking mode, at the next `\include` the user is asked again:

```
*****  
*** Package askinclude Question ***  
*****  
  
Include `title'? [y]es, [n]o, [A]ll, [N]one, [D]efault (n):  
  
\answer=
```

Use the letter inside the square brackets as answer. An empty string uses the default answer, the letter in parentheses. The answers are:

[y]: The file is included.

[n]: The file is excluded.

[A]: This file and all following files are included.

[N]: This file and all following files are excluded.

[D]: Use the default answer for this and all following files.

If the file is known from the previous run, then the default is ‘y’ or ‘n’ corresponding to the mark ‘(+)’ or ‘(-)’ in the list of previous files. Otherwise ‘y’ is used as default.

1.3 Regular expressions

Three methods are available that can also set by package options:

noregexp: Regular expression support is disabled.

makematch: Use package `makematch`.

pdfmatch: Use pdf \TeX 's `\pdfmatch` if available.

Without options the value remembered in the auxiliary file is used, otherwise the default is `noregexp`.

1.3.1 Method `makematch`

Package `makematch` (part of `qstest`), written by David Kastrup provides pattern matching based on wildcards:

[*]: The star matches zero or more characters. Thus a lonely star matches anything.

[!]: The exclamation mark at the begin of a pattern negates it, thus the matching files are excluded.

The pattern list is evaluated for a file name from left to right. Always a file name must match the whole pattern. The file is included if it is matched by a pattern and not excluded afterwards. Examples:

Pattern list	File names	Result
foobar	foobar,dummy	foobar
foo*	foobar,xfoobar	foobar
foo	xfoobar	xfoobar
f*b*r	foobar	foobar
*	any	any
!foobar	foobar,other	other
!foo*	xfoobar	xfoobar
in*,!*dex	intro,index	intro
!index,in*	intro,index	intro,index
*,!chap2	chap1,chap2,chap3	chap1,chap3

The example in the last line shows, how the behaviour of package `excludeonly` [2] can be simulated.

The documentation of package `makematch` tells the the empty pattern does not match anything. But if you answer the question with an empty string the answer of the previous run is used. Also curly braces are not reliable because they can get stripped during the processing of the answer. Using a pair of empty curly braces or the comma for two empty patterns currently works, but this is specific for the current implementation and may change in future. But the special answer ‘-’ is available.

1.3.2 Method `pdfmatch`

In pdfTeX 1.30 the new primitive `\pdfmatch` was introduced. It is not documented yet, because it was not decided if it remains and which implementation of regular expressions should be used. Thus the situation may change in later versions of pdfTeX. Currently (1.30 until 1.40) it uses a library for POSIX 1003.2 regular expressions, see manual page “`regex(7)`”.

If a pattern in the pattern list is invalid, the package prints a warning and removes the pattern from the list. Actually there are two warnings, the other warning is generated by pdfTeX itself.

In opposite to `makematch` the pattern only needs to match the specified part of the file name. For matching the whole name, the symbols ‘^’ and ‘\$’ for begin and end of string must be included.

Additionally an initial exclamation mark ‘!’ implements the same logic as method `makematch`. The match result is inverted, the matched file excluded.

Examples:

Pattern list	File names	Result
foobar	foobar,dummy	foobar
foo.*	foobar,xfoobar	foobar,xfoobar
^foo.*	foobar,xfoobar	foobar
foo\$	foo,foobar	foo
fo?bar	fbar,foabar,foobar	fbar,foabar
fo+bar	fbar,foabar,foobar	foabar,foobar
fo*bar	fbar,foabar,foobar	fbar,foabar,foobar
chap3	chap3,chap32	chap1,chap3,chap32
chap[13]	chap1,chap2,chap3	chap1,chap3
chap(1 3)\$	chap1,chap3,chap33	chap1,chap3
.*	any	any
!foobar	foobar,other	other
in.*,!dex	intro,index	intro
!index,in.*	intro,index	intro,index
.*,!chap2	chap1,chap2,chap3	chap1,chap3
.*,!bla	foo,bla,blabla	foo
.*,!^bla\$	foo,bla,blabla	foo,blabla

The example in the last line shows, how the behaviour of package `excludeonly` [2] can be simulated. As the third last line shows, that sometimes ‘^’ and ‘\$’ can be omitted, but this will not work always, shown in the second last line.

1.4 History

Package `askinclude` was invented by Pablo A. Straub in 1991 and maintained until 1994.

In October 2007 it was removed from “TeX Live” because of the no-commercial license [1]. Herbert Voß initiated a search for the author in the newsgroup `comp.text.tex` [3] to ask him to change the license.

It seems that the author could not be reached any more. Joseph Wright suggested a reimplementaion that I (HO) have done as package `askinc`. Soon it was enhanced by feature requests.

Then Ulrike Fischer found email addresses of the original author and Jim Hefferon succeeded in contacting him. He allowed a change of the license to LPPL and the transfer of the maintainership to someone else.

Thus I merged both packages as `askinclude` in a new major version 2. The license is LPPL.

1.5 New features of version 2

- License is now LPPL.
- A list of `\include` files that are detected by the previous run is printed before the question.
- If the special answer ‘?’ is given, then the user is asked at each `\include`.
- Support for regular expressions.
- The remaining stuff in the `.aux` file does not cause errors, if the package is removed.
- The use of `\includeonly` before the package loading time is detected and respected by taking precedence. After the package is loaded, `\includeonly` is disabled and prints a warning.

1.6 Compatibility to version 1

- The user interface of version 1 with its special answers ‘*’, ‘-’, and ‘+’ remain unchanged, but it is extended by version 2 with the special answer ‘?’ and support for regular expressions can be enabled.
- As reimplementing the internal macros have changed of course.
- .aux files that are written by version 1.x will work with version 2.x because \@includeonly is recognized.
- L^AT_EX 2.09: The package works as \documentstyle option in compatibility mode of L^AT_EX 2_ε. It is possible that it will not work in pure L^AT_EX 2.09.

2 Implementation

2.1 Header and catcodes

```
1 \*package)

    Luatex compat
54 \ifx\pdfextension\@undefined\else
55 \RequirePackage{luatex85}
56 \fi

```

2.2 Delay action after preamble

`\AskInc@AtBeginDocument` Some actions such as `.aux` file writing cannot be performed in the preamble. `\AtBeginDocument` delays such action until `\begin{document}`. However `\AtBeginDocument` must not be used after that time (`\@onlypreamble`). Thus `\AskInc@AtBeginDocument` uses `\AtBeginDocument` in the preamble and afterwards executes the code immediately.

```

57 \AtBeginDocument{%
58 \let\AskInc@AtBeginDocument\@firstofone
59 }
60 \providecommand*{\AskInc@AtBeginDocument}{\AtBeginDocument}

```

2.3 Write entry in .aux file

`\AskInc@WriteAux` The first argument is written to the main `.aux` file and the second argument is executed if writing was possible. Remember `\nofiles` prevents writing to auxiliary files.

```

61 \def\AskInc@WriteAux#1#2{%
62 \AskInc@AtBeginDocument{%
63 \if@filesw
64 \immediate\write\@mainaux{#1}%
65 #2%
66 \fi
67 }%
68 }

```

2.4 Remember \include files

`\AskInc@CharHash`

```
69 \edef\AskInc@CharHash{\string#}
```

`\AskInc@WriteDefAddList`

```
70 \def\AskInc@WriteDefAddList{%
71 \AskInc@WriteAux{%
```

98     }%

99 }{%
100     \global\let\AskInc@WriteDefAddFile\relax
101 }%
102 }

```

\AskInc@AddFile

```

103 \AtBeginDocument{%
104     \global\let\AskInc@AddFile\@gobble
105 }

```

\AskInc@WriteAddFile

```

106 \def\AskInc@WriteAddFile#1{%
107     \AskInc@WriteDefAddFile
108     \AskInc@WriteAux{%
109     \string\AskInc@AddFile{#1}%
110     }{}%
111 }

```

\AskInc@Files

```

112 \providecommand*{\AskInc@Files}{}

```

Summary: Now `\AskInc@Files` is always defined and either empty or contains a comma separated list of `\include` files of previous run.

The `\include` files are remembered by using `\AskInc@WriteAddFile` at each `\include`.

2.5 Redefine `\include`

\AskInc@OrgInclude

```

113 \newcommand{\AskInc@OrgInclude}{}
114 \let\AskInc@OrgInclude\include

```

\AskInc@AskFile

```

115 \let\AskInc@AskFile\@gobble

```

\AskInc@MatchFile

```

116 \let\AskInc@MatchFile\@gobble

```

`\include`

```
117 \renewcommand*{\include}[1]{%
118   \AskInc@WriteAddFile{#1}%
119   \AskInc@AskFile{#1}%
120   \AskInc@MatchFile{#1}%
121   \AskInc@OrgInclude{#1}%
122 }
```

2.6 Store answer and match method in .aux file

```
123 \AtEndOfPackage{%
124   \AtBeginDocument{%
125     \ifundefined{AskInc@Answer}{-}{%
126       \AskInc@WriteAux{%
127         \string\gdef\string\AskInc@Answer{\AskInc@Answer}%
128       }{}%
129     }%
130     \ifundefined{AskInc@MatchMethod}{-}{%
131       \AskInc@WriteAux{%
132         \string\gdef\string\AskInc@MatchMethod{\AskInc@MatchMethod}%
133       }{}%
134     }%
135   }%
136 }
```

2.7 Support for `\@includeonly`

`\@includeonly` Macro `\@includeonly` is defined for compatibility reasons only, if the .aux file was written by versions before 2 of package `askinclude`.

```
137 \providecommand*{\@includeonly}[1]{%
138   \gdef\AskInc@Answer{#1}%
139   \ifx\AskInc@Answer@empty
140     \gdef\AskInc@Answer{-}%
141   \fi
142   \global\let\AskInc@MatchMethod\@empty
143 }
```

2.8 Stop if `\includeonly` is active

If `\includeonly` is used before, the questions are skipped and the data in the main auxiliary file is preserved.

```
144 \if@partsw
145   \PackageWarningNoLine{askinclude}{%
146     Previous \string\includeonly\space detected,\MessageBreak
147     therefore asking for files is suppressed%
148   }%

```

Dummy options.

```
149 \DeclareOption{makematch}{}%
150 \DeclareOption{pdfmatch}{}%
151 \DeclareOption{noregexp}{}%
152 \ProcessOptions%
```

Preserve `\AskInc@MatchFiles`.

```
153 \ifundefined{AskInc@MatchFiles}{-}{%
154 }{}%
155 \ifx\AskInc@MatchMethod\@empty
156   \else
157     \AskInc@WriteAux{%
158       \string\gdef\string\AskInc@MatchFiles{\AskInc@MatchFiles}%
159     }{}%

4 Installation

4.1 Download

Package. This package is available on CTAN¹:

[CTAN:macros/latex/contrib/oberdiek/askinclude.dtx](#) The source file.

[CTAN:macros/latex/contrib/oberdiek/askinclude.pdf](#) Documentation.

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](#)

TDS refers to the standard “A Directory Structure for \TeX Files” ([CTAN:tds/tds.pdf](#)). Directories with `texmf` in their name are usually organized this way.

4.2 Bundle installation

Unpacking. Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory `TDS:scripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

4.3 Package installation

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain \TeX :

```
tex askinclude.dtx
```

¹<http://ctan.org/pkg/askinclude>

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

<code>askinclude.sty</code>	<code>→ tex/latex/oberdiek/askinclude.sty</code>
<code>askinclude.pdf</code>	<code>→ doc/latex/oberdiek/askinclude.pdf</code>
<code>test/askinclude-a.tex</code>	<code>→ doc/latex/oberdiek/test/askinclude-a.tex</code>

<code>test/askinclude-test23.tex</code>	<code>→ doc/latex/oberdiek/test/askinclude-test23.tex</code>
<code>test/askinclude-test24.tex</code>	<code>→ doc/latex/oberdiek/test/askinclude-test24.tex</code>
<code>askinclude.dtx</code>	<code>→ source/latex/oberdiek/askinclude.dtx</code>

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

4.4 Refresh file name databases

If your $\text{T}_{\text{E}}\text{X}$ distribution (`te $\text{T}_{\text{E}}\text{X}$` , `mik $\text{T}_{\text{E}}\text{X}$` , ...) relies on file name databases, you must refresh these. For example, `te $\text{T}_{\text{E}}\text{X}$` users run `texhash` or `mktextlsr`.

4.5 Some details for the interested

Unpacking with $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$. The `.dtx` chooses its action depending on the format:

plain $\text{T}_{\text{E}}\text{X}$: Run `docstrip` and extract the files.

$\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$: Generate the documentation.

If you insist on using $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$ for `docstrip` (really, `docstrip` does not need $\text{L}^{\text{A}}\text{T}_{\text{E}}\text{X}$), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{askinclude.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL^AT_EX:

```
pdflatex askinclude.dtx
bibtex askinclude.aux
makeindex -s gind.ist askinclude.idx
pdflatex askinclude.dtx
makeindex -s gind.ist askinclude.idx
pdflatex askinclude.dtx
```

5 Catalogue

The following XML file can be used as source for the [T_EX Catalogue](#). The elements `caption` and `description` are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is `askinclude.xml`.

```
1523 ⟨*catalogue⟩
1524 <?xml version='1.0' encoding='us-ascii'?>
1525 <!DOCTYPE entry SYSTEM 'catalogue.dtd'>
1526 <entry datestamp='$Date$' modifier='$Author$' id='askinclude'>
1527   <name>askinclude</name>
1528   <caption>Interactive use of \includeonly</caption>
1529   <authorref id='auth:straub' />
1530   <authorref id='auth:oberdiek' />
1531   <copyright owner="Pablo A. Straub" year='1991-1994' />
1532   <copyright owner="Heiko Oberdiek" year='2007,2008,2011' />
1533   <license type='lppl1.3' />
1534   <version number='2.3' />
1535   <description>
1536     The package asks the user which files to put in a \includeonly
1537     command. There is provision for answering &#x201C;same as last
1538     time&#x201D; or &#x201C;all files&#x201D;.
1539     <p />
1540     The package is part of the <xref refid='oberdiek'>oberdiek</xref> bundle.
1541   </description>
1542   <documentation details='Package documentation'
1543     href='ctan:/macros/latex/contrib/oberdiek/askinclude.pdf' />
1544   <ctan file='true' path='/macros/latex/contrib/oberdiek/askinclude.dtx' />
1545   <miktex location='oberdiek' />
1546   <texlive location='oberdiek' />
1547   <install path='/macros/latex/contrib/oberdiek/oberdiek.tds.zip' />
1548 </entry>
1549 ⟨/catalogue⟩
```

6 Acknowledgement

Tom Scavo suggested saving the include file list from the previous run and a simplified user interface.

Joseph Wright suggested questions for each `\include`.

8 History

[1991/11/05 v0.95]

- First beta-test version (asked two questions).

[1991/11/05 v0.99]

- Second beta-test version (asks one question; uses ‘*’ and ‘-’).

[1991/11/07 v1.0]

- Changed prompts (sent to [comp.text.tex](http://groups.google.com/group/comp.text.tex/browse_thread/thread/728a3e73c04c6789/349e31865c40d00c)): “Interactive inclusion of files in LaTeX”²

[1991/12/13 v1.1]

- *Unknown*.

[1994/11/02 v1.2e]

- Two small changes to run under LaTeX2e [RF].
- Additional documentation [TRS].

[2007/10/15 v1.0 (askinc)]

- Reimplementation, published as askinc in newsgroup [comp.text.tex](http://groups.google.com/group/comp.text.tex/browse_thread/thread/728a3e73c04c6789/349e31865c40d00c): “Re: askinclude.sty”³
- Listing of included files, collected from the previous run before the question.
- No error message by .aux file if package is removed.

[2007/10/23 v2.0]

- The next version of askinc becomes version 2.0 of askinclude.
- ‘?’ added for questioning each file.
- `\includeonly` has precedence until package loading. Then it is disabled by a warning.
- Documentation rewritten/added.
- Tests added.

²Url: <http://groups.google.com/group/comp.text.tex/msg/34b770a7c277e79c>

³Url: <http://groups.google.com/group/comp.text.tex/msg/2d638b84a858fdc8>

[2008/08/11 v2.1]

- Code is not changed.
- URLs updated.

[2011/12/02 v2.2]

- Bibliography rewritten for biblatex.

[2016/05/14 v2.3]

- Luatex compatibility
