

Lwarp

LATEX HTML5

The `lwarp` package

LATEX to HTML

v0.78 — 2019/11/07

© 2016–2019 Brian Dunn
bd@BDTechConcepts.com

Abstract

The `lwarp` package converts LATEX to HTML by using LATEX to process the user's document and directly generate HTML tags. External utility programs are only used for the final conversion of text and images. Math may be represented by SVG images or MathJax. Hundreds of LATEX packages are supported.

Documents may be produced by DVI or PDF LATEX, LualATEX, XƎLATEX; by several CJK engines, classes, and packages; or by customized systems such as `perltx` and `pythontex`. A `texlua` script automates compilation, index, glossary, and batch image processing, and also supports `latexmk`. Configuration is semi-automatic at the first manual compile. Support files are self-generated. Print and HTML versions of each document may coexist.

Assistance is provided for HTML import into EPUB conversion software and word processors.

Requirements include the commonly-available POPPLER utilities (included with MIKTEX) and PERL. Detailed installation instructions are included for each of the major operating systems and TEX distributions.

A quick-start tutorial is provided, as well as extensive documentation for special cases, a general index, and a troubleshooting index. Automatic error testing is provided for configuration files, package load order, and image generation.

SVG math and many other generated images include LATEX expressions in the alt tags. MATHJAX may be used with advanced equation numbering under the direct control of `lwarp`.

Complicated tables are supported, which copy/paste well into LIBREOFFICE WRITER.

Supported classes and packages include memoir and koma-script, cleveref, caption, mdframed, siunitx, and many popular packages for tabulars, floats, graphics, theorems, the title page, bibliography, indexing, footnotes, and editorial work.

TEX is a self-modifying tokenized macro-expansion language. Since `lwarp` is written directly in LATEX, it is able to interpret the document's meaning at a deeper level than external conversions which merely approximate TEX. HTML5 and CSS3 are leveraged to provide advanced features such as booktabs trim, multicolumns, side-by-side minipages, and JAVASCRIPT-free navigation.

For a list of supported features, see table 2: Supported packages and features.

To update existing projects, see section 1: Updates.

Lwarp is still in development. Changes are likely.

This work may be distributed and/or modified under the conditions of the LaTeX Project Public License, either version 1.3 of this license or (at your option) any later version. The latest version of this license is in <http://www.latex-project.org/lppl.txt> and version 1.3 or later is part of all distributions of LaTeX version 2005/12/01 or later.

Support TeX development

TeX and related projects:

- are mostly open-sourced and a volunteer effort;
- benefit students, academics, scientists, engineers, and businesses;
- help drive education, public and private research, and commercial activity;
- are used in the fields of mathematics, science, engineering, and humanities;
- are international in reach;
- span decades of development;
- are enduring — many older packages are still actively used and maintained;
- are largely backwards compatible;
- are portable across all the major computing platforms;
- are usable even on older computers and away from internet access;
- are continuing to maintain relevance with modern improvements;
- require no yearly subscription fees;
- and are supported by an active community of knowledgeable volunteers.

Please consider helping by joining and/or contributing to the TeX Users Group, a United States 501(c)(3) tax-exempt charitable organization. Contributions are accepted by credit card, check, or Pay Pal, via the United Way, or by USA or European bank transfer. Membership in TUG supports the development of TeXLive, the major TeX distribution.

Donations may be directed towards individual projects:

TUG Bursary Fund: Assistance for attending annual TUG meetings.

CTAN: The Comprehensive TeX Archive Network—Central storage for TeX.

TeX Development Fund: Support for specific projects.

EduTeX: Teaching and using TeX in schools and universities.

GUST e-foundry fonts: Enhanced for math and additional language groups.

LaTeX Project: Modernizing the L^AT_EX core.

Libre Font Fund: Fonts, tools (FontForge), and distribution (the Open Font Library).

LuaTeX: Combining the pdfTeX engine and the Lua language.

MetaPost: Postscript graphics.

MacTeX: TeX for Mac.

PDF Accessibility: Modern PDF standards.

Other: Additional projects may be specified.

To make a contribution:

<https://www.tug.org/donate.html>

For country-specific TeX users groups:

<http://tug.org/usergroups.html>

For users of MiKTeX:

<https://miktex.org/donations.html>

1 Updates

The following is a summary of updates to l warp, highlighting new features and any special changes which must be made due to improvements or modifications in l warp itself.

For a detailed list of the most recent changes, see the end of the Change History on page 1080.

v0.78: Fixes for support files, alt tags, hyperlinks, and the 2019/10 L^AT_EX release.

- docs**
 - Docs: Improved documentation regarding package options. See section 8.1.
 - Fix to overwrite existing support files using new filecontents environment.

- packages**
 - breqn: Previously broken by the 2019/10 L^AT_EX update, but now working again.
 - graphics: Fix for \includegraphics alt tags.
 - babel-french: Fix for hyperlinks.
 - media9, movie15, multimedia: Fix for the 2019/10 L^AT_EX update.
 - accessibility: Added.

v0.77: Updates to fix recently-broken packages.

- booktabs: Updated to v1.6180339.
- chemformula: Updated to v4.15.

v0.76: MATHJAX, updates for L^AT_EX 2019/10 release.

- docs**
 - Docs: Expanded documentation regarding the use of multiple projects in the same directory. See section 5.17.

- MATHJAX**
 - MATHJAX: Updated to v2.7.6.
- packages**
 - xr: Updated to v5.05.
 - xr-hyper: Updated to v6.1.
 - Verified works as-is with xcite.
 - acro: Updated to v2.10.

- ⚠️ broken**
 - Currently broken in print mode by the 2019/10 L^AT_EX update, and waiting for fixes: breqn, grffile, multimedia, movie15.

v0.75: keyfloat, wrapfig

- packages**
 - \minipage: Fix for \linewidth.
 - keyfloat: Improved color control.
 - wrapfig: Fix for \linewidth.

v0.74: Docs, svg math, *lwarpmk*, HTML alt and title text, lyluatex

docs

- Added to the tutorial the section [What next?](#). See section [5.19](#).
- Added documentation about localization options. See section [7.1](#).
- Added documentation about accessibility options. See section [7.2](#).
- Renamed and updated HTML alt text macros:

 **HTML alt text changed names**

Old	New
(hard coded as “image”)	\ImageAltText
\mathimagename	\MathImageAltText
\pacakgediagramname	\PackageDiagramAltText

- Added \ImageAltText for the default HTML alt text for an image. See section [7.6](#).
- Added \ThisAltText, which may be used to assign a one-time HTML alt tag to the very next image generated by l warp, such as a lateximage, picture, tikzpicture, an image generated by various chemistry or engineering packages, or an svg math image. This macro also adds a title tag to a reference or hyperlink. See section [7.6](#).

svg math

- Adjusted \LateximageFontSize default from .75 to 1.
- Fix: Font control for svg math.

misc

- Fix: Ignores negative \hspace.
- Warning if SideTOCDepth < FileDepth.

lwarpmk

- *lwarpmk*: **lwarpmk clean** removes additional files.
- *lwarpmk*: **lwarpmk epstopdf** and **lwarpmk pdftosvg** now honor directories.

packages

- lyluatex: Split images by system or per fullpage, improved margins and scaling.
- Tested to work as-is with mathspec, unicode-math.

v0.73: \include, memoir, koma-script, caption, xy, datatool, music scores.

packages

- Fix for \include.
- Warning for a tabular inside a .
- \color: Added HTML support for rules and frames, but not inline text. Use \textcolor if possible.
- Improved many HTML tags, reducing *tidy* warnings. See Change History.
- memoir: Fixes for \frontmatter* and \mainmatter*. Added \book.
- koma-script: Fix for starred captions in the toc.
- caption: Fix for starred captions.
- datatool: Added pie, bar, and plot charts.
- threeparttable: Added measuredfigure.
- intopdf: Updated to v0.2.1.
- tocdata: Updated to v2.03.
- quotchap: Updated to v1.2.

- `veronotes`: Updated to v0.4.
- `backnaur`: Now uses SVG images. Updated to v3.1.
- `xy`: Fix for `\xybox`, improved `xy`, also now compatible with `qcircuit`.
- `fancyvrb`: Fix for label HTML tags.
- Added `stackengine`.

music

- Added `lyluatex`. (Music scores.)
- `musicography`: Updated to 2019/05/28. Added support for `lateximages`.

v0.72: Font control, `\multicolumn`, `xr` and `xr-hyper`.

⚠️ images

- Due to internal changes, images for inline SVG math and `lateximages` will have new hash values, and will have to be regenerated using

Enter ⇒ **`lwarpmk cleanimages`**

and

Enter ⇒ **`lwarpmk limages`**

packages

- Docs: Color-codes package names in the table of supported packages and features, table 2, according to each package's level of support by `lwarf`.
- `\multicolumn`: Fix for paragraph columns.
- `xr`, `xr-hyper`: Fixes for references, `\externaldocument`.
- `soulutf8`: Fix: Loads `soul` for emulation.
- `boxedminipage2e`: Added support for `lateximages`.
- `zhlineskip`: Updated to v1.0e.
- Added `fontaxes`, `slantsc`, `tabfigures`.
- Added `nfssext-cfr`, thus supporting `cfr-lm` and several other font packages.
- Added `backnaur`, `hypbmsec`, `minibox`, `pdfcrypt`, `shapepar`.

v0.71: Error handling, multimedia, tabular.

packages

- `tabular`: Added support for '*' columns. Fix for paragraph tags.
- `quotation`: Fix for HTML tag.
- Docs: Added a section about error conditions tested by `lwarf`. See section 13.1.
- `lwarpmk`: If file `lwarpmk.conf` is an older version, or the incorrect operating system, displays the print command to use to recompile.

multimedia

- `chemfig`: Updated for v1.4.
- `endfloat`: Updated for v2.7.
- `textpos`: Updated for v1.9.1.
- Added `media9`, `movie15`, `multimedia`.

v0.70: Error handling, MATHJAX, mathtools.

- Error handling for “Label(s) changed.” Refuses to `lwarpmk limages` until recompile first.
 - Fix: If Computer Modern font is used, ensures `cm-super` or `lmodern` is used.
 - Fixes for `\makebox`.
 - Fixes for `\parbox` inside a ``.
 - MATHJAX: Updated to v2.7.5. Loads the `autoload-all.js` extension. Added `\MathJaxFilename` to select custom scripts.
- packages**
- `textcomp`, `xunicode`: Fix for `\textinterrobang`.
 - `mhchem`: Works with MATHJAX. See section 327.
 - `changes`: Updated to v3.1.2.
 - Added `autonum`, `changefont`, `inputrc`, `mathtools`, `metalogox`.

v0.69: Error handling, many fixes, improved keyfloat / tocdata.

- Fix for HTML corruption of `lateximage` displays.
 - `\makebox`, `\framebox`: Fix for `(<width,height>)` arguments.
 - `fminipage`: Honors `\minipagewidth`.
- packages**
- `array`, `longtable`: Fix for `\tabularnewline`.
 - `tabularx`, `tabulary`: Fix to require the `array` package.
 - `supertabular`, `xtab`: Fix to clear caption after use.
 - `graphics`: Added a warning if used the `\includegraphics scale` option.
 - `multirow`: Added an error if didn't use `\mrowcell` or `\mcolrowcell` when using `\multirow` or `\multicolumnrow`.
 - `keyfloat`: Updated for v2.00, additional improvements.
 - Added `ctable`, `eqlist`, `eqparbox`, `ftcap`, `listliketab`, `minitoc`, `tocdata`, `topcapt`.

v0.68: Error handling, tabulars, footnotes.

- lwarpmk***
- `lwarpmk`: Improved error handling for image generation if compile was incomplete.
 - `tabular`: Fix for `\warpprintonly`.
- packages**
- `longtable`: Improved flexibility for `\endhead`, etc. Improved error reporting if `\endhead`, etc. incorrect for `l warp`.
 - `threeparttable`: Fix for caption type.
 - `hyperref`: Fix for options with braces.
 - `morefloats`: Fix to be loaded early for print output.
 - `listings`: Updated for v1.7.
 - Added `bigfoot`, `fnpara`, `footnotebackref`, `manyfoot`, `tablefootnote`, `threeparttablex`.
 - Added `layouts`, `niceframe`, `perpage`, `showtags`.
 - Prevented `alg`, `algorithmic`, `pdfcprot`, `fncylab`.

v0.67: Filename generation, symbol fonts.

- docs**
 - Documentation fix for <project>-images, <project>-images.txt.
 - Added discussion regarding section names. See section 8.4.
- filenames**
 - Added \FilenameNullify and \FilenameSimplify for filename generation. See section 8.4.
 - Core, textcomp, xunicode: Nullified additional symbols during filename generation.
- packages**
 - color: Fix for version number warnings.
 - Added academicicons, bbding, dingbat, eurosym, fontawesome, fontawesome5, marvosym, pifont, typicons.
 - Added changes, easyReview, fitbox, foreign, gloss, karnaugh-map, multicap, nomencl, notes, struktex, umoline, xfakebold.
 - Tested to work as-is with askmaps, curves, euro, karnaughmap, tikz-karnaugh.

v0.66: xr, multiple projects, image names/directory, HTML formatting

⚠ Reset the configuration

lateximage

⚠ existing projects

filenames

⚠ Possible filename changes

floats

lists, table notes

tabular

indexing

minipage

colors

HTML

docs

- Due to changes in *lwarpmk*, **recompile any existing project a single time using pdflatex *filename.tex*** or similar, after which *lwarpmk* may then be used with the new configuration files.
- Adds options ImagesDirectory and ImagesName to assign directory and name prefixes for lateximage images. The new defaults include the job-name, allowing the image directories for multiple projects to coexist.
- To reuse existing lateximage directories, add l warp options

```
\usepackage[
    ImagesDirectory={lateximages},
    ImagesName={lateximage-}
]{l warp}
```

If not reused, the existing lateximages directory and lateximages.txt file may be removed.

- Added \FilenameLimit to control the maximum length of the filenames generated by l warp.

- Improved filename generation when special characters or macros are used in section names.

- Fix for **lwarpmk cleanimages** with WINDOWS.

- Fixes for floats in the home page.

- Improved css for definition lists, table notes.

- tabular: Fixes for \par in column specifier, minipage inside tabular.

- Indexing: Fix for a long line of multiple entries.

- \minipagefullwidth: Fix for global changes.

- Added \UseMinipageWidths and \IgnoreMinipageWidths. See section 8.3.3.

- Improved \fbox, \fboxBlock, \fminipage to use current text color.

- Improved HTML output formatting.

- Added discussion regarding invalid HTML. See section 8.1.1.

- Added discussion regarding math in section names, `\imagegraphics scale` option. See section 6.

- Added discussion regarding international languages in section names. See section 8.14.

packages

- `caption`: Fix for options clash.
- `xr, xr-hyper`: Now compatible.
- `subcaption`: Improved horizontal spacing.
- `multicol`: Fix for minipage inside `multicols`.
- `multicolrule`: Updated for v1.2.
- `tocbasic`: Minor update.
- `acronym`: Fix for acronym in float caption.
- `kotexutf`: Patch with `pdflatex` and new `lwarp` labels.
- `extramarks, fancyhdr`: Updated for v3.10.
- `memoir`: Added docs regarding version numbers. See section 8.13.
- `zref`: No longer required.
- Added `ar, ed, indentfirst, nameauth, truncate`.
- Verified to work as-is with `changelog`.
- Prevented `colortab, epsf, hyper, picinpar, picins, sistyle, ucs`.

v0.65: css layout, alt tags, Japanese.

page layout

- Moved the sidetoc to the left side, allowing improved css for margin notes.
- Improved page layout css.

image alt tags

- `graphicx \includegraphics`: Added the `alt` key to assign an `alt` tag to an image. Default is “image”, assigned to pass validation.

duplicate HTML files

- Detects and causes an error if duplicate HTML file names are generated, caused by identical or similar sectioning names.

fixes

- Fix for `tabular*`.
- Fix for `tabular` border colors.
- Fixes `\quad, \enskip`, and figure captions to pass validation.

Japanese

- Added `ltj*` classes, `bounddvi, gentombow, lltext, plarydshln, plex, plectarydshln, plectcolortbl, pxatbegshi, pxeveryshi, pxftnright, pxjahyper, tascmac`.
- Verified to work with `plarray, plautopatch, plectarray, plextdelarray, pxgentombow, plsiunitx, pxpdfpages, pxpgfrcs, pxpgfmark`.

packages

- Added support for `fontspec \textsi` and `\sisshape`.
- Added `multicol`'s `\docolaction`.
- Added `embrac, footnoterange, multicolrule, versonotes`.

v0.64: Koma-Script, Japanese, Chinese.

- Japanese
 - Added `utarticle` and related classes.
 - Improved `ujarticle` and related classes.
- Chinese
 - Fix for `biblatex` with CTEX and other classes.
- Koma-Script
 - Fixes for `scrlayer`, `scrlayer-scrpage`.
 - `addlines`: Updated to v0.3.
 - Added `bsheaders`, `gmeometric`, `marginal`, `rmpage`, `scrpage2`.
- packages

v0.63: mdframed, Chinese, Japanese, Korean

- localization
 - Added `\linkhomename`: A user-definable name for the **Home** link.
 - Documented `\sidetocname`: A user-definable name for the sidetoc.
 - Fix: `\LinkHome` for print output.
- fixes
- optimizations
 - Moved package load checks to the `l warp` core to reduce the number of `l warp-*` files.
- packages
 - `mdframed`: Fix with `amsthm`, improved titles and font control. Improved rule widths.
- Chinese
 - Fixes for `xeCJK`.
 - Added `xpinyin`, `zhlineskip`.
 - Verified to work with `cjkpunct`, `upzhangsoku`, `zhspacing`.
- Japanese
 - Verified to work with `zxjatype`, `l uatexja`, `l uatexja-fontspec`.
 - Added `bxjsarticle` and related classes.
 - Added `ltjsarticle` and related classes.
 - Added `pLATEX`, `upLATEX`, `ujarticle` and related classes.
 - Prevented `utarticle` and related classes.
 - Prevented `bxckatype`.
- Korean
 - Verified to work with `kotex`, `xetexko`, `l uatexko`.

v0.62: MiK \bar{T} E \bar{X} docs, HTML title, CTEX, xeCJK, bitpattern.

- docs
 - Docs: Setting a UTF-8 locale. See section [9.8](#).
 - MiK \bar{T} E \bar{X} : Docs for *MiK \bar{T} E \bar{X} Console* and `miktex-poppler-bin`.
 - HTML subpage titles: Added `\HTMLTitleBeforeSection` and `\HTMLTitleAfterSection` to select whether the HTML `<title>` displays the website name before or after the section name. See section [7.6](#).
- MiK \bar{T} E \bar{X}
- HTML `<title>`
 - Fix for package options handling.
 - Fixes for horizontal white space between `fminipage`, `fcolorminipage`, `colorboxBlock`, `fcolorboxBlock`.
 - Logos: Fix for X \bar{T} E \bar{X} logo, improved css, made robust, improved search-engine optimization.
 - `\\\[$1]`: Additional HTML `
` if $$1 > 0$ pt.
 - Fixes for `\includgraphics` filename, and with `FormatWP`.
 - Fix: css for `\textup`.
- fixes

- Fix: Added `\sllshape`.
- Chinese packages**
- Added `ctex` package and related classes, `xeCJK`.
 - Prevented `CJK`, `CJKutf8` unless `xeCJK`, `ctex` are used.
 - `chemfig`: Docs for new macro `\polymerdelim`.
 - `asymptote`: Docs for compilation.
 - `chngpage`: Fix to load `l warp-changepage`.
 - `algorithm2e`: Fix with non-book classes.
 - `register`: Updated to v1.8.
 - `nicefrac`: Improved font control and css, honors nice and ugly.
 - `units`: Improved font control and css, honors tight and loose.
 - `xfrac`: Improved css.
 - `textcomp` and `xunicode`: Fix conflicts with `\textcircled`.
 - `ulem`: Improved compatibility with `CJKulem`, `lateximage`.
 - `MathJax` and `siunitx`: Removed inoperable extension.
 - Added `bitpattern`, `pdfcomment`, `pdfmarginpar`, `tram`, `unitsdef`, `xexchangebar`.
 - Added `musicography`, `octave`, `semantic-markup`.
 - Added `2in1`, `flippdf`, `notespages`, `rviewport`, `twoup`.

v0.61: Custom compilation, EPS-related packages, documentation, indexes.

- docs**
- Split index into multiple indexes.
 - Improved documentation regarding font selection. See section [7.4](#).
 - Added documentation regarding debugging options. See section [35](#).
 - Added documentation regarding HTML entities inside program listings. See section [8.2.1](#).
 - Added options to specify the shell commands to execute for `l warpmk print` and `l warpmk html`, allowing the use of `l warp` with `perltx`, `pythontex`, etc. If not specified, these are set automatically depending on the LATEX engine, `--shell-escape`, and `l warp` options. See section [9](#).
- custom compiling**

⚠ changed names

- Changed macro names to match `\displaymathother`, `\displaymathnormal`:

Old	New
<code>\StartDynamicMath</code>	<code>\inlinemathother</code>
<code>\StopDynamicMath</code>	<code>\inlinemathnormal</code>

- fixes**
- Fix: Paragraph tags in a `tabular`.
 - Fix: `supertabular` and `xtab` captions.
 - Fix: DVI LATEX `\includegraphics` EPS images.
 - Fix: `newfloat` lists.
 - Fix: css footnotes text align, minipage tabular and footnote margins.
- packages**
- Added `epsfig`, `psfrag`, `psfragx`, `pstool`.
 - Added `copyrightbox`, `pdfprivacy`, `thinsp`, `threadcol`, `uspace`.
 - Added `chkfloat`, `cmdtrack`, `dprogress`, `lua-visual-debug`, `refcheck`, `srltx`, `srctex`, `vpe`, `xbmks`.

v0.60: Fixes for longtable, listings.

- fixes
 - `longtable`, etc.: Fixes for slowdown and memory management for very long tables.
 - `listings`: Fix for HTML entities, and also when used inside a list.
 - `diagbox`: Fix for incorrect HTML par tags.

- packages
 - Added `2up`, `booklet`.
 - Added `bophook`, `draftfigure`, `fullminipage`, `grid-system`, `layaureo`.
 - Added `leading`, `widows-and-orphans`.
 - Added `fancytabs`, `thumb`, `thumbs`.

v0.59: DVI *latex*, MATHJAX, asymptote, pdftricks and pstricks, epstopdf, brqen.

⚠ Reset the configuration

- Due to changes in `lwarpmk`, **recompile any existing project a single time** using `pdflatex filename.tex` or similar, after which `lwarpmk` may then be used with the new configuration files.

- lwarpmk***
 - Added an error if `lwarpmk.conf`'s format has changed and the document must be recompiled.
 - Added a warning if the `lwarpmk.conf` configuration file appears to be for the wrong operating system, in case files are transferred between systems.
 - Added

`lwarpmk epstopdf <list-of-EPS-files>`

to quickly convert a document's EPS images to PDF or SVG. See section 8.8.

- DVI *latex***
 - Added support for DVI *latex*. See section 7.5.
- latexmk***
 - Fix for --shell-escape with *latexmk*.
- math**
 - Updated MathJax script to v2.7.4.
 - Fix: Mathjax chapter number removed from non-numeric tagged equations.
 - Added MathJax support for `nicefrac`, `units`.
 - Fix for `\[` and `\]` with `\displaymathnormal`.

- images**
 - Fix for `\includegraphics` filename expansion.
 - `\includegraphics` now works with `.pdf` and `.eps` filename extensions.

- packages
 - Moved `amsmath` out of the `l warp` core.
 - Fix for `chemformula \NMR`.
 - Added `asymptote`, `pdftricks`, `pstricks`, `pst-eps`.
 - Added `breqn`, `Slunits`.
 - Added `bxpapersize`, `canoniclayout`, `draftcopy`, `fnbreak`, `nccfancyhdr`.
 - Added `accsupp`, `axessibility`.
 - Added `xunicode`.
 - Improved and now supports `epstopdf`.
 - Tested to work as-is: `eepic`, `sepfootnotes`.
- docs
 - Added information about setting up a development version of `l warp`.

v0.58: Extensive improvements in indexing, glossaries. Adds PDF-inclusion packages.

⚠ Reset the configuration

- Due to changes in *lwarpmk*, **recompile any existing project a single time** using `pdflatex filename.tex` or similar, after which *lwarpmk* may then be used with the new configuration files.
- *lwarpmk*: Added the `-p` option to specify the project name.
- *lwarpmk*: Now uses *makeglossaries* for glossary generation, allowing the processing of multiple glossaries at once.
- Added lwarf option `GlossaryCmd` to specify the shell command used by `lwarpmk printglossary` and `lwarpmk htmglossary`. Defaults to `makeglossaries`.
- Docs: Extra indexing options. See section 8.6.14.
- Added support for *makeindex*. (Previously supported only *xindy*.) Also added indexing packages listed below.
- Added lwarf options `PrintIndexCmd`, `HTMLIndexCmd`, and `LatexmkIndexCmd` to specify shell commands used by `lwarpmk printindex`, `lwarpmk htmlindex`, and `latexmk`. May be preset with the `makeindex` or `xindy` lwarf options. See section 7.5.
- Added lwarf options `makeindex` and `xindy` to set `PrintIndexCmd`, `HTMLIndexCmd`, and `LatexmkIndexCmd` to sensible values for a typical single index. See section 7.5.
- Added lwarf option `makeindexStyle` to tell *lwarpmk* to use a custom style instead of *lwarf.ist*. See section 8.6.20.
- Fix for index entries with `\see`, `\seealso`, `\emph`, `\textbf`, etc.
- Replaced each `\csuse` with `\@nameuse` for improved error detection.
- Additional internal print/HTML macro selection improvements.
- Fix: `\printindex` finishes pending `\index` writes first.
- Fixes for *memoir*: `makeidx`, `ccaption`, multiple indexes, `\specialindex`.
- Fixes for *komascript*: Indexing improvements.
- Added `imakeidx`, `index`, `repeatindex`, `splitidx`.
- Added `attachfile`, `attachfile2`, `intopdf`, `pdfpages`, `pdfx`.
- Added `cases`.
- Tested to work as-is: `notes2bib`, `hvindex`.

v0.57: algorithm2e, float styles, tabular packages, internal improvements.

dynamic math

⚠ new name

- Added support for MathJax equations with `\footnote`, `\footnotemark`.
- Added `\StartDefiningMath` and `\StopDefiningMath` for use when defining macros in the preamble which contain \$. See section 8.7.7.
- Added `\inlinemathother` and `\inlinemathnormal` to delimit math expressions which depend on a variable condition such as a counter. Such expressions will not be hashed for reuse, and will be converted to SVG math images even when MathJax is enabled. See section 8.7.8.
- Renamed `\EndDefiningTabulars` to `\StopDefiningTabulars`.

- lateximage alt tags**
 - Improved localization for `lateximage` HTML alt tags. For SVG math images, the alt tag under some conditions will be set to `\MathImageAltText`, which defaults to `math image`. For packages, the alt tag is set using the package name followed by `\PackageDiagramAltText`, which defaults to `diagram`.
Ex:

$$(-xy- \text{ diagram})$$

See section [7.6](#).
 - Fix: Improved print/HTML macro selection.
 - misc. fixes**
 - Fix: `\href` text catcodes.
 - Fix: `\subref` text.
 - Fixes: Colored `\rule` and `\boxframe`.
 - packages**
 - `float, rotfloat`: Adds support for float styles `ruled` and `boxed`.
 - `float`: Fix: Do not create `\l@<type>` until `\listof` is used.
 - `marginnote`: Fix: Long optional argument.
 - `ellipsis`: Adds `\midwordellipsis`.
 - `breakurl`: Fix for text catcodes.
 - Added `algorithm2e, register, ltablex, xltabular, xellipsis, trimclip, errata, vowel, xpiano`.
 - Prevents `glossary`.
 - Tested to work as-is with `gauss, phonrule, piano, Slunits, tikzcodeblocks`.
- v0.56:** Shell escape, tabular packages.
- lwarfmk**
 - Added
`lwarfmk pdftosvg <list-of-PDF-files>`
 to quickly convert a document's PDF images to SVG, for use with HTML. See section [8.8](#).
 - Added support for `--shell-escape`. See section [7.3](#).
 - tabular**
 - Added support for `array w` and `W` columns.
 - Fix: `\multicolumn` parameter handling.
 - Added support for double `\hlines`, `\midrules`, and vertical rules.
 - Added support for `arydshln` dashed lines with `HTML tabular`, but reverts to plain rules for `lateximage` and `SVG math array`.
 - misc. fixes**
 - Fix: `\thinspace`.
 - Fix: `paralist` compact environments.
 - packages**
 - Added `parnotes, quoting, lua-check-hyphen, toccenter, underscore`.
 - Added `bibunits`.
 - Tested to work as-is with `babelbib, bodegraph, fast-diagram, nicematrix, structmech`.

v0.55: Various fixes.

- | | |
|------------|--|
| misc fixes | <ul style="list-style-type: none"> Fix: Extraneous space in file links, which also prevented <i>Calibre</i> EPUB conversions. Fix: Float optional argument regression. Fix: \ForceHTMLTOC with \phantomsection. Fix: Overfull boxes in lateximages. Fix: QED symbols in lateximage. |
| packages | <ul style="list-style-type: none"> koma-script: Fix: Figure with \centering, etc. Added clrdblpg. |

v0.54: Float \centering, improved image checks.

⚠ Reset the configuration

- Due to changes in *lwarpmk*, **recompile any existing project a single time using pdflatex filename.tex or similar**, after which *lwarpmk* may then be used with the new configuration files.

lwarpmk

- lwarpmk* limages checks for the presence of the HTML version of the document and valid image references before attempting to create the lateximages.
- lwarpmk*: Improved error message if configuration file does not exist.

BiBTeX

- Added documentation for avoiding error with BibTeX and \etalchar. See section 8.6.9.

polyglossia

- Added documentation regarding polyglossia. See section 8.15.4.

macros in section names

- Added documentation regarding the use of macros in section names. See section 8.1.

document encoding

⚠ New and revised encoding options

- Renamed and added package options:

Old Package Option	New Package Option
xdyFilename	xindyStyle
IndexLanguage	xindyLanguage
—	xindyCodepage
—	pdftotextEnc

Use these options along with inputenc or inputenx to process documents in an encoding other than UTF-8. See section 7.4.

- Floats now honor \centering, \raggedright, \raggedleft, and their ragged2e equivalents, when placed directly after:

```
\begin{floattype}
\centering
```

misc. fixes

- tikz: \pgfpicture, fit, align, font.
- ragged2e: \centering etc.
- hyperref: \hypertarget was creating duplicate of \label.
- hyperref: Active chars inside \hyperref, \hyperlink.
- hyperref: \ref inside \hyperlink caused a nested HTML link.
- glossaries: Fix when not using babel or polyglossia.

- `textcomp`: `\textperthousand`.
- L^AT_EX core verse environment: line spacing.
-  **packages**
- Removed `\citetitle`, adjusted `\attribution`.
- `memoir`: Minor update for v3.7g.
- Added `inputenx`, `bibunits`, `chngpage`, `forest`, `magaz`, `gridset`.
- Prevents loading `ae`, `aecc`, `t1enc`, and `wasysym`.

v0.53: Improved image checks.

- lwarpmk***
- `lwarpmk`: Added a warning about corrupted images due to the need to recompile the document one more time.
 - `lwarpmk`: Added the `lwarpmk cleanimages` command.
 - Added documentation for `lwarpmk cleanimages` and `lwarpmk pdftohtml`.

v0.52: Improved footnotes, SVG math.

- documentation**
- Improved install instructions regarding `l warp_baseline_marker.png`.
 - Added documentation regarding footnotes in section headings, and footnotes with `\VerbatimFootnotes` from `fancybox`, `fancyvrb`. See section 8.5.4.
 - Added documentation regarding font selection when using X_EL^AT_EX or L^Au_LAT_EX with `fontspec` and traditional font packages. See section 7.4.
- SVG math**
- Fix: Limit the number of background tasks when generating `lateximages`.
 - Added user-adjustable SVG math font scaling. See section 80.3.
 - Added warnings if `l warp_baseline_marker.png` is not present, or if `graphicx` or `graphics` is not loaded.
 - Improved `\ensuremath` hashing expansion.
 - Fix: `equation*` with `split`.
 - tabbing now works inside a `lateximage`. Use for math in tabbing.
- MathJax**
- Fix: MathJax script was not executing in some conditions.
 - Added `\CustomizeMathJax` to add custom functions. See section 8.7.
- footnotes**
- Fix: Footnote numbering when using `HTMLDebugComments`.
 - Fix: Footnote paragraph tags.
 - Fix: `FootnoteDepth` defaults to `\subsubsection`.
- misc. fixes**
- Fix: `\kill` in a `lateximage`.
 - Fix: `\FileDepth`, misc. others, when input encoding is not `utf8`.
 - Fix: `\texorpdfstring` in a section name.
- packages**
- `hyperref` emulation: Fix for #, %, &, ~, _ characters in URLs.
 - `fancybox`, `fancyvrb`: Initial support for `\VerbatimFootnotes`.
 - `nicefrac`: Added with fix for `\ensuremath`.
 - `graphicx`: Fix for option defaults. Added v1.1a/b options.
 - `endfloat`: Updated for v2.6.
 - `url`: Fixes for active characters.

v0.51: Improved svg math, added numerous chemistry packages.

documentation	<ul style="list-style-type: none"> Docs: Added Things to avoid. Docs: Added to Converting an existing document. Docs: Multiple authors and affiliations with custom classes. See section 8.6.1. Docs: tikz with matrices. See section 8.8.1.
SVG math	<ul style="list-style-type: none"> Improved svg math baseline. Improved svg math font and color. Faster svg math rendering. Improved support for display math containing complicated math objects, such as <code>tikz-cd</code>. See section 8.7.9. Fix: <code>\addcontentsline</code> inside svg math. Fix: SVG math containing an embedded <code>lateximage</code>.
MathJax	<ul style="list-style-type: none"> MathJax now handles <code>\ensuremath</code> in expressions.
misc. fixes	<ul style="list-style-type: none"> Fix: Added <code>alignat</code> environment. Fix: <code>afterpackage</code> no longer required, which conflicted with <code>scrlfile</code>. Fix: <code>titling</code> <code>\thanks</code> mark. Fix: <code>fancybox</code> improvements. Fix: <code>tikz</code> <code>\tikz</code> macro. (Previously only the <code>tikzpicture</code> environment worked.) Fix: <code>tikz</code> with optional argument.
packages	<ul style="list-style-type: none"> Added <code>mhchem</code>, <code>chemfig</code>, <code>chemformula</code>, <code>chemmacros</code>, <code>chemnum</code>, <code>chemgreek</code>, <code>epstopdf-base</code>, <code>grid</code>, <code>ltxgrid</code>.

v0.50: Improved svg math.

svg math	<ul style="list-style-type: none"> SVG math and other <code>lateximages</code> now are converted to SVG using parallel background tasks, utilizing all available CPU cores. Inline SVG math image file names now are MD5 hashes made from their source LATEX code. Identical inline math expressions, such as multiple instance of <code>\$x\$</code>, now share a single image file. This reduces the number of images to store, transmit, process, and display. Each image file is only converted to SVG a single time, and reused if it already exists. Display math and other forms of SVG image such as <code>picture</code> and <code>Tikz</code> still use individual image files which are recreated each time <code>lwarfmk limages</code> is run. Fixes: SVG math and/or <code>\underline</code> in a sectioning file name. Improved svg display math and tags. Improved svg math and <code>siunitx</code> <code>alt</code> tags. Improved <code>siunitx</code> units. Fix: <code>\ensuremath</code> with MathJax now creates a <code>lateximage</code>. Fix: <code>\centering</code>, etc. in svg math, <code>lateximage</code>, <code>Tikz</code>.
misc. fixes	<ul style="list-style-type: none"> Fix: Made various macros robust, additionally fixing <code>authblk</code>. Fix: <code>ntheorem</code> if neither standard nor <code>amsthm</code> selected.

- Fix: `listings`: Improved column alignment.
 - Fix: Load `fontspec` if necessary.
- packages**
- Added `xy`, `epstopdf`, `diagbox`, `pbox`, `bytefield`, `axodraw2`, `phfqt`, `schemata`, `dblfloatfix`, `nonfloat`, `morefloats`.

v0.49:

- tabular**
- Added `xcolor \rowcolors`.
 - Fix: `\noalign` inside a `tabular`.
- math**
- Fix: `\eqref` in a caption.
- misc fixes**
- Fix: Incorrect PDF font size changes caused occasional HTML corruption.
 - Fix: `printlen` changes are now grouped for HTML output.
- packages**
- Added `vwcol`, `verbbars`, `hyphenat`, `lineno`, `fnlineno`, `figsize`, `hypdestopt`, `pagegrid`, `pdfrender`, `luacolor`, `resizegather`.

v0.48:

- documentation**
- Added some documentation regarding converting an existing document.
See section 6.
- cleveref**
- Updated compatibility for new `cleveref` v0.21.
- tabular**
- Fix: Ignores optional tabular column arguments.
- minor updates**
- Added `\leftline`, `\centerline`, `\rightline`.
 - Lists have improved font control via `\makelabel`.
 - Print-mode `lateximage` now boxed to the natural width of its multiline contents.
 - `abstract` now allows an optional name, as required by some classes.
- math**
- Fix: Improved spacing, `\mbox`, and font sizes with SVG math, Tikz.
 - `siunitx`: Improved SVG math, fraction compatibility, color output.
- misc. fixes**
- Fix: LOF/LOT links.
 - Fix: Virtual page size grouping caused excessive PDF page breaks.
 - Fix: Parsing similar package names in a single `\usepackage`.
 - Fix: Adapts to classes without `\part`.
 - Fix: `\newline` in `\title` was causing `
` in window title.
 - Fix: `\maketitle` with `\cr`, `\crr`, `\noalign`, for `IEEEtran` class.
 - Fix: `xfrac` neutralized `BlockClass` and others.
 - Fix: `todonotes` and `luatodonotes`: Improved `\todototoc`.
- packages**
- Added `colortbl`, `chapterbib`, `acro`, `acronym`, `hypernat`, `hypcap`, `stfloats`, `vmargin`, `fancyheadings`.
 - `fancyref`: Now directly supported.

v0.47:

- math • Improved SVG math baseline and sizing.
 • Fixes: `svgmath` in captions, subcaptions, `\nameref`.
 • Fixes: Line wrap at hyphen in HTML output.
packages • Added `endheads`, `multitoc`, `sectionbreak`, `blowup`, `xurl`.

v0.46:

- ⚠ name change • `\PrintStack` changed to `\LWRPrintStack`.
misc. fixes • Fix: Empty lines between tabular rows.
 • Fix: Stack unnesting.
 • Fix: SVG math and `lateximages` in numerous situations.
 • Fix: Spaces in `\usepackage`.
 • Fix: Now allows MATHJAX inside `verse`.

v0.45:

- documentation • Improved *MiKTeX* install instructions.
 • Improved graphics and `epstopdf` instructions.
 • Updates to the [Introduction](#).
memoir • Added `memoir`, `memhfixc`. See section [8.13](#).
cross-references • Fix: Now allows underscores in labels.
 • Fix: `_` and `\<blank>` in section/file names.
math • Fix: Now allows MATHJAX inside tabbing.
bibliography • Fix: Bibliography `\em` names.
 • Added `cite`, `natbib`, `backref`. (Also works as-is with `biblatex`.)
misc. fixes • Fix: Empty lines between tabular rows.
 • Fix: “Improper `\prevdepth`” with `minipages`, lists.
 • Fix: Incorrect SVG math and `lateximages` with `subfig`.
 • Fix: `Lateximages` from incorrect pages with `Mathjax`.
 • Fix: Missing `sitetoc` if using `listings`.
 • Fix: Added an `array` emulation package.
packages • Added `subfigure`, `prettyref`, `hanging`, `midpage`, `flafter`, `fltrace`, `changebar`, `endfloat`, `continue`, `fwlw`, `turnthepage`, `footnpag`, `pagesel`, `textfit`, `titleref`.

v0.44:

- koma-script • Added koma-script classes (except `scrlltr2`, `scrjura`).
 • Added `scrextend`, `scrlayer`, `scrlayer-notecolumn`, `scrlayer-scrpage`, `scrhack`, `tocstyle`, `tocbasic`.
HTML title and author • Added `\HTMLTitle`. Fixed web page title if `\HTMLTitle` empty and no `\title` given and not using `titling` package.
 • Fixed web page author if `\HTMLAuthor` is empty and `\author` is not given.

- encodings**
 - If using `pdflatex`, automatically loads T1 and UTF-8 encodings. (Additional `fontenc` encodings may be loaded after `l warp`.)
- lists**
 - Added `list` and `trivlist` environments, `hang`.
- tabular**
 - Fix: `\multicolumn` alignment if formatting for a word processor.
 - Added `ltxtable`.
- math**
 - Fix: MATHJAX combined with `lateximages`.
 - `algorithmicx`: Improved comment symbol and floating.
- packages**
 - Completed `todonotes` and `luatodonotes`.
 - Added `todo`, `easy-todo`, `fixmetodonotes`, `fixme`.
 - Added `soulutf8`, `soulpos`, `cancel`.
 - Added `section`, `fancyref`, `ifoddpage`.
 - Added `preview`, `atbegshi`, `watermark`.
 - Improved `tocloft` `\newlistof` and `\newlistentry`.

v0.43:

- footnotes**
 - Docs: Reorganized HTML customization, added an HTML settings table. See section 7.6.
- sectioning**
 - Fix: Expansion in section name.
- tabular**
 - Fix: Ignore spaces in tabular column specification.
 - Fix: Tabular rules at bottom or when finishing incomplete rows.
 - Fix: `\multicolumn` at/bang/before/after specifications, trim, and vertical rules.
 - Fix: `supertabular` and `xtab` column misalignment.
- math**
 - Fix: `equation*`.
 - Fix: SVG math in a section name.
 - Fix: `\ref` and `\eqref` in SVG math.
- packages**
 - Added `todonotes` and `luatodonotes` (but only disabled).
 - Added `breakurl`.
 - `hyperref`: Fix: Several macros were made robust, `\Gauge` added.

v0.42:

- Support TEX!**
 - Added TEX development support page. (See page 2.)
- word-processor conversion**
 - Improved assistance for word-processor conversions when boolean `FormatWP` is set true. See section 11.
 - The boolean `FormatWordProcessor` has been renamed `FormatWP`.
 - The boolean `HTMLMarkFloats` has been renamed `WPMarkFloats`.
 - New booleans control whether to place additional marks around mini-pages, at the table of contents, at the LOF and LOT, and whether to print math as LATEX source for copy/paste into the *LibreOffice Writer TeXMaths* extension.
- ⚠ name change**
- ⚠ name change**

- Improved formatting for numerous objects. See section 11.

`tabbing`

- Add: tabbing environment.

`overpic`

- Add: `overpic` package. See section 362.

`math`

- Fix: Text copy/paste of $\mathcal{M}\mathcal{S}$ math environment numbers and names.

- Improved `\ensuremath`.

- MATHJAX with `siunitx`: Updated script and documentation.

`symbols`

- `textcomp`: Improved `\textinterrobangdown`.

- `realscripts`: Fix for subscripts in a `lateximage`.

`load order`

- `morewrites`: Enforces loading before `lwarp`.

v0.41:

`tabular`

- Added tabular vertical rules, subject to some limitations. See the rules section of section 8.10.1.

- Improved `booktabs`: Width and trim are honored.

⚠ `new syntax`

- Added `\mcolrowcell` for empty cells inside a `\multicolumnrow`. Use `\mcolrowcell` instead of `\mrowcell` for two-dimensional cells created by `\multicolumnrow`. Continue to use `\mrowcell` for empty cells in a `\multirow`. See section 341.2 on page 838.

- Fix: Unfinished tabular rows are automatically filled.

- Fix for tabular column specifiers while using `babel-french`. (`\NoAutoSpacing` is activated then nullified inside the tabular, due to a conflict with the tabular column parsing code.)

v0.40:

`graphics, graphicx`

- `graphics` and `graphicx` have been moved from the `lwarp` core, and are only loaded if requested with `\usepackage`.

`\includegraphics path`

- Improved `graphics` `\graphicspath` support. Multiple image directories may now be used. Refer to [.pdf files without a file extension](#) to allow the HTML version to use a `.svg`, `.png`, `.jpg`, or `.gif` version instead. See section 8.8.

- `grffile` is now directly supported instead of emulated.

- Fix for `bigdelim`, and improved documentation. See section 141.

- Improved `LATEX` and `textcomp` symbols.

- Fix for `LATEX` logos and `\InLineClass`, etc. inside a `lateximage`.

- Fix for `xltextra` with `X-LATEX`.

- Fixes for `tocbibind` with `\simplechapter`, etc.

- Fixes for `\multicolumnrow` and `\nullfonts` with older versions of `multirow` and `xparse`.

- Added `\underline`.

- Added `adjmulticol`.

- Added `cuted`, `midfloat`.

- Added `pfnote`, `fnpos`, `dblfnote`.

- Added `stabular`, `tbls`.

- Added `sectsty`, `anonchap`, `quotchap`.

`margins`

`columns`

`footnotes`

`tabular`

`sectioning`

v0.39:**title pages**

 \published and
 \subtitle

 load order

tabular**multi column/row cell**

 macros inside tabular

 tabular defined inside
 another environment

tabular**margins****page layout**

- Improved the titlepage HTML code, \thanks notes, and \maketitle. `titling` is no longer required, but is still supported. The \published and \subtitle fields are no longer provided, but \AddSubtitlePublished replicates them using `titling`. See section 66.8. `authblk` is added, and should be loaded before `titling`. See section 66.
- \multirow now supports the new optional vpos argument.
- Added \multicolumnrow for combined \multicolumn and \multirow. See section 341.2.
- Tabular special cases:
 - Added \TabularMacro to mark custom macros inside tabular data cells, avoiding row corruption. See section 8.10.1.
 - Added \ResumeTabular for use when a tabular environment is defined inside another environment. See section 8.10.1.
- Added supertabular, xtab, bigstrut, bigdelim.
- Added fullwidth.
- Added addlines, anysize, a4, a4wide, a5comb, textarea, zwpagelayout, typearea, ebook.

v0.38:**forced single-pass compile****starred sections****updated tutorial****packages****font size****page numbering****front & back matter**

- Added `lwarpmk print1` and `lwarpmk html1` actions to force a compile of the project a single time. Useful when multiple passes are not needed, or changes were not detected.
- Added \ForceHTMLPage and \ForceHTMLTOC to force a starred sectional unit onto its own HTML page and with its own TOC entry. See section 8.6.2.
- Modified the tutorial to use the new \ForceHTMLPage and \ForceHTMLTOC macros.
- Added appendix, tocbibind, fncychap, fix2col.
- Added relsize, scalefnt.
- Added realscripts, metalogo, xltxtra.
- Added grffile, romanbar.
- Added arabicfront, chappg, nonumonpart, nopageno, romanbarpagenumber.
- Docs: Improved description of the use of front/back matter. See section 8.6.
- Fix: color requests xcolor.
- Fix: \part for article class.

v0.37:**\include for HTML****latexmk****accents and symbols****babel-french**

- \include now maintains independent .aux files for HTML versions.
- comment, used by lwarp, now maintains independent cut files for print and HTML versions, helping latexmk to better know whether to recompile.
- Improved support for L^AT_EX accents, textcomp, siunitx symbols.
- Improved babel-french handling for load order and ~ tilde.

v0.36:

- Recorganized the documentation section regarding special cases and limitations. (Section 8)
- Improved source formatting.
- \fbox and related now use \fboxsep and \fboxrule.
- \makebox and \framebox now use width and position.
- \fcolorbox and related now work inside a lateximage.
- boxes and frames**
- babel-french: Improvements for French variants, load order, footnotes, ellipses.
- babel-french**
- footnotes
- Improved footnote numbering. lateximage footnotes now appear as regular footnotes to match the numbering of the print version. Also fixed a regression with MATHJAX.
- siunitx
- Improved siunitx units.
- Fix for filenames while using MATHJAX.
- Fix for \rule when xcolor is not loaded.
- Added transparent, upref.

v0.35: Fix: \textbf and related.

v0.34:**⚠ Optional arguments**

- BlockClass's optional argument has been moved in front of the mandatory argument:

BlockClass[style]{class} (NEW)

instead of:

BlockClass{class}[style] (OLD)

This change makes it more consistent with L^AT_EX standards, and avoids problems with space between arguments.

- Likewise, \InlineClass's optional argument now comes before the mandatory arguments:

\InlineClass[style]{class}{text}

spans with minipages

- Improved compatibility between spans, minipages, lists, frames, and math. Handles minipages and lists inside an HTML span, such as an \fbox containing a minipage, although with minimal HTML fomatting. See section 8.3.3. \fboxBlock is added to frame minipages, tables, and lists with full HTML formatting but no longer inline, and behaves as \fbox for print output. The fminipage environment is added for framed minipages, as an environment with full HTML formatting, and draws a framed minipage in print output. See section 8.3.5. \fbox and minipages now often work in svg math and lateximages. MATHJAX supports \fbox, but not \fboxBlock nor fminipage.

lateximage, svg math, tabular

- Improved compatibility between lateximage and minipage, \parbox, \makebox, \fbox, \framebox, \raisebox, \scalebox, \reflectbox, tabular, booktabs.

- Improved font control for lateximagees and svg math.

- Added the eqnarray environments.

- fancyvrb is no longer required (preloaded), but is still supported.

eqnarray**verbatim packages**

- Added `verbatim` and `moreverb`.
- framing packages
 - Added `fancybox`, `boxedminipage2e` and `shadow`.
- list packages
 - `enumitem` is no longer required, but is still supported.
 - Added `enumerate` and `paralist`.
 - `titleps` is no longer required, but is still supported.
 - Added `crop`.
 - Added `rotfloat`, `marginfit`, and several minor packages; see the change log.
- babel-french
 - Adds fixed-width HTML spaces around punctuation when using `babel-french`.
LuaTeX does not yet use the extra punctuation spacing.

v0.33:

- Tabular @ and ! columns now have their own HTML columns.
- & catcode changes are localized, perhaps causing errors about the tab alignment character &, so any definitions of macros or environments which themselves contain `tabular` and & must be enclosed within `\StartDefiningTabulars` and `\StopDefiningTabulars` (previously called `\EndDefiningTabulars`). See section 43. This change is not required for the routine use of tables, but only when a table is defined inside another macro or environment, and while also using the & character inside the definition. This may include the use inside conditional expressions.
- Several math environments were incorrectly placed inline. Also, for `amsmath` with SVG math, the `fleqn` option has been removed, resulting in improved spacing for aligned equations.
- Bug fixes; see the changelog.

v0.32: Bug fixes; no source changes needed:

- `lwarpmk` has been adjusted to work with the latest `luatex`.
- Spaces in the `\usepackage` and `\RequirePackage` package lists are now accepted and ignored.
- Fix for the `glossaries` package and `\glo@name`.

v0.31: Bug fix; no source changes needed:

- Improved compatibility with `keyfloat`, including the new `keywrap` environment.

v0.30:**⚠ l warp-newproject**

- `l warp-newproject` has been removed, and its functions have been combined with `l warp`.

To modify existing documents, remove from the document source:

```
\usepackage{l warp-newproject}
```

The `l warp` package now produces the configuration files during print output, and also accepts the option `lwarpmk` if desired.

- A number of macros related to HTML settings have been converted to options, and other macros and options have been renamed to create a consistent syntax:

⚠ HTML setup changes.

Old Macro	New Package Option
\HomeHTMLFileName	HomeHTMLFilename
\HTMLFileName	HTMLFilename
\useLatexmk	latexmk
\warpOSwindows	OSWindows
Old Package Option	New Package Option
lwarpmklang (new)	xindyLanguage xindyStyle
Old Macro	New Macro
\MetaLanguage	\HTMLLanguage
\HTMLauthor	\HTMLAuthor
\NewHTMLdescription	\HTMLDescription
\SetFirstPageTop	\HTMLFirstPageTop
\SetPageTop	\HTMLPageTop
\SetPageBottom	\HTMLPageBottom
\NewCSS	\CSSFilename

- Per the above changes, in existing documents, modify the package load of `lwarp`, such as:

```
\usepackage[
    HomeHTMLfilename=index,
    HTMLfilename={},
    xindyLanguage=english
]{lwarp}
```

- The file `lwarp_html.xdy` has been renamed `lwarp.xdy`. To update each document's project:
 1. Make the changes shown above.
 2. Recompile the document in print mode. This updates the project's configuration files, and also generates the new file `lwarp.xdy`.
 3. The old file `lwarp_html.xdy` may be deleted.
- The new `lwarp` package option `xindyStyle` may be used to tell `lwarpmk` to use a custom `.xdy` file instead of `lwarp.xdy`. See section 8.6.21.
- Improvements in index processing:
 - `xindy`'s language is now used for index processing as well as glossary.
 - Print mode without `latexmk` now uses `xindy` instead of `makeindex`.
 - `texindy/xindy` usage depends on `pdflatex` vs `xelatex`, `lualatex`.
 - For `pdflatex` and `texindy`, the `-C utf8` option is used. This is supported in modern distributions, but a customized `lwarpmk.lua` may need to be created for use with older distributions.

v0.29:

- Add: `lwarpmklang` option for `lwarp-newproject` and `lwarp`. Sets the language to use while processing the glossary. (As of v0.30, this has been changed to the `IndexLanguage` option.) (As of v0.54, this has been changed to the `xindyLanguage` option.)

- Fix: \includegraphics when no optional arguments.

v0.28:

- \HTMLAuthor {<*name*>} assigns HTML meta author if non-empty. Defaults to \theauthor.
- Boolean HTMLDebugComments controls whether HTML comments are added for closing <div>s, opening and closing sections, etc.
- Boolean FormatEPUB changes HTML output for easy EPUB conversion via an external program. Removes per-file headers, footers, and nav. Adds footnotes per chapter/section.
- Boolean FormatWordProcessor changes HTML output for easier conversion by a word processor. Removes headers and nav, prints footnotes per section, and also forces single-file output and turns off HTML debug comments. Name changed to FormatWP as of v0.42.
- Boolean HTMLMarkFloats adds text marks around floats only if the boolean FormatWordProcessor is true. These make it easier to identify float boundaries, which are to be manually converted to word-processor frames. Name changed to WPMarkFloats as of v0.42.
- Updated for the new MATHJAX CDN repository.
- Adds tabulary.
- Supports the options syntax for graphics.
- Improved index references, now pointing exactly to their target.
- Adds glossaries. *lwarpmk* is modified to add printglossary and htmlglossary actions.

2 Introduction

The `lwarp` project aims to allow a rich `LATEX` document to be converted to a reasonable `HTML5` interpretation, with only minor intervention on the user's part. No attempt has been made to force `LATEX` to provide for every `HTML`-related possibility, and `HTML` cannot exactly render every possible `LATEX` concept. Where compromise is necessary, it is desirable to allow the print output to remain typographically rich, and compromise only in the `HTML` conversion.

Several “modern” features of `HTML5`, `css3`, and `svg` are employed to allow a fairly feature-rich document without relying on the use of `JAVASCRIPT`. Limited testing on older browsers shows that these new features degrade gracefully.

`lwarp` is a native `LATEX` package, and operates by either patching or emulating various functions. Source-level compatibility is a major goal, but occasional user intervention is required in certain cases.

As a package running directly in `LATEX`, `lwarp` has some advantages over other methods of `HTML` conversion. `TEX` itself is still used, allowing a wider range of `TEX` trickery to be understood. `Lua` expressions are still available with `LuATEX`. Entire categories of `LATEX` packages work as-is when used with `lwarp`: definitions, file handling, utilities, internal data structures and calculations, specialized math-mode typesetting for various fields of science and engineering, and anything generating plain-text output. Blocks of `PDF` output may be automatically converted to `svg` images while using the same font and spacing as the original print document, directly supporting `Tikz` and `picture`. Numerous packages are easily adapted for `HTML` versions, either by loading and patching the originals, or by creating nullified or emulated replacements, and all without resorting to external programming. As a result, several hundred packages have already been adapted (table 2), and an uncounted number more work as-is.

Packages have been selected according to several criteria: perceived importance, popularity lists, recent CTAN updates, CTAN topics, mention in other packages, support by other `HTML` conversion methods, and from sample documents taken from public archives. These include some “obsolete” packages as well.¹

Assistance is also provided for modifying the `HTML` output to suit the creation of `EPUB` documents, and for modifying the `HTML` output to ease import into a word processor.

`pdflatex`, `xelatex`, or `lualatex` may be used, allowing `lwarp` to process the usual image formats. While generating `HTML` output, `svg` files are used in place of `PDF`. Other formats such as `PNG` and `JPG` are used as-is.

¹An amazing number of decades-old packages are still in use today.

SVG images may be used for math, and are also used for picture, Tikz, and similar environments. The SVG format has better browser and e-book support than MathML (as of this writing), while still allowing for high-quality display and printing of images (again, subject to potentially bug-ridden² browser support).

Furthermore, SVG images allow math to be presented with the same precise formatting as in the print version. Math is accompanied by <alt> tags holding the LATEX source for the expression, allowing it to be copy/pasted into other documents.³ Custom LATEX macros may be used as-is in math expressions, since the math is evaluated entirely inside LATEX. An MD5 hash is used to combine multiple instances of the same inline math expression into a single image file, which then needs to be converted to SVG only a single time.

The MATHJAX JavaScript display engine may be selected for math display instead of using SVG images. Subject to browser support and Internet access, MATHJAX allows an HTML page to display math without relying on a large number of external image files.⁴ lwarp maintains LATEX control for cross-referencing and equation numbering, and attempts to force MATHJAX to tag equations accordingly.

A *texlua* program called *lwarpmk* is used to process either the print or HTML version of the document. A few external utility programs are used to finish the conversion from a LATEX-generated PDF file which happens to have HTML5 tags, to a number of HTML5 plain-text files and accompanying images.

lwarp automatically generates the extra files necessary for the HTML conversion, such as css and .xdy files, and configuration files for the utility *lwarpmk*. Also included is a parallel version of the user's source document, <sourcename>-html.tex, which selects HTML output and then inputs the user's own source. This process allows both the printed and HTML versions to co-exist side-by-side, each with their own auxiliary files.

When requesting packages during HTML conversion, lwarp first looks to see if it has its own modified version to use instead of the standard LATEX version. These *lwarp-pagename.sty* files contain code used to emulate or replace functions for HTML output.

²FIREFOX has had an on-again/off-again bug for quite some time regarding printing svgs at high resolution.

³There seems to be some debate as to whether MathML is actually an improvement over LATEX for sharing math. The author has no particular opinion on the matter, except to say that in this case LATEX is much easier to implement!

⁴One SVG image file per math expression, except that duplicate inline math expressions are combined into a single file according to the MD5 hash function of its contents. A common scientific paper can easily include several thousand files, and in one case the MD5 hash cut the number of files in half and the rendering time by 30%.

2.1 Typesetting conventions

Font weight, family, and style are used to indicate various objects:

Table 1: Typesetting conventions

package	L ^A T _E X package.
<i>program</i>	Program's executable name.
option	Program or package option.
filename	File name in the operating system.
BRAND NAME	Proper name for a program, operating system, etc.
commands	Commands to be entered by the user.
code	Program code.
\macro	L ^A T _E X macro.
environment	L ^A T _E X environment.
counter	L ^A T _E X counter.
boolean	L ^A T _E X boolean.
<element>	HTML element.
attribute	HTML attribute.
User Interface	A user-interface item.
ACRO	Acronym.

2.2 Supported packages and features

Table 2 lists some of the various L^AT_EX features and packages which may be used.

Package names are colored according to their support level:

name: Supported as-is.

name: Modified to work with HTML output, and also as print output in svg math or `\teximage` environments.

name: Emulated for HTML output.

name: Ignored for HTML output, but provides source-level compatibility.

Table 2: L^AT_EX l warp package — Supported features

Category	Status and supported features.
Engines:	DVI L ^A T _E X, pdfL ^A T _E X, X _D L ^A T _E X, LuaL ^A T _E X, upL ^A T _E X
Compiling:	<i>latexmk</i> , <i>perltex</i> , <i>pythontex</i> , <i>make</i> , etc.
Classes:	article, book, report, scrartcl, scrbook, scrreprt, memoir, CJK-related as listed below.
Koma-script:	<i>scrextend</i> , <i>scrhack</i> , <i>scrlayer</i> . Others as listed below.
Memoir:	memhfixc
Languages:	<i>babel</i> , <i>polyglossia</i> , <i>cjkpunct</i> , <i>xeCJK</i> .
Chinese:	C _T E _X , <i>ctex</i> , <i>upzhkinsoku</i> , <i>xpinyin</i> , <i>zhlineskip</i> , <i>zhspacing</i> .
Japanese:	upL ^A T _E X, LuaT _E X-ja, gentombow, <i>lltjext</i> , <i>plarray</i> , <i>plarydshln</i> , <i>plautopatch</i> , <i>plex</i> , <i>plexarray</i> , <i>plexarydshln</i> , <i>plextcolortbl</i> , <i>plexdelarray</i> , <i>pxatbegshi</i> , <i>pxeveryshi</i> , <i>pxftnright</i> , <i>pxgentombow</i> , <i>pxjahyper</i> , <i>pxpdfpages</i> , <i>pxpgfrcs</i> , <i>pxpgfmark</i> , <i>tascmac</i> , <i>zxjatype</i> . <i>bxjsarticle</i> and related, <i>ltjsarticle</i> and related, <i>luatexja</i> , <i>luatexja-fontspec</i> , <i>ujarticle</i> and related, <i>utarticle</i> and related.
Korean:	<i>kotex</i> , <i>luatexko</i> , <i>xetexko</i> .

Page layout:	2in1, 2up, a4, a4wide, a5comb, addlines, anysize, atbegshi , blowup, booklet, bophook, bounddvi, bxpapersize, canoniclayout, changelayout , changepage , chngpage, clrdblpg, continue, draftcopy, draftfigure, draftwatermark, ebook, everyshi, fancyhdr , fancytabs, flippdf, fullminipage, fullpage, fwlw, geometry, gmeometric, grid, grid-system , gridset, layaureo, layout, layouts, leading, ltxgrid, nccfancyhdr, notespages, nowidow, pagegrid, pagesel, pdfcrypt, pdfprivacy, preview, ragged2e , rmpage, scrlayer-scrpage , scrpage2 , setspace , textarea, threadcol, thumb, thumbs, titleps, tocenter, turnthepage, twoup, typearea, underlin, vmargin, watermark, widows-and-orphans, zwpagelayout.
Sectioning:	Adds FileDepth for splitting the HTML output. Files may be numbered sequentially or named according to section name. Common short words and punctuation are removed from the file-names. anonchap , bsheaders , fncychap , hypbmsec , indentfirst , quotchap , section , sectionbreak , secdot , sectsty , titlesec .
Table of contents, figures, tables:	Supported, with hyperlinks. minitoc , multitoc , shorttoc , titletoc , tocbasic , tocbibind , tocdata , tocloft , tocstyle .
Title page:	\maketitle , titlepage , authblk , titling .
Front & back matter:	abstract , appendix .
Indexing:	makeindex and xindy are supported, with hyperlinks. hvindex , idxlayout , imakeidx , index , makeidx , repeatindex , splithidx .
Glossary:	gloss , glossaries and xindy , nomenc .
Bibliography:	babelbib , backref , biblatex , bibunits , chapterbib , cite , hypernat , natbib , notes2bib , showtags .
Cross-references:	bookmark , breakurl , cleveref , fancyref , hypdestopt , hyperref , perpage , prettyref , titleref , url , varioref , xcite , xr , xr-hyper , xurl .
Margin notes:	marginal , marginfit , marginfix , scrlayer-notecolumn , versonotes .

l warp Supported Functions — continued

Category	Status
Footnotes:	Adds FootnoteDepth to print footnotes at section breaks. <code>bigfoot</code> , <code>dblfnote</code> , <code>endheads</code> , <code>endnotes</code> , <code>fixfoot</code> , <code>fnbreak</code> , <code>fnptra</code> , <code>fnpos</code> , <code>footmisc</code> , <code>footnote</code> , <code>footnotebackref</code> , <code>footnoterange</code> , <code>footnpag</code> , <code>manyfoot</code> , <code>marginnote</code> , <code>nccfoots</code> , <code>pagenote</code> , <code>parnotes</code> , <code>pfnote</code> , <code>sepfootnotes</code> , <code>sidenotes</code> , <code>tablefootnote</code> .
Math:	Converted to SVG images with HTML <code><alt></code> tags containing the L ^A T _E X source for the math expression. MATHJAX supported as an alternative. <code>amsmath</code> : $\mathcal{A}\mathcal{M}\mathcal{S}$ environments are supported. User-defined macros are available during conversion, due to native L ^A T _E X processing.
Theorems:	Native L ^A T _E X theorems, <code>amsthm</code> , <code>ntheorem</code> , <code>theorem</code> .
Additional math:	Math fonts via SVG images, <code>amscd</code> , <code>autonum</code> , <code>backnaur</code> , <code>bm</code> , <code>braket</code> , <code>breqn</code> , <code>cases</code> , <code>delarray</code> , <code>guass</code> , <code>jkmath</code> , <code>mathspec</code> , <code>mathtools</code> , <code>nicematrix</code> , <code>pb-diagram</code> , <code>resizegather</code> , <code>unicode-math</code> , <code>xfakebold</code> , <code>xy</code> . Many others work as-is.
Display math with <code>\displaymathother</code> :	Complicated math objects in display math, such as <code>tikz-cd</code> , etc.
Units and fractions:	<code>nicefrac</code> , <code>Slunits</code> , <code>siunitx</code> , <code>units</code> , <code>unitsdef</code> , <code>xfrac</code> .
Floats:	Appear where declared. <code>capt-of</code> , <code>caption</code> , <code>cutwin</code> , <code>dblfloatfix</code> , <code>endfloat</code> , <code>fix2col</code> , <code>flafter</code> , <code>float</code> , <code>floatflt</code> , <code>floatrow</code> , <code>fltrace</code> , <code>ftcap</code> , <code>hypcap</code> , <code>keyfloat</code> , <code>morefloats</code> , <code>multicap</code> , <code>newfloat</code> , <code>nonfloat</code> , <code>placeins</code> , <code>rotfloat</code> , <code>stfloats</code> , <code>subcaption</code> , <code>subfig</code> , <code>subfigure</code> , <code>subfloat</code> , <code>topcaption</code> , <code>trivfloat</code> , <code>wrapfig</code> .
Tabular:	tabular environment, array, <code>arydshln</code> , <code>bigdelim</code> , <code>booktabs</code> , <code>colortbl</code> , <code>ctable</code> , <code>diagbox</code> , <code>longtable</code> , <code>ltablex</code> , <code>ltxtable</code> , <code>multirow</code> , <code>supertabular</code> , <code>tabularx</code> , <code>tabulary</code> , <code>threeparttable</code> , <code>threeparttablex</code> , <code>xltabular</code> , <code>xtab</code> .

l warp Supported Functions — continued

Category	Status
Graphics:	<code>graphics</code> and <code>graphicx</code> . <code>\includegraphics</code> supports <code>width</code> , <code>height</code> , <code>origin</code> , <code>angle</code> , and <code>scale</code> tags, and adds <code>class</code> . References to PDF files are changed to SVG, other image types are accepted as well. <code>\rotatebox</code> and <code>\scalebox</code> are supported as well as HTML can handle. <code>rotating</code> is emulated but all objects are unrotated. <code>picture</code> , <code>tikz</code> , and <code>xy</code> are converted to an SVG image. <code>asymptote</code> , <code>curves</code> , <code>datatool</code> , <code>eepic</code> , <code>epsfig</code> , <code>epstopdf</code> , <code>fancybox</code> , <code>fitbox</code> , <code>grffile</code> , <code>media9</code> , <code>movie15</code> , <code>multimedia</code> , <code>overpic</code> , <code>psfrag</code> , <code>psfragx</code> , <code>pst-eps</code> , <code>pstool</code> , <code>pstricks</code> , <code>rviewport</code> , <code>tikz-3dplot</code> .
<code>xcolor</code> :	Full package color names, any color models, and mixing. <code>\textcolor</code> , <code>\colorbox</code> , <code>\fcolorbox</code> . Enhanced for HTML compatibility.
Lists:	Standard L ^A T _E X environments, <code>enumerate</code> , <code>enumitem</code> , <code>eqlist</code> , <code>hang</code> , <code>listliketab</code> , <code>paralist</code> .
Environments:	Standard L ^A T _E X environments.
<code>minipage</code> , <code>\parbox</code> :	Some HTML5-imposed limitations. Nested minipages are supported. <code>eqparbox</code> , <code>minibox</code> , <code>pbox</code> , <code>shapepar</code> .
Quotations:	<code>copyrightbox</code> , <code>csquotes</code> , <code>epigraph</code> , <code>quoting</code> , <code>verse</code> .
Verbatim:	<code>fancyvrb</code> , <code>moreverb</code> , <code>shortvrb</code> , <code>verbatim</code> .
Frames:	<code>boxedminipage2e</code> , <code>fancybox</code> , <code>framed</code> , <code>mdframed</code> , <code>niceframe</code> , <code>shadow</code> , <code>verbbars</code> .
Multi-columns:	<code>adjmulticol</code> , <code>multicol</code> , <code>multicolrule</code> , <code>vwcol</code> .
Margins:	<code>fullwidth</code> , <code>hanging</code> , <code>midpage</code> .
Line numbering:	<code>fnlineno</code> , <code>lineno</code> .
Direct formatting:	<code>\emph</code> , <code>\textsuperscript</code> , <code>\textbf</code> , etc are supported. <code>\bfseries</code> , etc. are only supported in some cases. <code>cancel</code> , <code>ellipsis</code> , <code>embrac</code> , <code>enparen</code> , <code>hyphenat</code> , <code>lettrine</code> , <code>lips</code> , <code>lua-check-hyphen</code> , <code>luacolor</code> , <code>magaz</code> , <code>pdfrender</code> , <code>realscripts</code> , <code>relsize</code> , <code>scalefnt</code> , <code>soul</code> , <code>soulpos</code> , <code>soulutf8</code> , <code>stackengine</code> , <code>textfit</code> , <code>thinsp</code> , <code>trimclip</code> , <code>truncate</code> , <code>ulem</code> , <code>umoline</code> , <code>underscore</code> , <code>uspace</code> , <code>xellipsis</code> .
Acronyms:	<code>acro</code> , <code>acronym</code> .
Ordinals:	<code>engord</code> , <code>fmtcount</code> , <code>nth</code> .

l warp Supported Functions — continued

Category	Status
Text ligatures:	Ligatures for symbols are supported. Ligatures for f, q, t are intentionally turned off because many simpler browsers do not display them correctly. Modern full-featured browsers re-create these ligatures on-the-fly.
Horizontal space:	HTML output for thin-unbreakable, unbreakable, \enskip, \quad, \qquad, \hspace.
Rules:	\rule with width, height, raise, text color.
HTML reserved characters:	\&, \textless, and \textgreater are converted to HTML entities.
Fonts:	Used as-is. Appear in SVG math expressions or embedded image environments. <code>fontaxes</code> , <code>nfssext-cfr</code> , <code>slantsc</code> , <code>tabfigures</code> . Tested to work as-is: Special font macros in <code>cfr-lm</code> and others which use <code>nfssext-cfr</code> .
Symbols:	Native LATEX diacriticals, <code>academicons</code> , <code>bbding</code> , <code>chemgreek</code> , <code>dingbat</code> , <code>euro</code> , <code>eurosym</code> , <code>fontawesome</code> , <code>fontawesome5</code> , <code>gensymb</code> , <code>marvosym</code> , <code>metalogo</code> , <code>metalogox</code> , <code>pifont</code> , <code>textalpha</code> , <code>textcomp</code> , <code>textgreek</code> , <code>typicons</code> , <code>xunicode</code> .

Category	Status
Accessibility:	accessibility , accsupp, axessibility.
Debug:	chkfloat, cmdtrack, dprogress, lua-visual-debug, refcheck, srcltx, srctex, vpe, xbmks.
Working as-is:	Various utility, calculation, file, and text-only packages, such as calc , fileerr , somedefs , trace , xspace . Also, most math-only packages, including specialized typesetting for various fields of science and engineering.

3 Alternatives

Summarized below are several other ways to convert a L^AT_EX or other document to HTML. Where an existing L^AT_EX document is to be converted to HTML, lwarf may be a good choice. For new projects with a large number of documents, it may be worth investigating the alternatives before decided which path to take.

3.1 internet class

cls `internet` The closest to lwarf in design principle is the `internet` class by Andrew Stacey—an interesting project which directly produces several versions of markdown, and also HTML and EPUB. <https://github.com/loopspace/latex-to-internet>

3.2 TEX4HT

Prog `TeX4ht` <http://tug.org/tex4ht/>
Prog `htlatex`

This system uses native L^AT_EX processing to produce a DVI file containing special commands, and then uses additional post-processing for the HTML conversion by way of numerous configuration files. In some cases lwarf provides a better HTML conversion, and it supports a different set of packages. TeX4ht produces several other forms of output beyond HTML, including ODT and a direct path to EPUB, and is still being developed.

3.3 Translators

These systems use external programs to translate a subset of L^AT_EX syntax into HTML. Search for each on CTAN (<http://ctan.org>).

Prog	Hevea	H^Ev^Fa: http://hevea.inria.fr/ (not on CTAN)
Prog	TtH	T_TH: http://hutchinson.belmont.ma.us/tth/
Prog	GELLMU	GELLMU: http://www.albany.edu/~hammond/gellmu/
Prog	LaTeXML	L^ATeXML: http://dlmf.nist.gov/LaTeXML/
Prog	Plastex	PlasTeX: https://github.com/tiarno/plastex
Prog	LaTeX2HTML	L^ATeX2HTML: http://www.latex2html.org/ and http://ctan.org/pkg/latex2html .
Prog	TeX2page	TeX2page: http://ds26gte.github.io/tex2page/index.html

Finally, GladTeX may used to directly insert L^AT_EX math into HTML:

Prog `GladTeX` **GladTeX:** <http://humenda.github.io/GladTeX/>

3.4 ASCIIDOC and ASCIIDOCTOR

AsciiDoc is one of the most capable markup languages, providing enough features to produce the typical technical-writing document with cross-references, and it writes L^AT_EX and HTML.

Prog AsciiDoc **Asciidoc:** <http://asciidoc.org/> (More active.)

Prog AsciiDoctor **AsciiDoc:** <http://asciidoc.org/> (The original project.)

3.4.1 ASCIIDOCTOR-LATEX

The Asciidoctor-LaTeX project is developing additional L^AT_EX-related features.

Asciidoctor-LaTeX:

<http://www.noteshare.io/book/asciidoctor-latex-manual>

<https://github.com/asciidoctor/asciidoctor-latex>

3.5 PANDOC

Prog Pandoc A markup system which also reads and writes L^AT_EX and HTML.

Pandoc: <http://pandoc.org/>

(Watch for improvements in cross-references to figures and tables.)

3.6 Word processors

Prog Word It should be noted that the popular word processors have advanced through the years

in their abilities to represent math with a L^AT_EX-ish input syntax, unicode math fonts,

and high-quality output, and also generate HTML with varying success. See recent

developments in MICROSOFT® *Word*® and LIBREOFFICE™ *Writer*.

3.7 Commercial systems

Prog Adobe Likewise, several professional systems exist whose abilities have been advancing

in the areas of typesetting, cross-referencing, and HTML generation. See ADOBE® *FrameMaker*®, ADOBE *InDesign*®, and MADCAP *Flare*™.

Prog InDesign

Prog Flare

Prog Madcap

3.8 Comparisons

AsciiDoc, Pandoc, and various other markup languages typically have a syntax which tries to be natural and human-readable, but the use of advanced features tends to require many combinations of special characters, resulting in a complicated mess of

syntax. By contrast, L^AT_EX spells things out in readable words but takes longer to type, although integrated editors exist which can provide faster entry and a graphic user interface. For those functions which are covered by the typical markup language it is arguable that L^AT_EX is comparably easy to learn, while L^AT_EX provides many more advanced features where needed, along with a large number of pre-existing packages which provide solutions to numerous common tasks.

Text-based document-markup systems share some of the advantages of L^AT_EX vs. a typical word processor. Documents formats are stable. The documents themselves are portable, work well with revision control, do not crash or become corrupted, and are easily generated under program control. Formatting commands are visible, cross-referencing is automatic, and editing is responsive. Search/replace with regular expressions provides a powerful tool for the manipulation of both document contents and structure. Markup systems and some commercial systems allow printed output through a L^AT_EX back end, yielding high-quality results especially when the L^AT_EX template is adjusted, but they lose the ability to use L^AT_EX macros and other L^AT_EX source-document features.

The effort required to customize the output of each markup system varies. For print output, L^AT_EX configuration files are usually used. For HTML output, a css file will be available, but additional configuration may require editing some form of control file with a different syntax, such as XML. In the case of lwarp, css is used, and much HTML output is adjusted through the usual L^AT_EX optional macro parameters, but further customization may require patching L^AT_EX code.

The popular word processors and professional document systems each has a large base of after-market support including pre-designed styles and templates, and often include content-management systems for topic reuse.

4 Installation

Table 3 shows the tools which are used for the L^AT_EX to HTML conversion. In most cases, these will be available via the standard package-installation tools.

Detailed installation instructions follow.

Table 3: Required software programs

Provided by your L^AT_EX distribution:

From T_EXLive: <http://tug.org/texlive/>.

L^AT_EX: *pdflatex*, *xelatex*, or *lualatex*.

The l warp package: This package.

The *lwarpmk* utility: Provided along with this package. This should be an operating-system executable in the same way that *pdflatex* or *latexmk* is. It is possible to have the *l warp* package generate a local copy of *lwarpmk* called *lwarpmk.lua*. See table 4.

***luatex*:** Used by the *lwarpmk* program to simplify and automate document generation.

***xindy*:** The *xindy* program is used by *l warp* to create indexes. On a MiK^TE_X system this may have to be acquired separately, but it is part of the regular installer as of mid 2015.

***latexmk*:** Optionally used by *lwarpmk* to compile L^AT_EX code. On a MiK^TE_X system, *Perl* may need to be installed first.

***pdfcrop*:** Used to pull images out of the L^AT_EX PDF.

POPPLE_R PDF utilities:

***pdftotext*:** Used to convert PDF to text.

***pdfseparate*:** Used to pull images out of the L^AT_EX PDF.

***pdftocairo*:** Used to convert images to SVG.

These might be provided by your operating-system package manager, and MiK^TE_X provides *miktex-poppler-bin-** packages.

From POPPLER: poppler.freedesktop.org.

For MACOS®, see <https://brew.sh/>, install *Homebrew*, then

Enter ⇒ **brew install poppler**

For WINDOWS, see Mik^TE_X *miktex-poppler-bin-**, or:

<https://sourceforge.net/projects/poppler-win32/> and:

<http://blog.alivate.com.au/poppler-windows/>

***Perl*:**

This may be provided by your operating-system package manager, and may be required for some of the POPPLER PDF utilities.

strawberryperl.com (recommended), perl.org

Automatically downloaded from the internet as required:

MATHJAX: Optionally used to display math. From: mathjax.org

4.1 Installing the l warp package

There are several ways to install l warp. These are listed here with the preferred methods listed first:

Pre-installed: Try entering into a command line:

Enter ⇒ **kpsewhich l warp.sty**

If a path to l warp.sty is shown, then l warp is already installed and you may skip to the next section.

TEX Live: If using a TEX Live distribution, try installing via *tlmgr*:

Enter ⇒ **tlmgr install l warp**

MiKTeX:

1. For newer versions of MiKTeX, install or update l warp using the *MiKTeX Console* program.
2. For older versions of MiKTeX, to install l warp the first time, use the *MiKTeX Package Manager (Admin)*. To update l warp, use *MiKTeX Update (Admin)*.
3. Either way, also update the package *miktex-misc*, which will install and update the *lwarpmk* executable.

Operating-system package: The operating-system package manager may already have l warp, perhaps as part of a set of TEX-related packages.

CTAN TDS archive: l warp may be downloaded from the Comprehensive TEX Archive:

1. See <http://ctan.org/pkg/l warp> for the l warp package.
2. Download the TDS archive: l warp.tds.zip
3. Find the TEX local directory:

TEX Live:

Enter ⇒ **kpsewhich -var-value TEXMFLOCAL**

MiKTeX:

In the **Settings** window, **Roots** tab, look for a local TDS root.

This should be something like:

/usr/local/texlive/texmf-local/

4. Unpack the archive in the TDS local directory.
5. Renew the cache:

Enter ⇒ **mktexlsr**

— or —

Enter ⇒ **texhash**

Or, for Windows MiKTeX, start the program called *MiKTeX Settings (Admin)* and click on the button called **Refresh FNDB**.

CTAN .dtx and .ins files: Another form of TEX package is .dtx and .ins source files. These files are used to create the documentation and .sty files.

1. See <http://ctan.org/pkg/lwarp> for the l warp package.
2. Download the zip archive l warp.zip into your own l warp directory.
3. Unpack l warp.zip.
4. Locate the contents l warp.dtx and l warp.ins
5. Create the .sty files:
Enter ⇒ **pdflatex l warp.ins**
6. Create the documentation:

```
pdflatex l warp.dtx (several times)
makeindex -s gglo.ist -o l warp.gls l warp.glo
makeindex -s gind.ist l warp.idx
pdflatex l warp.dtx (several times)
```

7. Copy the .sty files somewhere such as the T E X Live local tree found in the previous CTAN TDS section, under the subdirectory:
`<texlocal>/tex/latex/local/l warp`
8. Copy l warp_baseline_marker.png and l warp_baseline_marker.eps to the same place as the .sty files.
9. Copy the documentation l warp.pdf to a source directory in the local tree, such as:
`<texlocal>/doc/local/l warp`
10. Renew the cache:
Enter ⇒ **mktexlsr**
— or —
Enter ⇒ **texhash**
Or, for WINDOWS MiK T E X, start the program called *MiK T e X Settings (Admin)* and click on the button called **Refresh FNDB**.
11. See section 4.2.1 to generate your local copy of l warpmk.
12. Once the local version of l warpmk.lua is installed, it may be made available system-wide as per section 4.2.

Project-local CTAN .dtx and .ins files: The .dtx and .ins files may be downloaded to a project directory, then compiled right there, alongside the document source files. The resultant *.sty and l warpmk.lua files may be used as-is, so long as they are in the same directory as the document source. The files l warp_baseline_marker.png and l warp_baseline_marker.eps must also be copied as well. This approach is especially useful if you would like to temporarily test l warp before deciding whether to permanently install it.

Just testing!

4.2 Installing the l warpmk utility

(Note: If l warpmk is not already installed, it is easiest to use a local copy instead of installing it system-wide. See section 4.2.1.)

After the l warp package is installed, you may need to setup the l warpmk utility:

1. At a command line, try executing **lwarpmk**. If the *lwarpmk* help message appears, then *lwarpmk* is already set up. If not, it is easiest to generate and use a local copy. See section 4.2.1.
2. For MiK_TE_X, try updating the *miktex-misc* package. This may install the *lwarpmk* executable for you.

Otherwise, continue with the following:

3. Locate the file *lwarpmk.lua*, which should be in the *scripts* directory of the TDS tree. On a *TEX Live* or MiK_TE_X system you may use

Enter ⇒ **kpsewhich lwarpmk.lua**

(If the file is not found, you may also generate a local copy and use it instead. See section 4.2.1.)

4. Create *lwarpmk*:

Unix: Create a symbolic link and make it executable:

- (a) Locate the *TEX Live* binaries:

Enter ⇒ **kpsewhich -var-value TEXMFROOT**

This will be something like:

/usr/local/texlive/<year>

The binaries are then located in the *bin/<arch>* directory under the root:

/usr/local/texlive/<year>/bin/<architecture>/

In this directory you will find programs such as *pdflatex* and *makeindex*.

- (b) In the binaries directory, create a new symbolic link from the binaries directory to *lwarpmk.lua*:

Enter ⇒ **ln -s <pathtolwarpmk.lua> lwarpmk**

- (c) Make the link executable:

Enter ⇒ **chmod 0755 lwarpmk**

WINDOWS *TEX Live*: Create a new *lwarpmk.exe* file:

- (a) Locate the *TEX Live* binaries as shown above for UNIX.

- (b) In the binaries directory, make a *copy* of *runscript.exe* and call it *lwarpmk.exe*. This will call the *copy* of *lwarpmk.lua* which is in the *scripts* directory of the distribution.

WINDOWS MiK_TE_X: Create a new *lwarpmk.bat* file:

- (a) Locate the MiK_TE_X binaries. These will be in a directory such as:

C:\Program Files\MiK_TE_X 2.9\miktex\bin\x64

In this directory you will find programs such as *pdflatex.exe* and *makeindex.exe*.

- (b) Create a new file named *lwarpmk.bat* containing:

*texlua "C:\Program Files\MiK_TE_X 2.9\scripts\lwarpmk.lua" %**

This will call the *copy* of *lwarpmk.lua* which is in the *scripts* directory of the distribution.

4.2.1 Using a local copy of *lwarpmk*

It is also possible to use a local version of *lwarpmk*:

1. When compiling the tutorial in section 5, use the `lwarpmk` option for the `l warp` package:

```
\usepackage[lwarpmk]{l warp}
```

2. When the tutorial is compiled with `pdflatex`, the file `lwarpmk.lua` will be generated along with the other configuration files.
3. `lwarpmk.lua` may be used for this project:

Unix:

- (a) Make `lwarpmk.lua` executable:

Enter ⇒ `chmod 0755 lwarpmk.lua`

- (b) Compile documents with

Enter ⇒ `./lwarpmk.lua html`

Enter ⇒ `./lwarpmk.lua print`

etc.

- (c) It may be useful to rename or link to a version without the `.lua` suffix.

WINDOWS:

Compile documents with either of the following, depending on which command shell is being used:

Enter ⇒ `texlua lwarpmk.lua html`

Enter ⇒ `texlua lwarpmk.lua print`

etc.

Or:

Enter ⇒ `lwarpmk html`

Enter ⇒ `lwarpmk print`

etc.

4.3 Installing additional utilities

To test for the existence of the additional utilities:

Enter the following in a command line. If each programs' version is displayed, then that utility is already installed. See table 3 on page 75.

```
Enter ⇒ luatex --version  
Enter ⇒ xindy --version  
Enter ⇒ latexmk --version  
Enter ⇒ perl --version  
Enter ⇒ pdfcrop --version  
Enter ⇒ pdftotext -v  
Enter ⇒ pdfseparate --version  
Enter ⇒ pdftocairo -v
```

To install *xindy*, *latexmk*, and *pdfcrop*:

The TeX utilities *xindy*, *latexmk*, and *pdfcrop* may be installed in *TexLive* with *tlmgr*, installed by *MiKTeX*, provided by your operating system's package manager, or downloaded from the *CTAN* archive:

<http://ctan.org/pkg/xindy>
<http://ctan.org/pkg/latexmk>
<http://ctan.org/pkg/pdfcrop>

Prog [requirement] pdftotext **To install the POPPLER utilities to a UNIX/LINUX system:**

The tools from the POPPLER project should be provided by your operating system's package manager.

To install the POPPLER utilities to a MACOS machine:

1. Install *Homebrew* from <https://brew.sh/>:

```
/usr/bin/ruby -e "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/master/install)"
```

2. Install the POPPLER utilities:

Enter ⇒ **brew install poppler**

To install the POPPLER utilities to a WINDOWS machine:

If using MikTEX, install a *miktex-poppler-bin-** package. Otherwise:

1. See table 3 on page 75.
2. Download and extract the POPPLER utilities *pdftotext*, *pdfseparate*, and *pdfsepate* to a directory, such as Poppler.
3. In the **Start** window, type "Path" to search for results related to Path. Or, open the control panel and search for "Path".
4. Choose **Edit the system environment variables** in the control panel.
5. Choose the **Environment Variables** button.
6. Choose the **Path** variable, then the **Edit** button.
7. Choose the **New** button to make an additional entry.
8. Enter the bin directory of the POPPLER utilities, such as:
 C:\Users\<myname>\Desktop\Poppler\poppler-0.5_x86\poppler-0.5\bin
 Be sure to include \bin.
9. Click **Ok** when done.

Prog [requirement] perl **To install PERL to a WINDOWS machine:**

1. Download and install a version of PERL, such as STRAWBERRY PERL, to a directory without a space in its name, such as C:\Strawberry.
2. Edit the **Path** as seen above for the POPPLER utilities.
3. Enter the bin directory of the *perl* utility, such as:
 C:\Strawberry\perl\bin
 Be sure to include \bin.
4. Click **Ok** when done.

Any utilities installed by hand must be added to the PATH.

5 Tutorial

This section shows an example of how to create an l warp document.

Need help?

See the [General Index](#) for “how-to”, and the [Troubleshooting Index](#) if something doesn’t work. A [Troubleshooting](#) section is also available. The [Index of Objects](#) contains automated entries for each package, macro, environment, counter, boolean, and other objects; individually and also sorted by category.

5.1 Starting a new project

1. Create a new project directory called `tutorial`.
- File `tutorial.tex`
2. Inside the `tutorial` directory, create a new file called `tutorial.tex`. This may be done several ways:

Copy from the documentation PDF:

A listing is in fig. 1, which may be copied/pasted from the figure directly into your own editor, depending on the quality of the PDF viewer and editor, or:

Copy from the l warp documentation directory:

Another copy may be found by entering into a command line:

Enter ⇒ `texdoc -l l warp_tutorial.txt`

This should be in the `doc/latex/l warp/` directory along with this PDF documentation. Copy `l warp_tutorial.txt` directly into your `tutorial` directory, renamed as `tutorial.tex`.

⚠ **Bad formatting!**

When using Windows, use an editor other than NOTEPAD, since NOTEPAD does not accept the end-of-line from a UNIX text file.

3. Compile the project:

Enter ⇒ `pdflatex tutorial.tex`
(several times)

(`xelatex` or `lualatex` may be used as well. l warp also supports DVI `latex` for use with .eps images.)
4. View the resulting `tutorial.pdf` with a PDF viewer.

A number of new files are created when `tutorial.tex` is compiled, as shown in table 4. These files are created by the l warp package.

(Two of the new files are configuration files for the helper program `l warpmk`. Whenever a print version of the document is created, the configuration files for `l warpmk` are updated to record the operating system, LATEX engine (`latex`, `pdflatex`, `xelatex`, or `lualatex`), the filenames of the source code and HTML output, and whether the additional helper program `latexmk` will be used to compile the document.)

Figure 1: tutorial.tex listing

Note: There are two pages!

```
% Save this as tutorial.tex for the lwarp package tutorial.

\documentclass{book}

\section{A section}

This is some text which is indexed.\index{Some text.}

\subsection{A subsection}

See \cref{fig:withtext}.

\begin{figure}\begin{center}
\fbox{\textcolor{blue!50!green}{Text in a figure.}}
\caption{A figure with text\label{fig:withtext}}
\end{center}\end{figure}

\section{Some math}

Inline math: $r = r_0 + vt - \frac{1}{2}at^2$  

followed by display math:  

\begin{equation}
a^2 + b^2 = c^2
\end{equation}

\begin{warpprint} % For print output ...
\cleardoublepage % ... a common method to place index entry into TOC.
\phantomsection
\addcontentsline{toc}{chapter}{\indexname}
\end{warpprint}
\ForceHTMLPage % HTML index will be on its own page.
\ForceHTMLTOC % HTML index will have its own toc entry.
\printindex

\end{document}

```

Table 4: Configuration files created by print version

tutorial.pdf: The PDF output from L^AT_EX. The print version of the document.

tutorial_html.tex: A small .tex file used to create a parallel HTML version of the document, which co-exists with usual the PDF version, and which will have its own auxiliary files. In this way, both PDF and HTML documents may co-exist side-by-side.

Auxiliary files: The usual L^AT_EX files .aux, .log, .out, .toc, .lof, .idx. When an HTML version of the document is created, _html versions of the auxiliary files will also be generated.

lwarpmk.conf: A configuration file for *lwarpmk*, which is used to automate the compilation of PDF or HTML versions of the document.

tutorial.lwarpmkconf: Another configuration file used by *lwarpmk*, which is only useful if you wish to have several projects residing in the same directory.

.css files: lwarp.css, lwarp_formal.css, lwarp_sagebrush.css These files are standard for lwarp, and are not meant to be modified by the user.

sample_project.css: An example of a user-customized css file, which may be used for project-specific changes to the lwarp defaults.

lwarp.ist: Used by lwarp while creating an index using *makeindex*. This file should not be modified by the user. A custom file may be used instead, if necessary.

lwarp.xdy: Used by lwarp while creating an index using *xindy*. This file should not be modified by the user. A custom file may be used instead, if necessary.

lwarp_one_limage.txt: For WINDOWS only. Used to process SVG images in the background. Copied to lwarp_one_limage.cmd when images are generated.

lwarp_mathjax.txt: Inserted into the HTML files when MATHJAX is used to display math. This file should not be modified by the user.

comment.cut: A temporary file used by lwarp to conditionally process blocks of text. This file may be ignored.

When the *lwarpmk* option is given to the *lwarp* package:

lwarpmk.lua: A local copy of the *lwarpmk* utility.

On UNIX-related operating systems this file must be made executable:

```
chmod u+x lwarpmk.lua
```

This may be useful to have to archive with a project for future use.

5.2 Compiling the print version with *lwarpmk*

The *lwarpmk* utility program is used to compile either the printed or the HTML version of the document.

`lwarpmk print` is used to recompile a printed version of the document.

1. Re-compile the print version:

Enter ⇒ **`lwarpmk print`**

lwarpmk prints an introduction then checks to see if the document must be recompiled. If it seems that the files are up-to-date, then *lwarpmk* informs you of that fact and then exits.

2. Make a small change in the original document, such as adding a space character.
3. Recompile again.

Enter ⇒ **`lwarpmk print`**

The document is recompiled when a change is seen in the source. Several compilations may be necessary to resolve cross-references.

4. Force a recompile to occur.

Enter ⇒ **`lwarpmk again`**

Enter ⇒ **`lwarpmk print`**

lwarpmk again updates the date code for the file, triggering a recompile the next time the document is made.⁵

5. Process the index.⁶ ⁷

Enter ⇒ **`lwarpmk printindex`**

6. Recompile again to include the index.

Enter ⇒ **`lwarpmk print`**

7. To force a single recompile when needed, even if no changes were detected:

Enter ⇒ **`lwarpmk print1`**

Note that the HTML customization commands are ignored while making the print version.

⁵Although, when using the utility *latexpmk* (introduced later), the changed date is ignored and an actual change in contents must occur to cause a recompile.

⁶The command `lwarpmk printglossary` is also available to process a glossary produced with the *glossaries* package. See section 8.6.12.

⁷Also see section 8.6.15 for index options.

5.3 Compiling the HTML version with *lwarpmk*

`lwarpmk html` is used to recompile an HTML version of the document.

1. Compile the HTML version:

Enter ⇒ `lwarpmk html`

- (a) *lwarpmk* uses L^AT_EX to process `tutorial_html.tex` to create `tutorial_html.pdf`.
- (b) *pdftotext* is then used to convert to the file `tutorial_html.html`. This file is a plain-text file containing HTML tags and content for the entire document.
- (c) *lwarpmk* manually splits `tutorial_html.html` into individual HTML files according to the HTML settings. For this tutorial, the result is `tutorial.html` (the home page), along with `First-chapter.html`⁸, `Some-math.html`, and the document's index in `_Index.html`.⁹

2. View the HTML page in a web browser.

Open the file `tutorial.html` in a web browser.

math

Note that math is still displayed as its alt tag, which is the plain-text L^AT_EX source, until the images of the math expressions have been generated. Math may be displayed as SVG images or by a MATHJAX script, as seen in sections 5.4 and 5.5.

3. Force a recompile:

Enter ⇒ `lwarpmk again`

Enter ⇒ `lwarpmk html`

Enter ⇒ `lwarpmk print`

4. Process the HTML index and recompile:¹⁰¹¹

Enter ⇒ `lwarpmk htmlindex`

Enter ⇒ `lwarpmk html`

`_Index.html` is updated for the new L^AT_EX index.

5. Reload the web page to see the added index.

6. To force a single recompile when needed, even if no changes were detected:

Enter ⇒ `lwarpmk html1`

⁸`First-chapter.html` also contains the first section, even though the second section is its own HTML page. This behavior is controlled by the boolean `CombineHigherDepths`.

⁹`index.html` is commonly used as a homepage, so the document index is in `_Index.html`.

¹⁰The command `lwarpmk htmlglossary` is also available to process a glossary produced with the `glossaries` package. See section 8.6.12.

¹¹Also see section 8.6.15 for index options.

5.4 Generating the svg images

math as svg images By default lwarf represents math as svg images, with the L^AT_EX source included in alt attributes. In this way, the math is displayed as it was drawn by L^AT_EX, and the L^AT_EX source may be copied and pasted into other documents.

picture and Tikz lwarf uses the same mechanism for picture and Tikz environments.

1. Create the svg images:

Enter ⇒ **lwarpmk limages**

Enter ⇒ **lwarpmk html**

2. Move to the tutorial's HTML math page and reload the document in the browser.
3. The math images are displayed using the same font and formatting as the printed version.
4. Copy/paste a math expression into a text editor to see the L^AT_EX source.

⚠️ adding/removing When a math expression, picture, or Tikz environment is added or removed, the svg images must be re-created by entering **lwarpmk limages** to maintain the proper image-file associations. Inline svg math may be hashed and thus not need to be recreated, but display math and objects such as Tikz may move to new image numbers when the document is changed.

recompile first Before attempting to create the svg image files, *lwarpmk* verifies that the HTML version of the document exists and has correct internal image references.¹² If it is necessary to recompile the document's HTML version one more time, *lwarpmk* usually will inform the user with an error message, but there are some conditions which cannot be detected, so the user should watch for the L^AT_EX recompile warnings.

⚠️ HTML instead of images If HTML appears where an svg image should be, recompile the document one more time to get the page numbers back in sync, then remake the images one more time.

⚠️ page counter Incorrect svg images will also occur if the document changes the page counter:

```
\setcounter{page}{<value>}
```

The page counter must *not* be adjusted by the user.

Expressing math as svg images has the advantage of representing the math exactly as L^AT_EX would, but has the disadvantage of requiring an individual file for each math expression. For inline math, and some other objects, lwarf uses an MD5 hash on its L^AT_EX source to combine multiple instances of identical inline expressions into a single image file, but display math and other environments such as picture and Tikz require one image file each. For a document with a large amount of math, see section 5.5 to use MATHJAX instead.

¹²This becomes important when dealing with a document containing thousands of images.

5.5 Using MATHJAX for math

[math with MATHJAX](#) Math may also be represented using the MATHJAX JAVASCRIPT project.

1. In the tutorial's source code, uncomment the `mathjax` package option for `lwarf`:

```
mathjax, % Use MathJax to display math.
```

2. Recompile

```
Enter ⇒ lwarfmk html
```

3. Reload the math page.

⚠ MATHJAX requirements

MATHJAX requires web access unless a local copy of MATHJAX is available, and it also requires that JAVASCRIPT is enabled for the web page. The math is rendered by MATHJAX. Right-click on math to see several options for rendering, and for copying the L^AT_EX source.

While using MATHJAX has many advantages, it may not be able to represent complex expressions or spacing adjustments as well as L^AT_EX, and it may not support some math-related packages.

5.6 Changing the css style

For a formal css style, add to the preamble:

```
\usepackage{lwarp}
...
\CSSFilename{lwarp_formal.css}
...
\begin{document}
```

For a modern css style, `lwarp_sagebrush.css` is also provided:

```
\CSSFilename{lwarp_sagebrush.css}
```

See section [7.7](#) for more information about modifying the css styling of the document.

5.7 Customizing the HTML output

A number of settings may be made to control the HTML output, including filename generation, automatic compilation, math output, document splitting, meta data, and page headers and footers.

See section [7.6](#) for more information.

5.8 Using *latexmk*

latexmk is a L^AT_EX utility used to monitor changes in source files and recompile as needed.

1. In the tutorial's source code uncomment the `latexmk` option for the `lwarp` package:

`latexmk, % Use latexmk to compile.`

2. Recompile the printed version of the document.

Enter ⇒ **`lwarpmk print`**

`lwarp` updates its own configuration files (`lwarpmk.conf` and `tutorial.lwarpmkconf`) whenever the printed version of the document is compiled. These configuration files remember that `lwarpmk` should use `latexmk` to compile the document.

3. Recompile the document.

Enter ⇒ **`lwarpmk print`**

and/or

Enter ⇒ **`lwarpmk html`**

Changes are detected by comparing checksums rather than modification times, so `lwarpmk` again will not trigger a recompile, but `latexmk` has a much better awareness of changes than the `lwarpmk` utility does and it is likely to correctly know when to recompile. A recompile may be forced by making a small change to the source, and a single recompile may be forced with:

Enter ⇒ **`lwarpmk print1`**

and/or

Enter ⇒ **`lwarpmk html1`**

forced single-pass recompile

5.9 Using X_ELATEX or LuaLATEX

X_ELATEX or LuaLATEX may be used instead of LATEX.

1. Remove the auxiliary files for the project:

Enter ⇒ **lwarfmk cleanall**

2. Use *xelatex* or *lualatex* to compile the printed version a single time.

Enter ⇒ **xelatex tutorial.tex**

-or-

Enter ⇒ **lualatex tutorial.tex**

When the compile occurs, the configuration files for *lwarfmk* are modified to remember which TEX engine was used. X_ELATEX or LuaLATEX will be used for future runs of *lwarfmk*.

3. To recompile the document:

Enter ⇒ **lwarfmk print**

-and-

Enter ⇒ **lwarfmk html**

4. Also remember to update the indexes and recompile again:

Enter ⇒ **lwarfmk htmlindex**

Enter ⇒ **lwarfmk html**

Enter ⇒ **lwarfmk printindex**

Enter ⇒ **lwarfmk print**

5.10 Using DVI LATEX

Traditional DVI LaTeX may also be used along with .eps image files. An SVG version of each image must also be provided. *lwarfmk* may be used to convert image formats.

To convert EPS files to PDF:

Enter ⇒ **lwarfmk epstopdf *.eps** (or a list of files)

To convert PDF files to SVG:

Enter ⇒ **lwarfmk pdftosvg *.pdf** (or a list of files)

 **bitmapped fonts** See section 7.4 regarding font selection to avoid the use of bitmapped fonts.

5.11 Using a glossary

lwarp supports the `gloss` and `glossaries` packages, although this tutorial does not supply an example.

5.11.1 `gloss` package

See section [8.6.11](#).

5.11.2 `glossaries` package

To process the glossary for the print version:

Enter ⇒ **lwarpmk printglossary**

⚠ (If `makeglossaries` is not found, see section [8.6.12](#).)

To process the glossary for the HTML version:

Enter ⇒ **lwarpmk htmlglossary**

In each case, the document will have to be recompiled afterwards:

Enter ⇒ **lwarpmk html1**

Enter ⇒ **lwarpmk html**

Enter ⇒ **lwarpmk print1**

Enter ⇒ **lwarpmk print**

See section [8.6.12](#) to set options for processing glossaries.

5.12 Cleaning auxiliary files

To remove the auxiliary files .aux, .toc, .lof, .lot, .idx, .ind, .log, and .gl*, and a few others:

Enter ⇒ **lwarfmk clean**

5.13 Cleaning auxiliary and output files

To remove the auxiliary files, and also remove the .pdf and .html files:

Enter ⇒ **lwarfmk cleanall**

5.14 Cleaning the images from the <project>-images directory

The <project>-images directory contains svg images automatically generated for inline and display math, tikz, etc. To remove all the images from the `lateximages` directory:

Enter ⇒ **lwarfmk cleanimages**

5.15 Converting PDF or EPS images to SVG

HTML cannot display PDF or EPS images, so any external PDF graphics images must be converted to SVG format. `pdftocairo` and `epstopdf` may be used one image at a time, but `lwarfmk` also provides a way to convert PDF or EPS images in bulk:

Enter ⇒ **lwarfmk epstopdf *.eps** (or a list of files)

Enter ⇒ **lwarfmk pdftosvg *.pdf** (or a list of files)

Be sure to always provide SVG files for HTML output.

5.16 Creating HTML from an incomplete compile

During testing it may be useful to finish the HTML conversion even when the document had errors and did not compile successfully. To attempt an HTML conversion of an incomplete document:

Enter ⇒ **lwarfmk pdftohtml [-p project]**

5.17 Processing multiple projects in the same directory

 **xr, xr-hyper, xcite**

It is possible to have several projects in the same directory. `lwarfmk` has an optional parameter which is the document to compile.

To create each project:

Enter ⇒ **pdflatex project_a**

Enter ⇒ **pdflatex project_b**

Each project is given its own configuration file:

`project_a.lwarpmkconf`, `project_b.lwarpmkconf`

To compile each project with `lwarkmk`:

Enter ⇒ **lwarpmk print -p project_a**

Enter ⇒ **lwarpmk print -p project_b**

Enter ⇒ **lwarpmk html -p project_a**

Enter ⇒ **lwarpmk html -p project_b**

To generate each project's images:

Enter ⇒ **lwarpmk limages -p project_a**

Enter ⇒ **lwarpmk limages -p project_b**

To clean each project's images:

Enter ⇒ **lwarpmk cleanlimages -p project_a**

Enter ⇒ **lwarpmk cleanlimages -p project_b**

To clean each project's auxiliary files:

Enter ⇒ **lwarpmk cleanall -p project_a**

Enter ⇒ **lwarpmk cleanall -p project_b**

If using *bibtex*, for example, the HTML version must also be processed:

Enter ⇒ **bibtex project_a.html**

5.18 Using the *make* utility

lwarpmk has an action which may be useful for integration with the common *make* utility:

`lwarpmk pdftohtml [-p project]`

make may be used to compile the code to PDF with HTML tags (`project_html.pdf`), then *lwarpmk* may be used to convert each target to HTML files.

5.19 What next?

How do I do something? See the [General Index](#).

Something do not work! See the [Troubleshooting Index](#) or section 13: [Troubleshooting](#).

Package options: See section 28, [Package options](#).

HTML and filename settings: See section 7.6, [Customizing the HTML output](#).

Footnote placement: See section 7.6, [Customizing the HTML output](#).

Title page, indexing, glossaries: See section 8.6, [Front and back matter](#).

Shell escape: See section 7.3, [Shell escape](#).

css customization: See section 7.7, [Customizing the css](#).

Localization: (languages) — See section 7.1, [Localization](#).

Accessibility: (alt and title tags) — See section 7.2, [Accessibility](#).

Converting an existing document: See section 6, [Converting an existing document](#).

EPUB conversion: See section 10, [EPUB conversion](#).

Word processor conversion: See section 11, [Word-processor conversion](#).

6 Converting an existing document

To convert an existing document for use with l warp:

1. Arrange the document in the following order:
 - (a) Declare the \documentclass.
 - (b) Load text fonts.
 - (c) Load inputenc or inputenx, fontenc, or fontspec.
 - (d) Load l warp.
 - (e) Load remaining packages.
2. Modify the document:
 - (a) If using named HTML files, in section names use paren math $\backslash(x+y\backslash)$ instead of dollar math $\$x+y\$$. (Dollar math works, but appears in the file-name.) Or, use a short name for the TOC entry without the math, or use \texorpdfstring:

```
\section{A name with math
\texorpdfstring{\$1+2=3\$}{text description}}
```
 - (b) Avoid using the \includegraphics scale option. Change:

```
\includegraphics[scale=<xx>]{...}
```

 to:

```
\includegraphics[width=<yy>\linewidth]{...}
```
 - (c) Possible changes to tabular environments include: * columns, multirow, longtable, supertabular, xtab, bigdelim. See section 8.10.1.
 - (d) If using braces in package options, such as with caption, see section 8.1.
 - (e) Possible option clashes with memoir. See section 8.13.
 - (f) If using indexes, see section 8.6.15.
 - (g) If using many indexes, glossaries, . aux files, etc., see section 8.6.15 regarding morewrites. If morewrites is already used, be sure to add the setup with allocate=10.
 - (h) Other changes as per Special cases and limitations, section 8.
3. Convert any PDF images to SVG. See section 8.8.
4. Manually compile the print version with *latex*, *pdflatex*, *lualatex*, or *xelatex*.
5. l warpmk print to finish the print version.
6. l warpmk html to create the HTML version.
7. l warpmk limages to create the SVG images of any SVG math, lateximage, Tikz, etc.

Need help?

See the General Index for “how-to”, and the Troubleshooting Index if something doesn’t work. A Troubleshooting section is also available. The Index of Objects contains automated entries for each package, macro, environment, counter, boolean, and other objects; individually and also sorted by category.

7 Additional details

7.1 Localization

Regional localization is supported by lwarp via the following package options and macros:

Object names: L^AT_EX provides redefinable names for various objects, and lwarp adds a few more. Use \renewcommand to change these.

\abstractname: This macro is honored by lwarp.

\linkhomename: Displayed by the link to the homepage.

\sidetocname: Displayed at the head of the sidetoc.

HTML settings: See table 6 and section 7.6 for details.

\HTMLLanguage: The language to declare for each web page.

\ImageAltText, \MathImageAltText, \PackageDiagramAltText, \AltTextOpen, \AltTextClose: The defaults used for HTML alt text for images. See section 7.2.

\CSSFilename: The name of the css file to use.

\MathJaxFilename: The name of the MATHJAX script to use.

Package options:

ImagesName and ImagesDirectory: These options control the filenames used by lwarp when it automatically generates images. See table 5 and section 7.5.

xindyStyle, xindyLanguage, xindyCodepage: When using *xindy*, these options may be set according to local use. See section 8.6.21.

pdftotextEnc: To adjust the encoding of *pdftotext*.

7.2 Accessibility

lwarp provides several methods for improving access to the document using tools such as text-only browsers, copy / paste, text-to-speech readers, or Braille readers. HTML provides the alt text attribute for images, which is used by lwarp as described below. HTML also provides the title attribute, which usually generates a pop-up text. lwarp can add this to a reference or hyperlink. MATHJAX also has provisions for improved accessibility as well.

\ImageAltText: The default HTML alt text for \includegraphics and \textrm{images}. Set with \renewcommand.

\includegraphics alt key: For \includegraphics, lwarp adds the alt key/value. For example:

```
\includegraphics[alt={Some text.}]{filename}
```

svg math: For simple SVG math, lwarf places the L^AT_EX math expression in the alt text, so that the L^AT_EX expression may be copied and pasted to another document as plain text.

\MathImageAltText: For complicated SVG math, such as enclosed in \InlineMathOther / \InlineMathNormal, or \DisplayMathOther / \DisplayMathNormal, the HTML alt text will be set to \MathImageAltText. Set with \renewcommand.

MATHJAX: For MATHJAX, the accessibility tools provided by MATHJAX are enabled by default by lwarf's MATHJAX scripts.

\PackageDiagramAltText: Various packages create diagrams which lwarf converts into SVG images. These are given alt text set to \PackageDiagramAltText. Set with \renewcommand.

custom alt text **\ThisAltText:** The HTML alt text of the next image may be set with:

```
\ThisAltText{Custom text about the image.}
<SVG math, Tikz, picture, etc.>
```

The next single image will be generated with the given text, and the following images will revert to back to their defaults.

references and links **\ThisAltText** may also be used to assign an HTML title to the next reference or hyperlink.

```
\ThisAltText{Custom text about the link.}
Text ... \ref{label_name} ... text.
```

See section 7.6.

\AltTextOpen and \AltTextClose: By default, HTML alt text is enclosed by parentheses. This may be changed by redefining \AltTextOpen and \AltTextClose. Set with \renewcommand.

7.3 Shell escape

Opt --shell-escape Some documents require the use of an external program, which is allowed when using the --shell-escape command-line option. When the document is first compiled manually, and also whenever the print version is recompiled, lwarf detects and remembers whether shell escape is enabled. If so, it will also be enabled when the document is recompiled with *lwarpmk*.

7.4 Font and UTF-8 support

⚠ type 3 bitmapped fonts

lwarf uses *pdftotext* to convert PDF output into UTF-8-encoded text. This process requires that UTF-8 information be embedded in the PDF file, which may prevent the use of older “type 3” bit-mapped fonts, and of older packages such as ae. The lwarf option pdftotextEnc may be useful in some situations. See section 7.5.

vector fonts
Computer Modern

⚠ *pdflatex*

⚠ DVI *latex*

While using DVI *latex* or PDF *pdflatex*, if no font-related package is specified then the default COMPUTER MODERN font is used, which may be a “type 3” bit-mapped font which may not convert well to plain text. A “type 1” vector font is required.

Pkg cm-super To use the updated cm-super's type 1 fonts instead of Computer Modern, install the cm-super font package.

Pkg lmodern To use Latin Modern instead, add

```
usepackage{lmodern}
```

to the preamble.

Pkg dejavu Another useful option is the Deja Vu series of fonts, which have an increased coverage of language and glyphs:

```
\usepackage{dejavu}
```

latex, pdflatex, T1, UTF8 While using DVI *latex* or PDF *pdflatex*, l warp automatically loads fontenc with T1 encoding. fontenc may be loaded with an additional encoding after l warp. inputenc is automatically loaded with UTF8 encoding if it has not yet been loaded, but may also be specified with another encoding such as latin1. See the next section regarding index encoding.

⚠ xelatex and lualatex X_EL^AT_EX and L_UaL^AT_EX users must use the fontspec package. Do NOT use fontenc!

Place fontspec or fontenc, xunicode, and other font and UTF-8 related commands after the \documentclass command and before \usepackage{l warp}.

⚠ package conflicts In some cases, a package conflict may require that a font package be loaded after l warp, which should work as well:

1. documentclass{article/book/report} comes first, followed by any of:
2. Font and UTF-8 related commands:

- For X_EL^AT_EX or L_UaL^AT_EX:

Pkg fontspec – fontspec and font choices

Pkg ligatures l warp sets the following to turn off TeX ligatures during the generation of HTML tags, and turn off common ligatures in regular text, since older browsers may not display them correctly and newer browsers can automatically re-create them.

```
\defaultfontfeatures[\rmfamily]{Ligatures={NoCommon,TeX}}
\defaultfontfeatures[\sffamily]{Ligatures={NoCommon,TeX}}
\defaultfontfeatures[\ttfamily]{Ligatures=NoCommon}
```

- For pdflatex:

Pkg lmodern (a) \usepackage{lmodern}, or other font-related packages

Pkg fontenc (b) \usepackage[T1]{fontenc}

Pkg inputenc (c) \usepackage[utf8]{inputenc}, or latin1, etc. Or use inputenx.

Pkg inputenx (d) \usepackage{newunicodechar} along with related definitions.

Pkg newunicodechar (e) To assist with the PDF-HTML conversion:

File glyptounicode.tex i. \input glyptounicode.tex

ii. \input glyptounicode-cmr.tex% from the pdfx package

iii. \pdfgentounicode=1

(f) Another option to assist with the PDF-HTML conversion:

Pkg cmap
Pkg textcomp

– \usepackage{cmap}
(g) \usepackage{textcomp}

3. \usepackage{l warp} (section 7.5) goes after any of the above, followed by:
4. \usepackage{newtxmath} or other math-related font packages. Many of these load `amsmath`, which must be loaded after `l warp`, so they must also be loaded after `l warp`.
5. \setmonofont{TeX Gyre Cursor} or similar may be required if using X_EL^AT_EX or L^AU_AL^ET_EX and `fontspec` along with traditional font packages such as `txfonts`, `newtxtext`, etc. This is required to turn off the monospaced font's ligatures with `fontspec` after loading the traditional font packages. Monospaced output ligatures must be turned off to produce the correct HTML characters.
6. ... the rest of the preamble and the main document.

 **UTF-8 locale** In some cases, an external program may require a UTF-8 “locale”. See section 9.8.

7.4.1 Indexes, glossaries, and encoding

`l warp` uses the `xindy` program to processes indexes. `xelatex` and `lualatex` use `xindy` and `pdflatex` uses `texindy`.

The `l warp` option `xindyLanguage` may be used to set the language option for `xindy`, and the `xindyCodepage` option may be used to set the `codepage` option for `xindy`. These are used for index generation.

7.5 l warp package loading and options

l warp supports book, report, and article classes, as well as the equivalent Koma-script classes and memoir, and various CJK-related classes and packages.

Load the l warp package immediately after the font and UTF-8 setup commands.

Package options may be set while loading l warp, or later with

```
\l warpsetup{<key=value, . . . >}
```

Pkg l warp l warp package options are as follows:

Opt mathsvg **mathsvg, mathjax**: For math display, select mathsvg (default) or mathjax. For more information about the math options, see section 8.7.
Opt mathjax

Opt latexmk **latexmk**: Tells l warpmk to use latexmk to recompile the document several times if necessary. Otherwise, l warpmk attempts to determine for itself whether to recompile. See section 7.6.
Default: false

Opt dvips **dvips**: Tells l warpmk to use dvips and ps2pdf to convert DVI output to PDF.
Default: false

Opt dvipdfm **dvipdfm**: Tells l warpmk to use dvipdfm to convert DVI output to PDF.
Default: false

Opt dvipdfmx **dvipdfmx**: Tells l warpmk to use dvipdfmx to convert DVI output to PDF.
Default: false

Opt HomeHTMLFilename **HomeHTMLFilename**: See section 7.6.
Default: {}

Opt HTMLFilename **HTMLFilename**: See section 7.6.
Default: {}

Opt ImagesName **ImagesName**: The prefix for the images automatically generated by l warp for objects such as SVG math and lateximages.
Default: image-

Opt ImagesDirectory **ImagesDirectory**: The directory for the images automatically generated by l warp for objects such as SVG math and lateximages. By default, these images will appear in a directory named <jobname>-images, and the images will be named and numbered image-<nn>.
Default: \jobname-images

Opt PrintLatexCmd **PrintLatexCmd**: Sets the shell commands executed by l warpmk print. If not specified, will automatically be set according to the detected LATEX engine and the use of --shell-escape.
Default: <automatic>

Opt HTMLLatexCmd **HTMLLatexCmd**: Sets the shell commands executed by l warpmk html. If not specified, will automatically be set according to the detected LATEX engine and the use of --shell-escape.
Default: <automatic>

Opt makeindex **makeindex**: Sets PrintIndexCmd, HTMLIndexCmd, and LatexmkImageCmd to use makeindex
Default: makeindex

Table 5: lwarp package options

Option	Description
<code>mathsvg</code>	Show math using SVG images.
<code>mathjax</code>	Show math using MATHJAX.
<code>latexmk</code>	Use <i>latexmk</i> for compiling documents.
<code>dvips</code>	Use <i>dvips</i> and <i>ps2pdf</i> to convert DVI documents.
<code>dvipdfm</code>	Use <i>dvipdfm</i> to convert DVI documents.
<code>dvipdfmx</code>	Use <i>dvipdfmx</i> to convert DVI documents.
<code>HomeHTMLFilename</code>	The filename of the home page.
<code>HTMLFilename</code>	A prefix for the filenames of the remaining web pages.
<code>ImagesName</code>	A prefix for the filenames of generated images.
<code>ImagesDirectory</code>	The directory used to hold generated images.
<code>PrintLatexCmd</code>	The shell commands for lwarpmk print .
<code>HTMLLatexCmd</code>	The shell commands for lwarpmk html .
For indexing (section 8.6.15) and glossaries (section 8.6.12):	
<code>makeindex</code>	Use <i>makeindex</i> to generate indices.
<code>xindy</code>	Use <i>xindy</i> to generate indices.
<code>makeindexStyle</code>	Set a custom style for <i>makeindex</i> .
<code>xindyStyle</code>	Set a custom style for <i>xindy</i> .
<code>xindyLanguage</code>	The <i>xindy</i> language option used for index generation.
<code>xindyCodepage</code>	The <i>xindy</i> codepage option used for index generation.
<code>PrintIndexCmd</code>	Shell commands executed by lwarpmk printindex .
<code>HTMLIndexCmd</code>	Shell commands executed by lwarpmk htmlindex .
<code>LatexmkIndexCmd</code>	Shell commands executed by <i>latexmk</i> .
<code>GlossaryCmd</code>	Shell command executed by lwarpmk printglossary and lwarpmk htmlglossary .
Seldom necessary:	
<code>OSWindows</code>	Force compatibility with MS-WINDOWS.
<code>pdftotextEnc</code>	Set the encoding for <i>pdftotext</i> .
<code>lwarpmk</code>	Generate a local copy of <code>lwarpmk.lua</code> .
Used internally by <code>lwarp</code> :	
<code>warpprint</code>	Generate print output, and also generate configuration files.
<code>warpHTML</code>	Generate HTML output.
<code>BaseJobname</code>	The \jobname to use. Set to the \jobname of the printed version even while generating HTML.

when generating indexes with **lwarpmk printindex**, **lwarpmk htmlindex**, or **latexmk**. If neither `makeindex` nor `xindy` is used, `makeindex` is assumed.

Opt `xindy` **xindy:** Sets `PrintIndexCmd`, `HTMLIndexCmd`, and `LatexmkImageCmd` to use *xindy* when generating indexes with **lwarpmk printindex**, **lwarpmk htmlindex**, or **latexmk**.
Default: `makeindex`

Opt `makeindexStyle` **makeindexStyle:** If you wish to use a custom .ist file for index generation, see section 28.
Default: `lwarp.ist`

Opt `xindyStyle` **xindyStyle:** If you wish to use a custom .xdy file for index generation, see section 28.
Default: `lwarp.xdy`

Opt `xindyLanguage` **xindyLanguage:** If using an index or glossary, see section 28.
Default: `english`

Opt `xindyCodepage` **xindyCodepage:** If using an index, see section 28.
Default: `utf8`

Opt `PrintIndexCmd` **PrintIndexCmd:** Sets the shell commands executed by **lwarpmk printindex**. If not specified, will be set by the selection of `makeindex` or `xindy`. May be used to specify the creation of multiple indexes. See section 8.6.15.
Default: <automatic>

Examples:

```
makeindex -s lwarp.ist projectname.idx          (makeindex)
xindy -M lwarp.xdy -L english -C utf8 projectname.idx    (xindy)
```

automatic setting

The use of the `makeindex` or `xindy` options sets `PrintIndexCmd` to sensible values for each of those programs while compiling a single index. `lwarp`'s `makeindexStyle`, `xindyStyle`, `xindyLanguage`, and `xindyCodepage` options will be used if specified.

⚠️ xindy

If specifying `PrintIndexCmd` manually, be sure to assign an *xindy* language and codepage with the `-L` and `-C` *xindy* options, as the `lwarp` `xindyLanguage` and `xindyCodepage` options are not used for the `PrintIndexCmd` option when it is set manually.

This option is stored in the configuration files `lwarpmk.conf` and `*.lwarpmkconf`, and is then passed by the **lwarpmk printindex** command to the operating system to compile the print indexes. Since the command string is parsed by TeX, written to a file, read from the file by LuaTeX, and finally passed to the operating system, any attempt at quoting will be problematic. For complicated commands, it would be best to create a shell script, and simply refer to the script with the `lwarp PrintIndexCmd` option.

Opt `HTMLIndexCmd` **HTMLIndexCmd:** Sets the shell commands executed by **lwarpmk htmlindex**. If not specified, will be set by the selection of `makeindex` or `xindy`. May be used to specify the creation of multiple indexes. See section 8.6.15.
Default: <automatic>

⚠️ filenames

Example settings are similar to `PrintIndexCmd`, but append `_html` to the filenames:

```
makeindex -s lwarp.ist projectname_html.idx      (makeindex)
xindy -M lwarp.xdy -L english -C utf8 projectname_html.idx (xindy)
```

automatic setting

The use of the `makeindex` or `xindy` options sets `HTMLIndexCmd` to sensible values for each of those programs while compiling a single index. `lwarp`'s `makeindexStyle`, `xindyStyle`, `xindyLanguage`, and `xindyCodepage` options will be used if specified.

⚠️ xindy

If specifying `HTMLIndexCmd` manually, be sure to assign an `xindy` language and codepage with the `-L` and `-C xindy` options, as the `lwarf xindyLanguage` and `xindyCodepage` options are not used for the `HTMLIndexCmd` option when it is set manually.

As with `PrintIndexCmd`, to generate complicated indexes it may be worthwhile to use a shell script, then refer to that script with `HTMLIndexCmd`.

Opt `LatexmkIndexCmd`
Default: `<automatic>`

LatexmkIndexCmd: Sets the shell commands executed by `latexmk`. Unlike `PrintIndexCmd` and `HTMLIndexCmd`, `LatexmkIndexCmd` does not include any filenames, which will be provided instead by `latexmk`. See section 8.6.15.

Example settings are similar to `PrintIndexCmd`, but without a filename:

<code>makeindex -s lwarf.ist</code>	<i>(makeindex)</i>
<code>xindy -M lwarf.xdy -L english -C utf8</code>	<i>(xindy)</i>

automatic setting

The use of the `makeindex` or `xindy` options sets `LatexmkIndexCmd` to either of the two settings show above. `lwarf`'s `makeindexStyle`, `xindyStyle`, `xindyLanguage`, and `xindyCodepage` options will be used if specified. Unlike `PrintIndexCmd` and `HTMLIndexCmd`, `latexmk` uses either of the single-line settings of `LatexmkIndexCmd` shown above to compile each of multiple indexes if necessary.

⚠️ xindy

If specifying `LatexmkIndexCmd` manually, be sure to assign an `xindy` language and codepage with the `-L` and `-C xindy` options, as the `lwarf xindyLanguage` and `xindyCodepage` options are not used for the `LatexmkIndexCmd` option when it is set manually.

Opt `GlossaryCmd`
Default: `makerglossaries`

GlossaryCmd: Sets the shell command executed by `lwarpmk printglossary` and `lwarpmk htmglossary`. The print or HTML glossary filename is appended to this command. See section 8.6.12.

Opt `OSWindows`

OSWindows: `lwarf` attempts to automatically sense WINDOWS, but it may be forced with this option. See section 7.8.

Opt `pdftotextEnc`
Default: `UTF-8`

pdftotextEnc: Used to specify the encoding used by `pdftotext` during the PDF-HTML conversion. In most situations, the default is the correct choice.

Opt `lwarpmk`

lwarpmk: If you wish to have `lwarf` generate a local copy of `lwarpmk.lua` for archival or local-installation purposes, compile the print version with the `lwarpmk` option set. See section 28.

The following options are used internally by `lwarf`, and usually are not used in the user's document:

Opt `warpprint`
Opt `warpHTML`

warpprint and warpHTML: Usually controlled by `lwarpmk`, and not set in the document. Select the `warpprint` option to generate print output (default), or the `warpHTML` option to generate HTML5 output. The default is print output, so the print version may be compiled with the usual `pdflatex`, etc. When `lwarf` is loaded in print mode, it creates `<project>.html.tex`, which sets the `warpHTML` option before calling the user's source code `<project>.tex`. In this way, `<project>.tex` can `\usepackage{lwarf}` without any options to create a printed version, while `<project>.html.tex` will create an HTML version.

Opt BaseJobname
Default: \jobname

BaseJobname: Not intended for the user. Used internally by lwarp when creating the *_html.tex file used to compile the HTML version. See section 28.

7.6 Customizing the HTML output

Table 6 shows several settings may be used to customize the HTML output. Watch for the correct placement of each!

⚠ Placement! Note that if changes are made, it is best to first:

1. Clear all the HTML, PDF, and auxiliary files:

Enter ⇒ **lwarfmk clearall**

2. Recompile the print version in order to recreate the configuration files for *lwarfmk*:

Enter ⇒ **lwarfmk print**

3. Finally, recompile the HTML version with the new settings:

Enter ⇒ **lwarfmk html**

Options for the lwarf package:

Use the following as options for `\usepackage[<options>]{lwarf}`:

Opt `HomeHTMLFilename`
Default: `\BaseJobname`

HomeHTMLFilename: Filename of the homepage, without the “.html” suffix. Defaults to the `\BaseJobname`. A common setting is:

`HomeHTMLFilename=index`

filename underscores

causing the homepage to be the file `index.html`. Underscores are allowed in `HomeHTMLFilename` and `HTMLFilename` options, but may need to be escaped elsewhere, such as when appearing in a list:

`\item [\href{file_name.pdf}{text}] \`

See section 7.6.1 for examples of naming and numbering HTML files.

Opt `HTMLFilename`
Default: `<empty>`

HTMLFilename: A filename prefix for the rest of the HTML web pages. Useful for numbered web pages with a common prefix. May be empty. See section 7.6.1 for examples of naming and numbering HTML files.

Opt `latexmk`
Default: `false`

latexmk: Controls whether *lwarf* uses *latexmk* to compile the document. This setting is written to *lwarfmk*'s configuration files.

Opt `mathsvg`
Default: `true`

mathsvg: Selects SVG display for math output. (The default.)

Opt `mathjax`
Default: `false`

mathjax: Selects MATHJAX for math output.

Opt `makeindex`

makeindex: Selects *makeindex* for index generation by *lwarfmk*.

Default: `makeindex`

Opt `xindy`

xindy: Selects *xindy* for index generation by *lwarfmk*.

Default: `makeindex`

Placed in the preamble before `\begin{document}`:

`\linkhomename`
Default: `Home`

\linkhomename: Name of the link to the home page. Paragraphs are allowed. Redefine with `\renewcommand`.

Table 6: HTML settings

Macro/Cntr/Bool	Description
\linkhomename	Name of the link to the homepage.
SideTOCDepth	Sectioning depth of the sidetoc.
\sidetocname	Name of the sidetoc.
FileDepth	Sectioning depth of the file splits.
CombineHigherDepths	Combine higher section levels.
FileSectionNames	Use section names for file names, else use numbers.
\FilenameLimit	Maximum length of the generated filenames.
FootnoteDepth	Sectioning depth of footnotes.
\abstractname	The name of the abstract.
\ImageAltText	\includegraphics and other images' alt tag.
\ThisAltText {<text>}	Assigns an alt/title tag for the next image or link.
\MathImageAltText	The SVG math image \teximage alt tag.
\PackageDiagramAltText	The suffix for a package's \teximage alt tags.
\AltTextOpen	Start an HTML alt tag.
\AltTextClose	End an HTML alt tag.
\CSSFilename	The css for the following files.
\MathJaxFilename	The MathJax script for the following files.
\HTMLLanguage	The HTML lang tag.
\HTMLTitle	The homepage's <title>, overriding \title.
\HTMLTitleBeforeSection	Set subpage <title>s to \HTMLTitle - sectionname
\HTMLTitleAfterSection	Set subpage <title>s to sectionname - \HTMLTitle
\HTMLAuthor	The HTML author meta tag, overriding \author.
\HTMLDescription	The HTML description meta tag.
\HTMLFirstPageTop	Heading for the home page.
\HTMLPageTop	Heading for the other pages.
\HTMLPageBottom	Footing for all pages.
HTMLDebugComments	Boolean to generate HTML comments.

Ctr tocdepth

tocdepth: Sectioning depth of the table of contents. See section 16 for a list of LATEX stack depths.

Ctr SideTOCDepth

Default: 1

SideTOCDepth: Sectioning depth of the sidetoc. Defaults to 1, causing the sidetoc to show sections but not subsections.

sideroc

Each subpage of the website has its own small table of contents on the side (the “sidetoc”). Its depth is set by SideTOCDepth. This sidetoc is only shown if the browser display is wide enough. When using a narrow web browser window, “responsive web design” is used to show the sidetoc at the top of the page, as well as a link back to **Home** at the top and bottom.

It is recommended to set:

```
SideTOCDepth=FileDepth
```

or

```
SideTOCDepth=FileDepth+1
```

⚠️ inaccessible pages

If SideTOCDepth < FileDepth, web pages will be inaccessible via the sidetoc.

\sidetocname
Default: Contents

\sidetocname: Name of the sidetoc. Paragraphs are allowed. Redefine with \renewcommand.

Ctr FileDepth
Default: -5

FileDepth: Sectioning depth of file splits. Defaults to -5, causing the entire HTML website to be one single file.

- To place the entire file into one HTML page, use:
`\setcounter{FileDepth}{-5}`
- To split the HTML file at \section depth, use:
`\setcounter{FileDepth}{1}`
- To ensure that the HTML pages/files are accessible:
 Place a \tableofcontents somewhere before the first section break (therefore in the “home page”), and set
`tocdepth >= FileDepth`

Bool CombineHigherDepths
Default: true

CombineHigherDepths: Combine a higher section with its first lower subsections, down to the FileDepth. Defaults to true. Set to false to simulate the concept of a chapter opening on its own page, for example.

The file splits are controlled by the counter FileDepth and the boolean CombineHigherDepths. Setting FileDepth to 0 splits the file at chapters, 1 at sections, etc. CombineHigherDepths controls whether to combine pages at levels higher than the chosen FileDepth, such as in this tutorial where the page which opens the chapter also contains the first section. Be careful to set tocdepth and SideTOCDepth to allow access to each page of the website. Set tocdepth and SideTOCDepth to be greater than or equal to FileDepth.

⚠️ Inaccesible pages!

⚠️ Lost in an old page!

When making changes to the file structure, it is possible to end up with the web browser pointing to an old file which is no longer in use. When this occurs, changes to the web site will not appear in the browser, even if reloading the page, because that page is no longer in use. It is best to return to the home page, clean the files (`lwarpmk cleanall`), change FileDepth

and/or `CombineHigherDepths`, then finally recompile and renavigate to the desired page using the new file structure.

`Bool FileSectionNames`
`Default: true`

 **Unique filename!**

FileSectionNames: If true, web page filenames are derived from a sanitized version of the section names. If false, web pages are numbered. Either way, the `HTMLFilename` option is used as a prefix. See section [7.6.1](#) for examples of naming and numbering HTML files. The user must ensure that filenames are unique after begin sanitized. For example, `math` in the section name is removed before creating the filename, so the rest of the filename must be sufficiently unique to avoid name collisions.

`\FilenameLimit`
`Default: 80`

\FilenameLimit: The maximum length of the filenames generated by `lwarp`. `".html"` is added to this length. Redefine with `\renewcommand`.

`Ctr FootnoteDepth`
`Default: 3`

FootnoteDepth: Determines where to place pending footnotes. 3 places footnotes before each break down to the `\subsubsection` level. 1 places footnotes before each `\section` break. Any pending footnotes are also placed at the bottom of each page before each file break.

`Bool HTMLDebugComments`
`Default: false`

HTMLDebugComments: Set true to generate HTML comments, such as which section or `<div>` is being opened or closed.

`\abstractname`
`Default: Abstract`

\abstractname: The name of the abstract. This may also be over-written by the `babel` package. Defaults to "Abstract". Redefine with `\renewcommand`.

Placed before `\begin{document}`, or before any sectioning command which causes a file break:

`\CSSFilename`
`Default: lwarp.css`

\CSSFilename: `{<filename.css>}` Sets the css file to use for the following files. May be changed before each each sectioning command which would cause a file split.

The css styles of the web pages are set by the `\CSSFilename` command. If `\CSSFilename` is not used, a default plain style is used to mimic printed L^AT_EX output. `lwarp_sagebrush.css` is a semi-fancy colored style as shown in this tutorial. Change it to `lwarp_formal.css` for a more formal look, or comment out the `\CSSFilename` command to see the default. `\CSSFilename` may be used before each file break to set the css for individual pages of the website.

`\MathJaxFilename`
`Default: lwarp_mathjax.txt`

\MathJaxFilename: `{<filename>}` Sets the MathJax script file to use for the following files. May be changed before each each sectioning command which would cause a file split.

The MathJax script file is copied into the head of each HTML file. This may be used to point to a local repository, add extensions, or change the script somewhere in the middle of the document. `\MathJaxFilename` may be used before each file break to set the script file for individual pages of the website.

`\HTMLLanguage`
`Default: en-US`

\HTMLLanguage: `{<language>}` The HTML file's HTML lang meta tag. Defaults to en-US.

`\HTMLTitle`
`Default: \thetitle`

\HTMLTitle: `{<title>}` Overrides `\title` for the HTML header's meta title. De-

faults to `\thetitle`, which is set by `\title`, or empty otherwise. Unlike the author, `\thetitle` is set by `\title` even if not using the `titling` package.

`\HTMLTitleBeforeSection`
Default: `\HTMLTitleBeforeSection`

`\HTMLTitleAfterSection`

`custom <title>`

To customize subpage `<title>`s, redefine `\theHTMLTitleSection`, which defaults to:

```
\def\theHTMLTitleSection{%
  \theHTMLTitle\theHTMLTitleSeparator\theHTMLSection%
}
```

`\HTMLAuthor`
Default: `\theauthor`

`\HTMLAuthor: {<author>}` The HTML header's meta author. Defaults to `\theauthor`, which is set by `\author` if using the `titling` package, but is empty otherwise. There are several ways to represent the author and affiliations, especially if using the `authblk` package, most of which do not result in a sensible `\theauthor`, so `\HTMLAuthor` is useful to create a list of authors without their affiliations.

`\HTMLDescription`
Default: `<empty>`

`\HTMLDescription: {<description>}` Sets the HTML description tag for the following files. May be changed before each sectioning command which would cause a file split.

`\HTMLFirstPageTop`
Default: `<empty>`

`\HTMLFirstPageTop: {<contents>}` A user-definable custom action applied to the top of the home page. Useful for logos, etc. Defaults empty. Ignored in print output.

`\HTMLPageTop`
Default: `<empty>`

`\HTMLPageTop: {<contents>}` A user-definable custom action applied to the top of pages other than the home page. Useful for logos, etc. Defaults empty. `\LinkHome` may be used to place a link back to the homepage. Ignored in print output.

`\HTMLPageBottom`
Default: `<empty>`

`\HTMLPageBottom: {<contents>}` A user-definable custom action applied to the bottom of each web page. Useful for authors, copyright notices, contact information, etc. Defaults empty. `\LinkHome` may be used to place a link back to the homepage. Ignored in print output.

Placed in the home page before the first sectioning command which causes a file break:

 `\tableofcontents`

TOC on the homepage!

`\tableofcontents:` Used to place a table of contents on the home page. This command must be used before the first file split, so that a way is available to navigate to other files from the homepage.

Links to each chapter/section are provided, as selected by `tocdepth`.

Placed in the document wherever necessary:

`\ImageAltText`
Default: `image`

`\ImageAltText:` Redefine with `\renewcommand`. `\includegraphics` and other images are assigned an HTML alt tag according to `\ImageAltText` along

with `\AltTextOpen` and `\AltTextClose`. This text is visible in the browser if images are not loaded, and appears when the text is copied and pasted. The default is “image”, and it may be changed according to the document’s language. This may be set in the preamble, or changed as necessary inside the document, where it will affect the following `\includegraphics` and other images.

`\ThisAltText`

`\ThisAltText:` `{<text>}` `\ThisAltText` can be used to assign an HTML alt text attribute to the next image generated by a `lateximage`, `picture`, `tikzpicture`, or any other similar environment which generates an image, or the next SVG math expression. This tag is cleared after use. The tag is also cleared after each MATHJAX expression, in case the user changes between SVG math and MATHJAX.

`\ThisAltText` also may be used to add an HTML title to a reference or hyperlink, such as a `\ref`, `\cref`, `\href`, `\url`, `\hyperref`, or `\hyperlink`. In each case, the alternative text is cleared after use.

`\MathImageAltText`
Default: `math image`

`\MathImageAltText:` Redefine with `\renewcommand`. When creating an SVG math image, its HTML alt tag may be set to the math expression, which may be hashed for image reuse. In the case of `\ensuremath` or after `\inlinemathother`, where the contents require a unique image for each instance of the same expression, the alt tag is set to `\MathImageAltText`, along with `\AltTextOpen` and `\AltTextClose`, and the image is not reused.

This alt expression is visible in the browser if images are not loaded, and appears when the text is copied and pasted. The default is “math image”, and it may be changed according to the document’s language. This may be set in the preamble, or changed as necessary inside the document, where it will affect the following SVG math images.

`\PackageDiagramAltText`
Default: `diagram`

`\PackageDiagramAltText:` Redefine with `\renewcommand`. For many packages, the output is placed inside a `lateximage` with an HTML alt tag set to the package name followed by `\PackageDiagramAltText`. For example:

`(-xy- diagram)`

This expression is visible in the browser if images are not loaded, and appears when the text is copied and pasted. The default is “diagram”, and may it be changed according to the document’s language. This may be set in the preamble, or changed as necessary inside the document, where it will affect the following package diagrams.

`\AltTextOpen`
Default: `(`
`\AltTextClose`
Default: `)`

`\AltTextOpen:` Redefine with `\renewcommand`.

`\AltTextClose:` Redefine with `\renewcommand`. HTML alt text is enclosed by the macros `\AltTextOpen` and `\AltTextClose`, which default to an opening and closing parenthesis.

Env `warpprint`

`warpprint:` An environment which is only used while generating print output. Place inside anything which does not apply to HTML and which may cause problems with `lwarp`. If `lwarp` knows about and emulates or supports a package then its related macros, lengths, counters, etc. probably won’t have to be placed inside a `warpprint` environment, but unknown packages may cause problems which may be isolated from `lwarp` using this environment.

Do not place anything else on the same line as \end{warpprint}.

Env warpHTML

warpHTML: An environment which is only used while generating HTML output.
This is useful for website logos and other items which have no purpose in printed output.

Do not place anything else on the same line as \end{warpHTML}.

\warpprintonly

\warpprintonly: {{contents}} A macro version of the warpprint environment.

\warpHTMLonly

\warpHTMLonly: {{contents}} A macro version of the warpHTML environment.

7.6.1 Example HTML file naming

Examples of ways to name or number HTML files:

Numbered HTML nodes:

Example: Homepage index.html, and node-1, node-2.¹³

```
\usepackage[
    HomeHTMLFilename=index,
    HTMLFilename={node-}
]{lwarp}
\boolfalse{FileSectionNames}
```

Named HTML sections, no prefix:

Example: index.html, and About.html, Products.html

```
\usepackage[
    HomeHTMLFilename=index,
    HTMLFilename={}
]{lwarp}
\booltrue{FileSectionNames}
```

Named HTML sections, with prefix:

Example: Homepage mywebsite.html, and additional pages such as mywebsite-About.html, mywebsite-Products, etc.

```
\usepackage[
    HomeHTMLFilename=mywebsite,
    HTMLFilename={mywebsite-}
]{lwarp}
\booltrue{FileSectionNames}
```

7.7 Customizing the css

\CSSFilename {*filename*}
 Default: lwarp.css

\CSSFilename may be used to choose which .css file is used to display each page of the web site. Use \CSSFilename before \begin{document} to assign the style of the home page. If different parts of the website should have different styles, call \CSSFilename again before each section heading which creates a new file. This may be changed numerous times throughout the file, resulting in different HTML pages having different css files assigned:

```
...
\CSSFilename{myCSS.css}
\chapter{Another Chapter}
...
```

The styles provided by lwarp include:

lwarp.css: A default style if \CSSFilename is not used. This style is comparable to a plain LATEX document. To set this style, you may use \CSSFilename{lwarp.css}, or no \CSSFilename call at all.

lwarp_formal.css: A formal style with a serif fonts and a traditional look.

lwarp_sagebrush.css: A style with muted colors, gradient backgrounds, additional borders, and rounded corners.

To see each style in use, change the \CSSFilename entry in the tutorial, lwarpmk html again, and then reload the tutorial webpage.

Custom css A customized style may also be created. For each new project a file called sample_project.css is generated. This may be renamed to <project>.css then used by assigning \CSSFilename{<project>.css}.

⚠ Rename it! Note that sample_project.css is overwritten whenever lwarp is loaded in print mode. It is therefore important to rename the file to something like <project>.css before using it, so that your own changes are not overwritten.

<project>.css has an entry which loads lwarp.css, and this entry may be changed to load lwarp_formal.css or lwarp_sagebrush.css if desired. Additional changes to the css may be made by making entries later in the <project>.css file.

File lwarp.css
 File project.css
 File sample_project.css

It is best to make a local project-specific css file such as project.css, containing only things which are different from lwarp.css. The file project.css should refer to lwarp.css as follows:

```
/* ( --- Start of project.css --- ) */
/* ( --- A sample project-specific CSS file for lwarp --- ) */
```

¹³See \SetHTMLFileName to number in groups by chapter, for example.

```

/* Uncomment one of the following: */
@import url("lwarp.css") ;
/* @import url("lwarp_formal.css") ; */
/* @import url("lwarp_sagebrush.css") ; */

/* Project-specific CSS setting follow here. */
/* . . . */

/* ( --- End of project.css --- ) */

```

Finally use `\CSSfilename{<project>.css}` in the document to activate the custom CSS.

7.8 Selecting the operating system

Prog Unix	lwarp tries to detect which operating system is being used. UNIX / MAC OS / LINUX is the default (collectively referred to as “UNIX” in the configuration files), and MS-WINDOWS is supported as well.
Prog Mac OS	
Prog Linux	
Prog MS-Windows	If MS-WINDOWS is not correctly detected, use the lwarp option OSWindows.
Prog Windows	
Opt OSWindows	When detected or specified, the operating-system path separator used by lwarp is modified, and the boolean usingOSWindows is set true. This boolean may be tested by the user for later use.

7.9 Selecting actions for print or HTML output

The following environments and macros are used to select actions which only apply to either traditional L^AT_EX print-formatted PDF generation, or to HTML generation.

For most of built-in L^AT_EX and many additional packages there is user-level source code support or emulation, so no special handling will be required. For those cases which lwarp does not handle by itself, the following environments and macros may be used to isolate sections of code for print-only or HTML-only.

These environments are also useful for creating a special version of the titlepage for print and another for HTML.

Env warpHTML	Anything which is to be done only for HTML5 output is surrounded by a warpHTML environment:
--------------	---

```

\begin{warpHTML}
  ... something to be done only during \HTML\ generation
\end{warpHTML}

```

⚠ `\end{warpHTML}` Do *not* place anything else on the same line as `\end{warpHTML}`. The exact phrase is used to mark the end of the environment.

Env `\warpprint` Anything which is to be done only for print output is surrounded by a `\warpprint` environment:

```
\begin{warpprint}
  ... something to be done only during traditional \PDF\ generation
\end{warpprint}
```

⚠ `\end{warpprint}` As above, do not place anything else on the line with `\end{warpprint}`.

Env `\warpall` Anything which is to be done for any output may be surrounded by a `\warpall` environment. Doing so is optional.

```
\begin{warpall}
  ... something to be done during print \PDF\ or \HTML\ output
\end{warpall}
```

As above, do not place anything else on the line with `\end{warpall}`.

Macros are also provided for print-only or `HTML`-only code:

`\warpprintonly {<actions>}`

Performs the given actions only when print output is being generated.

`\warpHTMLonly {<actions>}`

Performs the given actions only when `HTML` output is being generated.

7.10 Commands to be placed into the `\warpprint` environment

Certain print-related commands should always be placed inside a `\warpprint` environment, or may need other special handling. These are unrelated to `HTML` output, but are hard to isolate automatically. For example:

- Paragraph formatting: `\parindent` `\parskip`
- Manual page positions such as the `textpos` package, which is emulated but only in a limited way.
- Anything changing the page counter. `l warp` requires that the page counter not be adjusted during `HTML` output.

Some packages require additional setup commands. Where these packages are emulated for `HTML`, setup commands may work for the emulated `HTML` output as well as for print output. See the details for each package in this document for more information.

Also see section 13: [Troubleshooting](#).

7.11 Title page

In the preamble, place an additional block of code to set the following:

```
\title{Document Title} % One line only
\author{Author One\affiliation{Affiliation One} \and
        Author Two\affiliation{Affiliation Two} }
\date{Optional date}
```

The title is used in the meta tags in the `HTML` files, unless overridden by `\HTMLTitle`, and the rest are used in `\maketitle`. To use a `\subtitle` or `\published` field, see section [66.8](#).

`\maketitle` Use `\maketitle` just after the `\begin{document}`, as this will establish the title of the homepage. Optionally, use a `titlepage` environment instead.

`Env titlepage` The `titlepage` environment may be used to hold a custom title page. The `titlepage` will be set in a `<div>` class `titlepage`, and `\printtitle`, etc. may be used inside this environment.

`Env titlingpage` Another form of custom title page, where `\maketitle` is allowed, and additional information may be included as well.

`\title {\langle title\rangle}`

⚠ **HTML corrupted newlines** Avoid newlines in the `\title`; these will interfere with the file break and css detection. Use a `\subtitle` command instead (section [66.8](#)). The title will appear in the document `\maketitle` as a heading `<h1>`. The `HTML` meta `title` tag will also have this title, unless `\HTMLTitle` is used to set the meta title to something else instead.

`\author {\langle author\rangle}`

In `\author`, `\protect` may be needed before some formatting commands. In `HTML`, the author will appear in a `<div>` of class `author` in the `\maketitle`. If the `titling` package is used, the author will also appear in a `HTML` meta tag, but `\HTMLAuthor` may be necessary to create a plain list of names if `\author` had affiliations added. `\affiliation` is a new addition to `lwarf`.

`\date {\langle date\rangle}`

`\date` works as expected. In `HTML`, this will appear in a `<div>` class `titledate`.

`\thanks {\langle text\rangle}`

`\thanks` are allowed in the `titlepage` fields, and will be rendered as `HTML` notes at the bottom of the title page.

7.12 HTML page meta descriptions

`\HTMLDescription {\langle A description of the web page.\rangle}`
Default: `(none)`

limitations Each page of HTML output should have its own HTML meta description, which usually shows up in web search results, is limited to around 150 characters in length, and should not include the ASCII double quote character (").

placement Use \HTMLDescription just before \begin{document} to set the description of the home page, and also just before each sectioning command such as \chapter or \section where a new file will be generated, depending on FileDepth. For example, if FileDepth is 1, use \HTMLDescription just before each \section command, and that description will be placed inside the HTML page for that \section. The same description will be used for all following HTML files as well, until reset by a new \HTMLDescription. It is best to use a unique description for each HTML file.

disabling To disable the generation of HTML description meta tags, use:

```
\HTMLDescription{}
```

7.13 HTML homepage meta title

\HTMLTitle {\langle title\rangle}

Default: \HTMLtitle{\thetitle}

Sets the contents of the web page <meta name="title"> element. May be set empty to cancel the meta title tag.

See section 7.6 for \HTMLTitleBeforeSection and \HTMLTitleAfterSection, used to set the title for HTML subpages.

7.14 HTML page meta author

\HTMLAuthor {\langle author\rangle}

Default: \HTMLAuthor{\theauthor}

Sets the contents of the web page <meta name="author"> element. May be set empty to cancel the meta author tag.

\author may be used to create a list of authors and their affiliations, in several formats if using authblk, and these may not successfully parse properly into a sensible list for \theauthor. \HTMLAuthor may be used to set the meta tag to a simple list of names.

8 Special cases and limitations

Some commonly-used L^AT_EX expressions should be modified as follows to allow for a smooth conversion to both HTML and print-formatted outputs.

Need help?

See the [General Index](#) for “how-to”, and the [Troubleshooting Index](#) if something doesn’t work. A [Troubleshooting](#) section is also available. The [Index of Objects](#) contains automated entries for each package, macro, environment, counter, boolean, and other objects; individually and also sorted by category.

8.1 Things to avoid

In the document, avoid the following:

options with braces

Package options: Package options may cause problems with `lwarp`, especially if they include curly braces.

If selecting options with braces in `\usepackage` does not work:

```
\usepackage[font={it,small}]{caption}% does not work
```

... try instead selecting the package options before loading `lwarp`:

```
\PassOptionsToPackage{font={it,small}}{caption}
...
\usepackage{lwarp}
...
\usepackage{caption}
```

... or try setting package options after the package has been loaded:

```
\usepackage{caption}
\captionsetup{font={it,small}}
```

page counter: Do not adjust the page counter. If doing so is required for the print version, place the adjustment inside a `warpprint` environment.

Custom math environment macros: Do not use expressions such as `\beq` as a replacement for `\begin{equation}`.

Custom macros in section, figure, table names: Custom macros which appear in sectioning commands or float captions then appear in the `.toc`, `.lof`, and `.lot` lists, and should be made robust using `\newrobustcmd` or `\robustify` from `etoolbox`, `xparse`, etc.

When setting `FileSectionNames` to true to name the HTML files from the section names, the file names are created from sanitized versions of the chapter or section names, but the section names must be plain text or something which expands into plain text. Robust macros will not work at the sectioning level which is used for file names, but a robust macro or other complicated name may be used for the mandatory argument of `\chapter`, `\section`, etc., if a plain-text version is also included in the optional argument:

```
\chapter[Plain Name]{\ARobustMacro{Fancy Name}}
```

8.1.1 Invalid HTML

Additionally, some objects are valid L^AT_EX, but invalid HTML. An example is a tabular inside \textbf, since HTML does not allow a table inside a span. l warp will create the table, and the browser may support it, but the result is technically invalid.

8.2 Formatting

8.2.1 Text formatting

 \bfseries, etc. \textbf, etc. are supported, but \bfseries, etc. work only in some situations.

 HTML special chars &, <, and > have special meanings in HTML. If \&, \textless, and \textgreater are used, proper HTML entities will be used, but there may be HTML parsing problems if these special characters occur unescaped in program listings or other verbatim text.

program listings For program listings, the listings package is supported, and its literate option is used to convert &, <, and > to proper HTML entities.

verbatim The various verbatim-related environments do not convert &, <, and >, so care must be taken to avoid accidentally including valid HTML code inside these environments. Adding a space on either side may be sufficient.

8.2.2 Horizontal space

\hspace \hspace is converted to an inline HTML span of the given width, except that 0 width is ignored, a width of .16667em is converted to an HTML thin breakable space (U+2009), and a \fill is converted to a \qquad.

\, \~ and \, are converted to HTML entities.

\kern \kern and \hskip are entered into the HTML PDF output as-is, then interpreted by \hskip *pdftotext*, and thus usually appear as a single space.

8.2.3 Text alignment

Use the environments center, flushright, flushleft instead of the macros \centering, \raggedright, \raggedleft.

 figure & table alignment \centering, etc. are honored in a figure or table if they are the first command inside the float:

```
\begin{table*}
\centering
\caption{A Table}
...

```

8.2.4 Accents

Native L^AT_EX accents such as \^ will work, but many more kinds of accents are available when using Unicode-aware XE^L_AT_EX and Lua^L_AT_EX.

8.2.5 textcomp package

Pkg textcomp Some textcomp symbols do not have Unicode equivalents, and thus are not supported.

⚠ missing symbols Many textcomp symbols are not supported by many system / browser fonts. In the css try referencing fonts which are more complete, but expect to see gaps in coverage.

8.2.6 Superscripts and other non-math uses of math mode

Use x instead of \$^{x}\$

8.2.7 Empty \item followed by a new line of text or a nested list:

lists Use a trailing backslash: \item[label] \

8.2.8 Filenames and URLs in lists or footnotes

filename underscore Escape underscores in the filenames:

```
\item[\href{file\_name.pdf}{text}]
```

8.2.9 relsize package

Pkg relsize For HTML, only the inline macros are supported: \textlarger, \textsmaller, and \textscale. Each becomes an inline span of a modified font-size.

\relsize, \larger, \smaller, and \relscale are ignored.

While creating SVG math for HTML, the original definitions are temporarily restored, and so should work as expected.

⚠ not small The HTML browser's setting for minumum font size may limit how small the output will be displayed.

8.3 Boxes and minipages

8.3.1 Marginpars

\marginpar [⟨left⟩] {⟨right⟩} \marginpar may contains paragraphs, but in order to re-

main inline with the surrounding text `\warp` nullifies block-related macros inside the `\marginpar`. Paragraph breaks are converted to `
` tags.

`\marginparBlock` `[<left>] {<right>}` To include block-related macros, use `\marginparBlock`, which takes the same arguments but creates a `<div>` instead of a ``. A line break will occur in the text where the `\marginBlock` occurs.

8.3.2 Save Boxes

 `HTML corrupted`

 `boxes` TEX boxes are placed inline and do not allow line breaks, so boxes with long contents may overflow the line during HTML conversion. `lwarp` uses methods which help avoid this problem.

 `minipage, \parbox` `\savebox` and related do not (yet) support `minipage` or `\parbox`.

8.3.3 Minipages

 `inline` A line of text with an inline `minipage` or `\parbox` will have the `minipage` or `\parbox` placed onto its own line, because a paragraph is a block element and cannot be made `inline-block`.

`placement` `minipages` and `\parboxes` will be placed side-by-side in HTML unless you place a `\newline` between them.

`side-by-side` Side-by-side `minipages` may be separated by `\quad`, `\quad`, `\enskip`, `\hspace`, `\hfill`, or a `\rule`. When inside a `center` environment, the result is similar in print and HTML. Paragraph tags are suppressed between side-by-side `minipages` and these spacing commands, but not at the start or end of the paragraph.

 `minipage in a span` There is limited support for `minipages` inside an HTML ``. An HTML `<div>` cannot appear inside a ``. While in a ``, `minipages`, and `\parboxes`, and any enclosed lists have limited HTML tags, resulting in an “inline” format, without markup except for HTML breaks. Use `\newline` or `\par` for an HTML break.

 `minipage size` When using `\ linewidth`, `\textwidth`, and `\textheight`, widths and heights in HTML are scaled proportionally to a 6×9 inch text area, and inside a `multicols` `\ linewidth` is divided by the specified number of columns.

`if width is \ linewidth` If a `minipage` or `\parbox` is assigned a width of exactly `\ linewidth`, in HTML it is automatically given no HTML width, thus allowed to fill the line as needed, similar to how it appears in print output.

`full-width if HTML` A new macro `\minipagefullwidth` requests that, during HTML output, the next single `minipage` or `\parbox` be generated without an HTML `width` attribute, allowing it to be the full width of the display rather than the declared print-output width. This may be useful where the printed version’s width makes no sense in HTML.

 `tabular, multicols` Inside a `tabular` or `multicols` environment, where the width depends on the browser window, `\minipagefullwidth` is effectively used by default for every `minipage` or `\parbox` inside the environment. `\UseMinipageWidths` may be used to tell `lwarp` to honor the specified widths of all following `minipages` and `\parboxes` until the end of

the local scope, and `\IgnoreMinipageWidths` may be used to tell `l warp` to ignore the specified widths.

⚠ text alignment

Nested `minipages` adopt their parent's text alignment in `HTML`, whereas in regular `LATEX PDF` output they do not. Use a `flushleft` or similar environment in the child `minipage` to force a text alignment.

8.3.4 Side-by-side minipages

Place side-by-side `minipages` inside a `center` environment, with horizontal space between them, such as `\quad`, `\quad\quad`, `\hspace`, or `\hfill`. The result is similar in print and `HTML`. Do not use space commands at the start or end of the line.

8.3.5 Framed minipages and other environments

`\fbox` can only be used around inline `` items during `HTML` output, but `HTML` cannot place a block element such as a `<div>` for a `minipage` or a list inside of a ``. Several options are provided for framing an object, depending on which kind of object and which packages are loaded:

`\fbox`
`\fboxBlock`
`Env` `fminipage`

For a framed object, options include:

To remove the frame in `HTML` output: Place the `\fbox` command and its closing brace inside `warpprint` environments. This will nullify the frame for `HTML` output.

For inline text:

To frame the contents inline with some formatting losses in `HTML`: This is the default action of `\fbox` when enclosing a `minipage`. During `HTML` output, `\fbox` nullifies the `HTML` tags for `minipage`, `\parbox`, and lists. The contents are included as inline text inside the `\fbox`'s `` of class `framebox`. For lists, line breaks are converted to `HTML` breaks. The result is a plain-text inline version of the contents, framed inline with the surrounding text, but lacking any extra `HTML` markup.

For inline `minipage` and lists:

To frame the contents on their own line with improved formatting in `HTML`: A new command `\fboxBlock` is included, intended to be a direct replacement for `\fbox` for cases where the `\fbox` surrounds a `minipage`, `table`, or `list`. For print output, this behaves as `\fbox`. For `HTML` output, the contents are placed inside an `HTML <div>` with the class `framed`, resulting in the contents being placed on their own line with a frame surrounding them. The contents preserve their `HTML` formatting, so lists and `minipages` look nicer, and valid `HTML` is created for a `tabular`. While an `\fbox` containing a `tabular` is valid `LATEX` code, the result in `HTML` is problematic since a `table` is a `<div>` not a ``, so use `\fboxBlock` around a `tabular`, or else place the `tabular` inside a `minipage`, or use `fminipage`, described next. Also see below regarding the “Misplaced alignment tab character &.” error.

For display `tabular`, `minipages`, and lists:

To create a framed `minipage` in both print and `HTML`: A new environment `fminipage` is included. For print output, this is identical to `minipage`, except that it is also

framed. For HTML output, this forms a <div> of class framed, the contents preserve their HTML formatting, and valid HTML is created for a tabular. Also see section 85 for a new environment fcolorminipage. Also see below regarding the “Misplaced alignment tab character &.” error.

colored boxes and frames:

To create colored frames and boxes: See section 516 for xcolor’s \colorbox and \fcolorbox, and l warp’s additional \colorboxBlock and \fcolorboxBlock.

To frame tables or verbatim environments: Place the contents inside a fminipage, or perhaps a \fboxBlock for a tabular. Also, if using \fboxblock with tabular, you will have to use \StartDefiningTabulars before the start of the macro which uses \fboxBlock and the tabular, and \StopDefiningTabulars afterwards. Also see the l warp documentation for the fancybox package.

To frame equations: See section 219 for the fancybox package.

For fancy framed minipages: See packages boxedminipage2e, shadow, fancybox, framed, mdframed.

Custom environments: Use a custom environment to create a sidebar, containing a BlockClass environment with custom css formatting, and \warpprintonly{\hrule} command:

```
\begin{BlockClass}{frameminipage}% ignored in print output
    % use \CSS\ to format div class ``framedminipage''
    \warpprintonly{\hrule} % only appears in print output
    Contents
    \warpprintonly{\hrule} % only appears in print output
\end{BlockClass}
```

8.3.6 fancybox package

Pkg fancybox
framed equation example

fancybox’s documentation has an example FramedEqn environment which combines math, \Sbox, a minipage, and an \fbox. This combination requires that the entire environment be enclosed inside a \lateximage, which is done by adding \lateximage at the very start of FramedEqn’s beginning code, and \endlateximage at the very end of the ending code. Unfortunately, the HTML alt attribute is not used here.

```
\newenvironmentFramedEqn
{
\lateximage% NEW
\setlength{\fboxsep}{15pt}
. . .
[\fbox{\TheSbox}]
\endlateximage% NEW
}
```

framing alternatives

\fbox works with fancybox. Also see l warp’s \fboxBlock macro and fminipage environment for alternatives to \fbox for framing environments.

framed table example

The fancybox documentation’s example framed table using an \fbox containing a tabular does not work with l warp, but the FramedTable environment does work if

⚠ Misplaced alignment tab character &

\fbox is replaced by \fboxBlock. This method loses HTML formatting. A better method is to enclose the table's contents inside a fminipage environment. The caption may be placed either inside or outside the fminipage:

```
\begin{table}
\begin{fminipage}{\linewidth}
\begin{tabular}{lr}
...
\end{tabular}
\end{fminipage}
\end{table}
```

- ⚠ **framed verbatim** lwarp does not support the verbatim environment inside a span, box, or fancybox's \Sbox, but a verbatim may be placed inside a fminipage. The fancybox documentation's example FramedVerb may be defined as:

```
\newenvironment{FramedVerb}[1] % width
{
  \VerbatimEnvironment
  \fminipage[#1]
  \begin{Verbatim}
}{%
  \end{Verbatim}
  \endfminipage
}
```

- framed \VerbBox** fancybox's \VerbBox may be used inside \fbox.

- indented alignment** \Verbatim, \LVerbatimInput, and \LUseVerbatim indent with horizontal space which may not line up exactly with what *pdftotext* detects. Some lines may be off slightly in their left edge.

8.3.7 mdframed package

- Pkg **mdframed** Most basic functionality is supported, including frame background colors and single-border colors and thickness, title and subtitle background colors and borders and thickness, border radius, and shadow. CSS classes are created for mdframed environments and frame titles.

- ⚠ **loading** When used, lwarp loads mdframed in HTML with framemethod=none.

- font** For title font, use

```
frametitlefont=\textbf,
```

instead of

```
frametitlefont=\bfseries,
```

where \textbf must appear just before the comma and will receive the following text as its argument (since the text happens to be between braces in the mdframed source).

Since l warp does not support \bfseries and friends, only one font selection may be made at a time.

theoremtitlefont theoremtitlefont is not supported, since the following text is not in braces in the mdframed source.

ignored options userdefinedwidth and align are currently ignored.

css classes Environments created or encapsulated by mdframed are enclosed in a <div> of class mdframed, and also class md<environmentname> for new environments.

Frame titles are placed in a <div> of class |mdframedtitle|. Subtitles are in a <div> of class |mdframedsubtitle|, and likewise for subsubtitles.

8.4 Section names

If using named HTML files, by selecting \booltrue{FileSectionNames}, the generated filenames may be simplified by using \FilenameSimplify and \FilenameNullify:

\FilenameSimplify {<text>}

To remove common short words from the automatically-generated filenames, replacing each with a single hyphen “-”, use \FilenameSimplify:

```
\FilenameSimplify*{-in-}
\FilenameSimplify*{A-}
```

The first example removes the word “in” in the middle of a filename, and the second example removes “A” at the start of the filename. The star forces the arguments to be detokenized, which is required for a plain-text comparison. (The unstarred form is used for a token-sensitive comparison, which is seldom required by the user.) After simplification, repeated hyphen characters will be further simplified to a single hyphen “-”. Finally, single hyphens at the start or end of the filename are removed.

\FilenameNullify {<macros>}

⚠ macros in section names Macro names may appear in the automatically-generated file names. To remove these, create *non-robust* nullified versions of the macros, ensuring that each line ends with a percent character % as shown below. These are placed inside \FilenameNullify, which adds them to the list of macros which are nullified during filename generation. Low-level macros such as \begingroup will cause problems when nullified. Many macros such as \textbf are already nullified. l warp also already nullifies built-in symbol and textcomp macros, including if defined by xunicode, but not all xunicode macros. See the definition of \LWR@nullfonts for a complete list.

```
\FilenameNullify{%
  \renewcommand*{\macro}[1]{#1}%
  \renewcommand*{\anothermacro}{}}%
```

⚠ duplicate filename Avoid duplicate file names. Section names at levels which result in HTML file splits must be unique. l warp will generate an error if a duplicate HTML filename is generated.

Use the optional toc caption entry parameter for formatting. Remember to `\protect` L^AT_EX commands which appear in section names and toc captions.

⚠ math in section names

If using named HTML files, in section names use paren math `\(x+y\)` instead of dollar math `$x+y$`. (Dollar math works, but appears in the filename.) Or, use a short name for the toc entry without the math, or use `\texorpdfstring`:

```
\section{A name with math
\texorpdfstring{$1+2=3$}{text description}}
```

8.5 Cross-references

labels

⚠ label characters

\nameref

⚠ empty link

Labels with special characters may be a problem. It is best to stick with alpha-numeric, hyphen, underscore, and perhaps the colon (if not French).

`\nameref` refers to the most recently-used section where the `\label` was defined. If no section has been defined before the `\label`, the link will be empty. Index entries also use `\nameref` and have the same limitation.

8.5.1 Page references

⚠ L^AT_EX page numbers

The printed page does not translate to the HTML page, so `\pageref` references are converted to parentheses containing `\pagerefPageFor`, which defaults to “see”, followed by a hyperlink to the appropriate object.

Ex:

`\ref{sec:name}` on page `\pageref{sec:name}`
in HTML becomes:

“Sec. 1.23 on page (see sec. 1.23)”.

`\pagerefPageFor` may be redefined to “page for”, empty, etc. See page 471.

8.5.2 cleveref and varioref packages

Pkg cleveref

Pkg varioref

`cleveref` and `varioref` are supported, but printed page numbers do not map to HTML, so a section name or a text phrase are used for `\cpageref` and `\cpagerefrange`. This phrase includes `\cpagerefFor`, which defaults to “for”.

⚠ cleveref page numbers

Ex:

```
\cpageref{tab:first,tab:second}
in html becomes:
“pages for table 4.1 and for table 4.2”
```

See \cpagerefFor at page 546 to redefine the message which is printed for page number references.

8.5.3 Hyperlinks, hyperref, and url

Pkg `hyperref` lwarf emulates `hyperref`, including the creation of active hyperlinks, but does not require that `hyperref` be loaded by the document.

⚠ **comments between arguments** Do not place a comment with a % character between arguments for \hyperref, etc., as it is neutralized for inclusion in HTML URLs.

lwarf can also load `url`, but `url` should not be used at the same time as `hyperref`, since they both define the `\url` command. lwarf does not (yet) attempt to convert `url` links into hyperlinks during HTML output, nor does the print version of `url` create hyperlinks.

⚠ **backref** When generating HTML, lwarf’s emulation of `hyperref` does not automatically load `backref`, so `backref` must be loaded explicitly.

8.5.4 Footnotes and page notes

lwarf uses native L^AT_EX footnote code, although with its own `\box` to avoid the L^AT_EX output routine. The usual functions mostly work as-is.

footnote numbering To have footnote numbers reset each time footnotes are printed:

```
\setcounter{footnoteReset}{1}
```

For `bigfoot`, `manyfoot`, or `perpage`:

```
\MakePerPage{footnoteX}
— or —
\MakeSortedPerPage{footnoteX}
```

The footnotes are reset when they are printed, according to section level as set by `FootnoteDepth`, which is not necessarily by HTML page. This is recommended for `\alph`, `\Alph`, or `\fnsymbol` footnotes, due to the limited number of symbols which are available.

footmisc The `footmisc` `stable` option is emulated by lwarf.

⚠ **sectioning commands** When using footnotes in sectioning commands, to generate consistent results between print and HTML, use the `footmisc` package with the `stable` option, provide a short toc entry, and `\protect` the `\footnote`:

```
\usepackage[stable]{footmisc}
...
\subsection[Subsection Name]
{Subsection Name\protect\footnote{A footnote.}}
```

memoir with footmisc **memoir**

If using **memoir** class, with which **lwarp** preloads **footmisc**, the **stable** option must be declared before **lwarp** is loaded:

```
\PassOptionsToPackage{stable}{footmisc}
\usepackage{lwarp}
...
```

Do not use a starred sectioning command. As an alternative, it may be possible to adjust **\secnumdepth** instead.

fancybox, fancyvrb **\VerbatimFootnotes** **sectioning or displaymath**

If using **fancybox** or **fancyvrb** with **\VerbatimFootnotes**, and using footnotes in a sectioning command or display math, use **\footnotemark** and **\footnotetext**:

```
\subsection[Subsection Name]
{Subsection Name\protect\footnotemark}
\footnotetext{A footnote with \verb+verbtim+.}
```

and likewise for equations or display math.

At present there is a bug such that paragraph closing tags are not present in footnotes when **\VerbatimFootnotes** are selected. The browser usually compensates.

pfnote **pfnote numbers**

While emulating **pfnote**, **lwarp** is not able to reset HTML footnote numbers per page number to match the printed version, as HTML has no concept of page numbers. **lwarp** therefore uses continuous footnote numbering even for **pfnote**.

bigfoot, manyfoot **verbatim**

Verbatim footnotes are not yet supported.

If using the **bigfoot** package, and possibly also **manyfoot**, problems may occur with counter allocation because **lwarp** uses many counters, and there is a difference in how counters numbered 256 and up are handled in **pdfLATEX**. With **bigfoot** this has been known to show up as an error related to one footnote insert being forbidden inside another. Another problem showed up as a input stack error, and which of these problems occurred depended on how many counters were allocated.

As a possible solution, try creating several new counters before defining **bigfoot** or **manyfoot** footnotes, hoping to shift the problematic counter above the 256 threshold. It may instead be necessary to use **X_{EL}LATEX** or **Lu_{EL}LATEX** instead of **pdfLATEX**.

8.5.5 xr, xr-hyper, and xcite packages

See section 5.17.

8.6 Front and back matter

8.6.1 Custom classes with multiple authors and affiliations

Some classes allow multiple authors and affiliations. Often it is possible to emulate these using a standard class along with authblk:

```
%\documentclass{customclass} % for print document  
\documentclass{article} % for html document  
  
\usepackage{lwarp}  
\begin{warpHTML}  
\usepackage{authblk}  
\let\affiliation\affil % maybe required  
\end{warpHTML}
```

8.6.2 Starred chapters and sections

The following describes \ForceHTMLPage and \ForceHTMLTOC, which may be used for endnotes, glossaries, tocbibind, bibliographies, and the index. See the following sections where applicable. Continue here if interested in the reason for adding these commands to lwarp.

Some packages use \chapter* or \section* to introduce reference material such as notes or lists, often to be placed in the back matter of a book. These starred sections are placed inline instead of on their own HTML pages, and they are not given TOC entries.

lwarp provides a method to cause a starred section to be on its own HTML page, subject to FileDepth, and also a method to cause the starred section to have its own TOC entry during HTML output.

\ForceHTMLPage To place a starred section on its own HTML page, use \ForceHTMLPage just before the \chapter* or \section*. lwarp will create a new page for the starred sectional unit.

A starred sectional unit does not have a TOC entry unless one is placed manually. The typical method using \phantomsection and \addcontentsline works for inline text but fails when the new starred section is given its own webpage after the TOC entry is created, or when creating an EPUB where the TOC entry will point to the page before the starred section. If the starred section has its own HTML page but no correct TOC entry pointing to that page, the page will be inaccessible unless some other link is created.

\ForceHTMLTOC To automatically force the HTML version of the document to have a TOC entry for a starred section, use \ForceHTMLTOC just before the \chapter* or \section*, and place \phantomsection and \addcontentsline inside a warpprint environment.

For print output, \ForceHTMLTOC and \ForceHTMLPage have no effect.

8.6.3 abstract package

Pkg abstract
 △ missing toc

If using the number option with file splits, be sure to place the table of contents before the abstract. The number option causes a section break which may cause a file split, which would put a table of contents out of the home page if it is after the abstract.

8.6.4 titling and authblk

Pkg titling
 Pkg authblk

lwarf supports the native L^AT_EX titling commands, and also supports the packages authblk and titling. If both are used, authblk should be loaded before titling.

package support
 △ load order
 \published and \subtitle

If using the titling package, additional titlepage fields for \published and \subtitle may be added by using \AddSubtitlePublished in the preamble. See section 66.8.

8.6.5 tocloft package

Opt [tocloft] titles
 Pkg tocloft
 Pkg tocloft

If using tocloft with tocbibind, anonchap, fncychap, or other packages which change chapter title formatting, load tocloft with its titles option, which tells tocloft to use standard L^AT_EX commands to create the titles, allowing other packages to work with it.

△ tocloft & other packages

8.6.6 appendix package

Pkg appendix
 △ incorrect toc link

During HTML conversion, the option toc without the option page results in a TOC link to whichever section was before the appendices environment. It is recommended to use both toc and also page at the same time.

8.6.7 pagenote package

Pkg pagenote

pagenote works as-is, but the page option is disabled.

8.6.8 endnotes package

Pkg endnotes
 table of contents

To place the endnotes in the TOC, use:

```
\usepackage{endnotes}
\appto\enoteheading{\addcontentsline{toc}{section}{\notesname}}
\renewcommand*\notesname{Endnotes} % optional
```

HTML page To additionally have the endnotes on their own HTML page, if FileDepth allows:

```
\ForceHTMLPage
\theendnotes
```

8.6.9 BibTeX

\etalchar Displays a superscript “+” to indicate “and others”.

- ⚠️ Modify *.bib** When enough authors are cited for a source, **BiBTEX** may use the \etalchar command to display a math superscript with a + character to indicate “and others”. Without modification, this will result in an “Improper \prevdepth” error. At present, lwarp requires that \etalchar be replaced by a text superscript. To do so, add to the start of the .bib file the following:

```
@PREAMBLE{"\let\etalchar\relax \newcommand{\etalchar}[1]{\textsuperscript{#1}}"}
```

8.6.10 xcite package

See section 5.17.

8.6.11 gloss package

Pkg gloss To process the HTML glossary:

- ⚠️ compiling** `bibtex <projectname>.html.gls`

8.6.12 glossaries package

Pkg glossaries
processing glossaries
 Opt GlossaryCmd
 Default: `makeglossaries`
 Opt [lwarpmk] printglossary
 Opt [lwarpmk] htmlglossary

lwarpmk has the commands `lwarpmk printglossary` and `lwarpmk htmlglossary`, which process the glossaries created by the **glossaries** package using that package’s `makeglossaries` program.

The shell command to execute is set by the **lwarp** option `GlossaryCmd`, which defaults to `makeglossaries`. The print or HTML glossary filename is appended to this command.

- ⚠️ makeglossaries not found** In some situations it may be required to modify the default command, such as to add the `perl` command in front:

```
\usepackage[
  GlossaryCmd={perl makeglossaries},
] {lwarp}
```

xindy language To set the language to use for processing glossaries with *xindy*:

```
\usepackage[
  GlossaryCmd={makeglossaries -L english},
] {lwarp}
```

Other options for `makeglossaries` may be set as well.

placement and toc options The glossaries may be placed in a numbered or unnumbered section, given a toc entry, and placed inline or on their own HTML page:

Numbered section, on its own HTML page:

```
\usepackage[xindy,toc,numberedsection=nolabel]{glossaries}
...
\printglossaries
```

Unnumbered section, inline with the current HTML page:

```
\usepackage[xindy,toc]{glossaries}
...
\printglossaries
```

Unnumbered section, on its own HTML page:

```
\usepackage[xindy,toc]{glossaries}
...
\ForceHTMLPage
\printglossaries
```

 **glossary style** The default `style=item` option for `glossaries` conflicts with `lwarp`, so the style is forced to `index` instead.

 **number list** The page number list in the printed form would become `\nameref`s in `HTML`, which could become a very long string if many items are referenced. For now, the number list is simply turned off.

print/HTML versions The print and `HTML` versions of the glossary differ in their internal page numbers. Separate commands for generating print and `HTML` glossaries are used, even though the page number is currently ignored.

8.6.13 nomencl package

Pkg `nomencl` To process the `HTML` nomenclature:

```
makeindex <project>_html.nlo -s nomencl.list -o <project>_html.nls
```

8.6.14 Indexing overview

There are many ways to process indexes for a `LATEX` document, including native `LATEX` capabilities, a number of packages and classes, the possible availability of shell escape and `latexmk`, and the need to process print and `HTML` versions. `lwarp` attempts to provide easy recompilation of indexes along with the rest of the document, but the various indexing options must be set correctly. Numerous examples are given below. Some differ in minor details, so the important parts are highlighted in red, and options are in green.

Once set up properly, the entire document may be recompiled with `lwarpmk print` and `lwarpmk html`. In some cases, it will also be necessary to compile the indexes with `lwarpmk printindex` and `lwarpmk htmlindex`. A recompile may then be forced with `lwarpmk print1` and `lwarpmk html1`.

manual processing The user may continue to process indexes manually or by shell script without the use of `lwarpmk`, but adjustments will be required to process `HTML` indexes as well. In

general, *.idx and *.ind files will be accompanied by *_html.idx and *_html.ind files.

- custom index style** If using a custom indexing style file, see sections [8.6.20](#) and [8.6.21](#).
- source code** See section [76](#) for lwarf's core index and glossary code, section [285](#) for index, section [443](#) for splitidx, section [284](#) for imakeidx, section [479](#) for tocbibind, and section [536.17](#) for memoir's indexing patches.

8.6.15 Indexing with basic L^AT_EX and makeidx

lwarpmk processing The following allow the user to process indexes automatically, or using *lwarpmk*'s commands:

Enter ⇒ **lwarpmk printindex**

Enter ⇒ **lwarpmk htmlindex**

For a single index using *makeindex*:

```
\usepackage[makeindex, latexmk] {lwarf}
```

The usual .idx and .ind files will be used, along with the new lwarf.ist style file. When creating the HTML index, “_html” is automatically appended to each of the names.

lwarpmk will use *latexmk* if specified, in which case *latexmk* will create the index automatically. Otherwise, use

Enter ⇒ **lwarpmk printindex**

Enter ⇒ **lwarpmk htmlindex**

to compile the indexes.

For a single index using *xindy*:

```
\usepackage[
    xindy,
    xindyLanguage=english,                                <optional>
    xindyCodepage=utf8,                                 <optional>
    latexmk                                              <optional>
]{lwarf}
```

The usual .idx and .ind files will be used, along with the new lwarf.xdy style file.

lwarpmk will use *latexmk* if specified, in which case *latexmk* will create the index automatically. Otherwise, use

Enter ⇒ **lwarpmk printindex**

Enter ⇒ **lwarpmk htmlindex**

to compile the indexes.

8.6.16 Indexing with index

lwarf is told how to use *makeindex* using the `PrintIndexCmd` and `HTMLIndexCmd` options. The file `lwarf.ist` is specified, which generates index letter heads for print output and also allows special HTML formatting for HTML output.

For multiple indexes using *makeindex* and `index`:

(Assuming that the second index has file extensions `.sist` and `.sind`)

```
\usepackage[
    makeindex, latexmk,
    PrintIndexCmd={
        makeindex -s lwarf.ist <projectname>.idx ;
        makeindex -s lwarf.ist
        -o <projectname>.sind <projectname>.sidx
    },
    HTMLIndexCmd={
        makeindex -s lwarf.ist <projectname>_html.idx ;
        makeindex -s lwarf.ist
        -o <projectname>_html.sind <projectname>_html.sidx
    }
]{lwarf}
\usepackage{index}
...
\makeindex
\newindex{secondname}{sidx}{sind}{Second Index}
```

⚠ **WINDOWS**

For Windows, replace the two “;” characters with “&”.

When creating the HTML index, “_html” is automatically appended to the index filenames.

Use

```
Enter ⇒ lwarpmk printindex
Enter ⇒ lwarpmk htmlindex
```

to compile the indexes.

If the `latexmk` option is selected for lwarf, `latexmk` will compile the document but will *not* compile the indexes. `lwarpmk printindex` and `lwarpmk htmlindex` will still be required.

8.6.17 Indexing with `splitidx`

lwarf is told how to use *splitindex* using the `PrintIndexCmd` and `HTMLIndexCmd` options. The file `lwarf.ist` is specified, which generates index letter heads for print output and also allows special HTML formatting for HTML output.

If the `latexmk` option is selected for lwarf, `latexmk` will compile the document but will *not* compile the indexes. `lwarpmk printindex` and `lwarpmk htmlindex` will still be required.

⚠ \thepage

When using `\AtWriteToIndex` or `\AtNextWriteToIndex`, the user must not refer to

\thepage during HTML output, as the concept of a page number is meaningless. Instead, do

```
\addtocounter{LWR@autoindex}{1}
\lWR@new@label{\lWRindex-\arabic{LWR@autoindex}}
```

where the \index-like action occurs, and then refer to \arabic{LWR@autoindex} instead of \thepage where the reference should occur.

See section 536.17 in the lwarp-patch-memoir package for the \@@wrspindexhyp macro as an example.

For multiple indexes using *makeindex* and *splitidx*:

```
\usepackage[
    makeindex, latexmk,
    PrintIndexCmd={
        splitindex <projectname> -- -s lwarp.ist
    },
    HTMLIndexCmd={
        splitindex <projectname>_html -- -s lwarp.ist
    }
]{lwarp}
\usepackage{splitidx}
...
\makeindex
\newindex[Second Index]{secondname}
```

When creating the HTML index, “_html” is automatically appended to each of the names.

Use

```
Enter ⇒ lwarpmk printindex
Enter ⇒ lwarpmk htmlindex
```

to compile the indexes.

For multiple indexes using *xindy* and *splitidx*:

```
\usepackage[
    xindy, latexmk,
    PrintIndexCmd={
        splitindex -m xindy <projectname> -- -M lwarp.xdy
        -L english -C utf8                                <optional>
    },
    HTMLIndexCmd={
        splitindex -m xindy <projectname>_html -- -M lwarp.xdy
        -L english -C utf8                                <optional>
    }
]{lwarp}
\usepackage{splitidx}
...
\makeindex
\newindex[Second Index]{secondname}
```

When creating the *HTML* index, “_html” is automatically appended to each of the names.

Use

```
Enter ⇒ lwarpmk printindex
Enter ⇒ lwarpmk htmlindex
```

to compile the indexes.

8.6.18 Indexing with *imakeidx*

Due to the number of methods which may be used to process multiple indexes, the options for style file and *xindy* language and codepage must be specified in one of several different ways. These are described in detail later in this section, but are summarized here.

If shell escape is used, *imakeidx* will automatically compile the indexes by itself. Options specifying a custom style file and *xindy* language and codepage must be specified for each *\makeindex* command using its *options=* option, which must include *lwarp*'s special *lwarp.ist* or *lwarp.xdy* file, or a file based on them. If using a custom indexing style file, see sections 8.6.20 and 8.6.21. The *splitindex* option is also available if shell escape is used, in which case the *splitidx* package and *splitindex* program will also be used.

If shell escape is not possible, *latexmk* may be used to automatically compile the indexes. The style, language, and codepage options are specified with *lwarp*'s *makeindexStyle*, *xindyStyle*, *xindyLanguage*, and *xindyCodepage* options. These are passed to *latexmk* by *lwarpmk*'s ***lwarpmk printindex*** and ***lwarpmk htmlindex*** commands.

Where shell escape and *latexmk* are not possible, *lwarpmk* may be used to manually compile the indexes. *lwarp*'s *PrintIndexCmd* and *HTMLIndexCmd* options are used.

For a single or multiple indexes using *makeindex* and *imakeidx*:

The index style `lwarf.ist` is automatically used for HTML output. This file turns on letter headings, so it may be desirable to specify it as an option, in which case it will also be used for print output, which will help match the print and HTML output.

```
\usepackage[makeindex,latexmk]{lwarf}
\usepackage[makeindex]{imakeidx}
...
\makeindex[options={-s lwarf.ist}]
\makeindex[name=secondname,options={-s lwarf.ist}]
```

imakeidx will automatically compile the indexes. Shell escape is not required while using *makeindex*. `latexmk` may be specified, and if so it will be used for `lwarpmk print` and `lwarpmk html`, but *imakeidx* will actually create the indexes.

For a single or multiple indexes using *makeindex* and *splitindex* with *imakeidx*:

The index style `lwarf.ist` is automatically used for HTML output. This file turns on letter headings, so it may be desirable to specify it as an option, in which case it will also be used for print output, which will help match the print and HTML output.

```
\usepackage[makeindex,latexmk]{lwarf}
\usepackage[makeindex,splitindex]{imakeidx}
...
\makeindex[options={-s lwarf.ist}]
\makeindex[name=secondname,options={-s lwarf.ist}]
```

enable shell escape

Shell escape is required while using *splitindex*. For the first compile, use

```
Enter ⇒ pdflatex --shell-escape projectname.tex
Enter ⇒ pdflatex --enable-write18 projectname.tex (MiKTeX)
```

or similar with *xelatex* or *lualatex*. `lwarf` will remember that shell escape was used.

imakeidx will automatically execute *splitindex*, and will also use *makeindex* to compile the indexes.

`latexmk` may be specified, and if so it will be used for `lwarpmk print` and `lwarpmk html`, but *imakeidx* will actually create the indexes.

For multiple indexes using *xindy* and *imakeidx*, using shell escape:

Options may be given to *imakeidx*'s `\makeindex` command. The style file `lwarf.xdy` is automatically used for HTML output, and is not necessary for print output since the output will be similar. If language or codepage must be set, they should be specified as options for `\makeindex`, since *imakeidx* will process the indexes.

```
\usepackage[xindy,latexmk] {lwarp}
\usepackage[xindy,splitindex]{imakeidx}
...
\makeindex[
  options={ -M lwarp.xdy -L english -c utf8 }
]
\makeindex[
  name=secondname,
  options={ -M lwarp.xdy -L english -c utf8 }
]
```

⚠ enable shell escape

For the first compile, use

```
Enter ⇒ pdflatex --shell-escape projectname.tex
Enter ⇒ pdflatex --enable-write18 projectname.tex (MiKTeX)
```

or similar with *xelatex* or *lualatex*. *lwarp* will remember that shell escape was used.

imakeidx will automatically execute *splitindex* if selected, and will also use *xindy* to compile the indexes.

If selected, *latexmk* will automatically recompile the entire document as necessary.

For indexes using *xindy* and *imakeidx*, without shell escape, but with *latexmk*:

lwarp's options are used, and are passed to *latexmk*.

```
\usepackage[
  xindy,
  xindyLanguage=english,                                <optional>
  xindyCodepage=utf8,                                 <optional>
  latexmk,
]{lwarp}
\usepackage[xindy]{imakeidx}
...
\makeindex
\makeindex[name=secondname]
```

latexmk will create the indexes automatically when **lwarpmk print** and **lwarpmk html** are executed.

For indexes using *xindy* and *imakeidx*, without shell escape, and *without latexmk*:

lwarpmk must be told how to create the indexes:

```
\usepackage[
    xindy,
    PrintIndexCmd={
        xindy -M lwarp.xdy -L english -C utf8
        <projectname>.idx ;
        xindy -M lwarp.xdy -L english -C utf8
        secondname.idx
    },
    HTMLIndexCmd={
        xindy -M lwarp.xdy -L english -C utf8
        <projectname>_html.idx ;
        xindy -M lwarp.xdy -L english -C utf8
        secondname_html.idx
    }
]{lwarp}
\usepackage[xindy]{imakeidx}
...
\makeindex
\makeindex[name=secondname]
```

⚠ WINDOWS

For Windows, replace the two “;” characters with “&”.

<projectname> is the \jobname: if compiling “name.tex”, use the filenames name.idx and name_html.idx.

Use

Enter ⇒ **lwarpmk printindex**

Enter ⇒ **lwarpmk htmlindex**

to compile the indexes.

8.6.19 Indexes with memoir

For a single index with memoir and makeindex:

```
\documentclass{memoir}
\usepackage[makeindex, latexmk]{lwarp}
...
\makeindex
```

The usual .idx and .ind files will be used, along with the *lwarp.ist* style file.

lwarpmk will use *latexmk* if specified, in which case *latexmk* will create the index automatically. Otherwise, use

Enter ⇒ **lwarpmk printindex**

Enter ⇒ **lwarpmk htmlindex**

to compile the indexes.

For multiple indexes with memoir and makeindex, using *latexmk*:

lwarp's options are used, and are passed to *latexmk*.

```
\documentclass{memoir}
\usepackage[makeindex, latexmk]{lwarp}
...
\makeindex
\makeindex[secondname]
```

lwarpmk will use *latexmk* to create the indexes automatically when the user executes **lwarpmk print** and **lwarpmk html**.

For multiple indexes with memoir and makeindex, without *latexmk*:

lwarpmk must be told how to create the indexes:

```
\documentclass{memoir}
\usepackage[
  makeindex,
  PrintIndexCmd={
    makeindex -s lwarp.ist <projectname>.idx ;
    makeindex -s lwarp.ist secondname.idx
  },
  HTMLIndexCmd={
    makeindex -s lwarp.ist <projectname>_html.idx ;
    makeindex -s lwarp.ist secondname_html.idx
  }
]{lwarp}
...
\makeindex
\makeindex[secondname]
```

For Windows, replace the two ";" characters with "&".

<projectname> is the \jobname: if compiling "name.tex", use the filenames name.idx and name_html.idx.

Use

```
Enter ⇒ lwarpmk printindex
Enter ⇒ lwarpmk htmlindex
```

to compile the indexes.

For a single index with memoir and xindy:

```
\documentclass{memoir}
\usepackage[
    xindy,
    xindyLanguage=english,                                     <optional>
    xindyCodepage=utf8,                                       <optional>
    latexmk                                                 <optional>
]{lwarp}
...
\xindyindex
\makeindex
```

The usual .idx and .ind files will be used, along with the `lwarp.xdy` style file.

`lwarpmk` will use `latexmk` if specified, in which case `latexmk` will create the index automatically. Otherwise, use

```
Enter ⇒ lwarpmk printindex
Enter ⇒ lwarpmk htmlindex
```

to compile the indexes.

For multiple indexes with memoir and xindy, using latexmk:

`lwarp`'s options are used, and are passed to `latexmk`.

```
\documentclass{memoir}
\usepackage[
    xindy,
    xindyLanguage=english,                                     <optional>
    xindyCodepage=utf8,                                       <optional>
    latexmk
]{lwarp}
...
\xindyindex
\makeindex
\makeindex[secondname]
```

`lwarpmk` will use `latexmk` to create the indexes automatically.

For multiple indexes with memoir and xindy, *without latexmk*:

lwarpmk must be told how to create the indexes:

```
\documentclass{memoir}
\usepackage[
    xindy,
    PrintIndexCmd={
        xindy -M l warp.xdy -L english -C utf8
        <projectname>.idx ;
        xindy -M l warp.xdy -L english -C utf8
        secondname.idx
    },
    HTMLIndexCmd={
        xindy -M l warp.xdy -L english -C utf8
        <projectname>_html.idx ;
        xindy -M l warp.xdy -L english -C utf8
        secondname_html.idx
    }
]{l warp}
...
\xindyindex
\makeindex
\makeindex[secondname]
```

⚠ WINDOWS

For Windows, replace the four “;” characters with “&”.

<projectname> is the \jobname: if compiling “name.tex”, use the filenames name.idx and name_html.idx.

Use

```
Enter ⇒ l warpmk printindex
Enter ⇒ l warpmk htmlindex
```

to compile the indexes.

8.6.20 Using a custom *makeindex* style file

Prog makeindex When using *makeindex*, *lwarpmk* uses the file l warp.ist to process the index. This file is over-written by *l warp* whenever a print version of the document is processed.
File l warp.ist

To use a custom *makeindex* style file:

1. Copy l warp.ist to a new filename such as projectname.ist
2. Make changes to projectname.ist. Keep the lines which refer to \hyperindexref. These lines creates the hyperlinks for the HTML index. During print output \hyperindexref becomes a null function.
3. In the document source use the *makeindexStyle* option for *l warp*:

```
\usepackage[
    ... other options ...
    \textred{makeindexStyle=projectname.ist},
]{l warp}
```

Opt makeindexStyle

Likewise, refer to the custom style file if using `\PrintIndexCmd`, `\HTMLIndexCmd`, or `\LatexmkIndexCmd`.

- Recompile the print version, which causes `lwarf` to rewrite the `lwarpmk.conf` configuration file. This tells `lwarpmk` to use the custom `projectname.ist` file instead of `lwarf.ist`.

8.6.21 Using a custom *xindy* style file

Prog xindy When using *xindy*, `lwarpmk` uses the file `lwarf.xdy` to process the index. This file is over-written by `lwarf` whenever a print version of the document is processed.

To use a custom *xindy* style file:

- Copy `lwarf.xdy` to a new filename such as `projectname.xdy`
- Make changes to `projectname.xdy`.

Keep the lines which refer to `\hyperindexref`:

```
(define-attributes ((hyperindexref)))
(markup-locref :open "\hyperindexref{" :close "}")
...
(markup-locref :open "\textit{\hyperindexref{" :close "}}" :attr "textit")
```

These lines create the hyperlinks for the HTML index. During print output `\hyperindexref` becomes a null function.

To create custom styles, refer to the lines for `\textbf` and `\textit`.

Opt xindyStyle 3. In the document source use the `xindyStyle` option for `lwarf`:

```
\usepackage[
    ... other options ...
    \textred{xindyStyle=projectname.xdy},
]{lwarf}
```

Likewise, refer to the custom style file if using `\PrintIndexCmd`, `\HTMLIndexCmd`, or `\LatexmkIndexCmd`.

- Recompile the print version, which causes `lwarf` to rewrite the `lwarpmk.conf` configuration file. This tells `lwarpmk` to use the custom `projectname.xdy` file instead of `lwarf.xdy`.

8.6.22 Additional indexing limitations

⚠ xindy with hyperref *xindy* and `hyperref` may not work well together for print output with “see”, “see also”, reference ranges, or stylized index references. It may be necessary to turn off hyper-referencing for indexes:

```
\usepackage[hyperindex=false]{hyperref}
```

⚠ empty index If an HTML index is empty, it may be necessary to add the following before `lwarf` is

loaded:

```
\usepackage{morewrites}
\morewritessetup{allocate=10}
...
\usepackage{lwarp}
```

makeindex custom display styles When using *makeindex*, custom display styles are possible:

```
\begin{warpprint}
\newcommand{\notesstyle}[1]{#1nn}
\end{warpprint}

\begin{warpHTML}
\makeatletter
\newcommand{\notesstyle}[1]{\LWR@doindexentry{#1} notes }
\makeatother
\end{warpHTML}
...
A sentence.\index{key|notesstyle}
```

xindy custom display styles For custom styles with *xindy*, see *lwarp.xdy* for \textbf and \textit as examples.

8.6.23 Index positions, toc, tocbibind

placement and toc options An index may be placed inline with other HTML text, or on its own HTML page:

Pkg makeidx **Inline, with a manual toc entry:**

A commonly-used method to introduce an index in a L^AT_EX document:

```
\cleardoublepage
\phantomsection
\addcontentsline{toc}{section}{\indexname} or chapter
\printindex
```

Pkg makeidx **On its own HTML page, with a manual toc entry:**

```
\begin{warpprint}
\cleardoublepage
\phantomsection
\addcontentsline{toc}{section}{\indexname} or chapter
\end{warpprint}
\ForceHTMLPage
\ForceHTMLTOC
\printindex
```

Pkg tocbibind **Inline, with an automatic toc entry:**

The *tocbibind* package may be used to automatically place an entry in the toc.

```
\usepackage[nottoc]{tocbibind}
...
\cleardoublepage
\phantomsection % to fix print-version index link
\printindex
```

Pkg tocbibind **On its own HTML page, with an automatic TOC entry:**

```
\usepackage[nottoc]{tocbibind}
...
\cleardoublepage
\phantomsection % to fix print-version index link
\ForceHTMLPage
\printindex
```

Opt [tocbibind] numindex **numbered index section** Use the `tocbibind numindex` option to generate a numbered index. Without this option, the index heading has no number.

Other packages, such as `imakeidx`, may also have options for including the index in the Table of Contents.

Pkg tocloft If using `tocloft` with `tocbibind`, `anonchap`, `fncychap`, or other packages which change chapter title formatting, load `tocloft` with its `titles` option, which tells `tocloft` to use standard L^AT_EX commands to create the titles, allowing other packages to work with it.

⚠ **tocloft & other packages**

8.7 Math

8.7.1 Math in section names

⚠ **math in section names**

If using named HTML files, in section names use paren math `\(x+y\)` instead of dollar math `$x+y$`. (Dollar math works, but appears in the filename.) Or, use a short name for the TOC entry without the math, or use `\texorpdfstring`:

```
\section{A name with math
\texorpdfstring{$1+2=3$}{text description}}
```

8.7.2 Rendering tradeoffs

Math rendering Math may be rendered as SVG graphics or using the MATHJAX JavaScript display engine.

SVG files Rendering math as images creates a new SVG file for each expression, except that an MD5 hash is used to combine identical duplicates of the same inline math expression into a single file, which must be converted to SVG only once. Display math is still handled as individual files, since it may contain labels or references which are likely to change.

SVG inline The SVG images are currently stored separately, but they could be encoded in-line directly into the HTML document. This may reduce the number of files and potentially speed loading the images, but slows the display of the rest of the document before the images are loaded.

PNG files Others L^AT_EX-to-HTML converters have used PNG files, sometimes pre-scaled for print resolution but displayed on-screen at a scaled down size. This allows high-quality print output at the expense of larger files, but SVG files are the preferred approach for scalable graphics.

MathML Conversion to MathML might be a better approach, among other things allowing a more compact representation of math than SVG drawings. Problems with MathML include limited browser support and some issues with the fine control of the appearance of the result. Also see section 10 regarding EPUB output with MATHJAX.

8.7.3 svg option

SVG math option For SVG math, math is rendered as usual by L^AT_EX into the initial PDF file using the current font¹⁴, then is captured from the PDF and converted to SVG graphics via a number of utility programs. The SVG format is a scalable-vector web format, so math may be typeset by L^AT_EX with its fine control and precision, then displayed or printed at any size, depending on (sometimes broken) browser support. An HTML alt attribute carries the L^AT_EX code which generated the math, allowing copy/paste of the L^AT_EX math expression into other documents.

SVG image font size For the lateximage environment, the size of the math and text used in the SVG image may be adjusted by setting \LateximageFontSizeName to a font size name—*without the backslash*, which defaults to:

```
\renewcommand{\LateximageFontSizeName}{\normalsize}
```

For inline SVG math, font size is instead controlled by \LateximageFontSizeScale, which defaults to:

```
\newcommand*{\LateximageFontSizeScale}{.75}
```

SVG math copy/paste For SVG math, text copy/paste from the HTML <alt> tags lists the equation number or tag for single equations, along with the L^AT_EX code for the math expression. For AMS environments with multiple numbers in the same environment, only the first and last is copied/pasted, as a range. No tags are listed inside a starred AMS environment, although the \tag macro will still appear inside the L^AT_EX math expression.

⚠ SVG math in TeX boxes SVG math does not work inside TeX boxes, since a \newpage is required before and after each image.

8.7.4 MATHJAX option

MATHJAX math option The popular MATHJAX alternative (mathjax.org) may be used to display math.

Prog MathJax

When MATHJAX is enabled, math is rendered twice:

1. As regular L^AT_EX PDF output placed inside an HTML comment, allowing equation numbering and cross referencing to be almost entirely under the control of L^AT_EX, and
2. As detokenized printed L^AT_EX commands placed directly into the HTML output for interpretation by the MATHJAX display scripts. An additional script is used to pre-set the equation number format and value according to the current L^AT_EX

¹⁴See section 521 regarding fonts and fractions.

values, and the MATHJAX cross-referencing system is ignored in favor of the LATEX internal system, seamlessly integrating with the rest of the LATEX code.

8.7.5 Customizing MATHJAX

MATHJAX does not have preexisting support every possible math function. Additional MATHJAX function definitions may be defined. These will be declared at the start of each HTML page, and thus will have a global effect.

Examples:

```
\CustomizeMathJax{
    \newcommand{\expval}[1]{\langle#1\rangle}
    \newcommand{\abs}[1]{\lvert#1\rvert}
}
\CustomizeMathJax{\newcommand{\arsinh}{\text{arsinh}}}
\CustomizeMathJax{\newcommand{\arcosh}{\text{arcosh}}}
\CustomizeMathJax{\newcommand{\NN}{\mathbb{N}}}
```

8.7.6 MATHJAX limitations

MATHJAX limitations

Prog MathJax

- MATHJAX itself does not support subequations. This may be improved by parsing the LATEX math expression to manually insert tags, but this has not yet been done.

footnotes in math

lateximage

- Footnotes inside equations are not yet supported while using MATHJAX.

- Math appearing inside a lateximage, and therefore also inside a Tikz or picture environment, is rendered as SVG math even if MATHJAX is used in the rest of the document.

siunitx

⚠ siunitx inside an equation

- Usage of siunitx inside a math equation is supported via a third-party MATHJAX extension. While inside a math expression, do not use \SI or \si inside \text, where it will be rendered as normal text.

<https://github.com/burnpanck/MathJax-siunitx>

Also see section 8.7.11.

tabbing

⚠ other macros and packages

- A tabbing environment is emulated using an HTML <pre>. While MATHJAX is enabled inside tabbing, the browser may not correctly render the horizontal alignment of the math and text following after on the same line.

- Other math-related macros and packages are not supported by MATHJAX, including \ensuremath and \biggdelim, along with occasionally-used macros such as \relax. lwarp emulates footnotes, units, and nicefrac for MathJax.

8.7.7 Catcode changes

preamble macros with math

The math shift character \$ is not set for HTML output until after the preamble. Macros defined in the preamble which contain \$ must be enclosed between \StartDefiningMath and \StopDefiningMath to temporarily change to the HTML meaning of \$:

```
\StartDefiningMath
\newcommand{...}
\StopDefiningMath
```

As an alternative, use \(` and \)` instead of \$, in which case \StartDefiningMath and \StopDefiningMath are not necessary.

If a package defines macros using \$, it may be necessary to use \StartDefiningMath and \StopDefiningMath before and after loading the package.

8.7.8 Complicated inline math objects

\inlinemathnormal \inlinemathother

An inline math expression is usually converted to a reusable hashed SVG math image, or a MathJax expression. The hash or expression depends on the contents of the math expression. In most cases this math expression is static, such as \$x+1\$, so the image can be reused for multiple instances of the same expression. In some cases, the math expression includes a counter or other object which may change between uses. Another problem is complicated contents which do not expand well in an alt tag. The macro \inlinemathother may be used before a dynamic math expression, and \inlinemathnormal after. Doing so tells l warp to use an unhashed SVG math image, even if MathJax is in use. See section 44.

changing contents

complicated alt tag

8.7.9 Complicated display math objects

\displaymathnormal

By default, or when selecting \displaymathnormal, MATHJAX math display environments print their contents as text into HTML, and SVG display math environments render their contents as SVG images and use their contents as the alt tag of HTML output. To do so, the contents are loaded into a macro for reuse. In some cases, such as complicated Tikz pictures, compilation will fail.

\displaymathother MathJax unsupported complicated alt tag

When selecting \displaymathother, it is assumed that the contents are more complicated than “pure” math. An example is an elaborate Tikz picture, which will not render in MATHJAX and will not make sense as an HTML alt tag. In this mode, MATHJAX is turned off, math display environments become SVG images, even if MATHJAX is selected, and the HTML alt tags become simple messages. The contents are internally processed as an environment instead of a macro argument, so complicated objects such as Tikz pictures are more likely to compile successfully.

8.7.10 ntheorem package

Pkg ntheorem

⚠ Font control

This conversion is not total. Font control is via css, and the custom L^AT_EX font settings are ignored.

⚠ Equation numbering

`ntheorem` has a bug with equation numbering in \mathcal{AMS} environments when the option `thref` is used. `l warp` does not share this bug, so equations with `\split`, etc, are numbered correctly with `l warp`'s HTML output, but not with the print output. It is recommended to use `cleveref` instead of `ntheorem`'s `thref` option.

8.7.11 siunitx package

Pkg `siunitx`
 `fractions`

Due to `pdftotext` limitations, fraction output is replaced by symbol output for per-mode and quotient-mode.

⚠ math mode required

Some units will require that the expression be placed inside math mode.

NOTE: As of this writing, the `siunitx` extension for MATHJAX is not currently hosted at any public CDN, thus `siunitx` is not usable with MATHJAX unless a local copy of this extension is created first. See `\MathJaxFilename` to select a custom MathJax script.

⚠ tabular

Tabular S columns are rendered as simple c columns, and tabular s columns are not supported. These may be replaced by c columns with each cell contained in `\num` or `\si`.

8.7.12 units and nicefrac packages

Pkg `units`
Pkg `nicefrac`

`units` and `nicefrac` work with `l warp`, but MATHJAX does not have an extension for `units` or `nicefrac`. These packages do work with `l warp`'s option `svgmath`.

8.7.13 newtxmath package

Pkg `newtxmath`

The proper load order is:

⚠ loading sequence

```
...
\usepackage{l warp}
...
\usepackage{amsthm}
\usepackage{newtxmath}
...
```

8.8 Graphics

Pkg `graphics`

Avoid using the `\includegraphics scale` option. Change:

Pkg `graphicx`

```
\includegraphics[scale=<xx>]{...}
```

⚠ scale

to:

```
\includegraphics[width=<yy>\linewidth]{...}
```

`\includegraphics` file
formats

For `\includegraphics` with .pdf or .eps files, the user must provide a .pdf or .eps

image file for use in print mode, and also a .svg, .png, or .jpg version of the same image for use in HTML.

```
\includegraphics{filename} % print:.pdf/.eps HTML:.svg, etc.
```

For print output, l warp will automatically choose the .pdf or .eps format if available, or some other format otherwise. For HTML, one of the other formats is used instead.

If a .pdf or .eps image is referred to with its file extension, the extension will be changed to .svg for HTML:

```
\includegraphics{filename.pdf} % uses .svg in html  
\includegraphics{filename.eps} % uses .svg in html
```

Prog pdftocairo To convert a PDF image to SVG, use the utility *pdftocairo*:

PDF to SVG

Enter ⇒ **pdftocairo -svg filename.pdf**

Prog l warpmk pdftosvg For a large number of images, use *l warpmk*:

Enter ⇒ **l warpmk pdftosvg *.pdf (or a list of filenames)**

Prog l warpmk epstopdf For EPS images converted to PDF using the package *epstopdf*, use

epstopdf

epstopdf package

to convert to SVG images.

DVI latex When using DVI *latex*, it is necessary to convert EPS to PDF and then to SVG:

Enter ⇒ **l warpmk epstopdf *.eps (or a list of filenames)**

Enter ⇒ **l warpmk pdftosvg *.pdf (or a list of filenames)**

PNG and JPG

For PNG or JPG while using *pdflatex*, *lualatex*, or *xelatex*, the same file may be used in both print or HTML versions, and may be used with a file extension, but will also be used without the file extension if it is the only file of its base name.

GIF

GIF files may be used for HTML, but another format must also be provided for print output.

file extension priorities

If a file extension is not used, for HTML the file extension priorities are: SVG, GIF, PNG, then JPG.

⚠ graphics vs. graphicx

⚠ viewport

⚠ viewport units

If using the older *graphics* syntax, use both optional arguments for *\includegraphics*. A single optional parameter is interpreted as the newer *graphicx* syntax. Note that viewports are not supported by l warp—the entire image will be shown.

For *\includegraphics*, avoid px and % units for width and height, or enclose them inside *warpHTML* environments. For font-proportional image sizes, use ex or em. For fixed-sized images, use cm, mm, in, pt, or pc. Use the keys *width=.5\linewidth*, or similar for *\textwidth* or *\textheight* to give fixed-sized images proportional to a 6 by 9 inch text area. Do not use the *scale* option, since it is not well supported by HTML browsers.

options \includegraphics accepts width and height, origin, rotate and scale, plus new class and alt keys.

HTML class With HTML output, \includegraphics accepts an optional class=xyz keyval combination, and if this is given then the HTML output will include that class for the image. The class is ignored for print output.

HTML alt tags Likewise, the \includegraphics alt key adds an HTML alt tag to an image, and is ignored for print output. If not assigned, each image is given an alt tag according to \ImageAltText.

\rotatebox \rotatebox accepts the optional origin key.

⚠ browser support \rotatebox, \scalebox, and \reflectbox depend on modern browser support. The css3 standard declares that when an object is transformed the whitespace which they occupied is preserved, unlike LATEX, so expect some ugly results for scaling and rotating.

8.8.1 tikz package

Pkg tikz If using display math with tikzpicture or \tikz, along with matrices with the & character, the document must be modified as follows:

⚠ displaymath and matrices

```
\usepackage{tikz}
\tikzset{every picture/.style={ampersand replacement=\&}}
```

and each instance of & in the tikz expression must be replaced with \&.

8.8.2 grffile package

Pkg grffile grffile is supported as-is. File types known to the browser are displayed, and unknown file types are given a link. Each PDF image for print mode should be accompanied by an SVG, PNG, or JPG version for HTML.

8.8.3 color package

Pkg color color is superceded by xcolor, and lwarp requires several of the features of xcolor. When color is requested, xcolor is loaded as well.

8.8.4 xcolor package

Pkg xcolor \colorboxBlock and \fcolorboxBlock are provided for increased HTML compatibility, and they are identical to \colorbox and \fcolorbox in print mode. In HTML mode they place their contents into a <div> instead of a . These <div>s are set to display: inline-block so adjacent \colorboxBlocks appear side-by-side in HTML, although text is placed before or after each.

Print-mode definitions for `\colorboxBlock` and `\fcolorboxBlock` are created by `l warp`'s core if `xcolor` is loaded.

<code>background: none</code>	<code>\fcolorbox</code> and <code>\fcolorboxBlock</code> allow a background color of <code>none</code> , in which case only the frame is drawn, which can be useful for HTML.
<code>color support</code>	Color definitions, models, and mixing are fully supported without any changes required.
<code>colored tables</code>	<code>\rowcolors</code> is supported, except that the optional argument is ignored so far.
<code>colored text and boxes</code>	<code>\textcolor</code> , <code>\colorbox</code> , and <code>\fcolorbox</code> are supported.
<code>\color</code> and <code>\pagecolor</code>	<code>\color</code> and <code>\pagecolor</code> are ignored. Use <code>css</code> or <code>\textcolor</code> where possible.

8.8.5 `epstopdf` package

Pkg `epstopdf` Images with an `.eps` extension will be converted to `.pdf`. The `HTML` output uses the `.svg` version, so use

Enter ⇒ `l warpmk pdftosvg <listofPDFfiles>`

to generate `.svg` versions.

8.8.6 `pstricks` package

Pkg `pstricks` All `pstricks` content should be contained inside a `pspicture` environment.

⚠ `use pspicture`

8.8.7 `pdftricks` package

Pkg `pdftricks` The `pdftricks` image files `<jobname>-fig*.pdf` must be converted to `.svg`, or else a missing file error will occur. The image files must also be converted again whenever they change. To convert the images:

Enter ⇒ `l warpmk pdftosvg <jobname>-fig*.pdf`

8.8.8 `psfrag` package

Pkg `psfrag` The `psfrags` environment is modified to use `lateximage` to encapsulate the image.

⚠ `use psfrags` Always use a `psfrags` environment to contain any local `\psfrag` macros and the associated `\includegraphics` or `\epsfig` calls. Outside of a `psfrags` environment, `psfrags` adjustments will not be seen by `l warp`.

⚠ Tip: Use a mono-spaced font for the tags in the `EPS` file.

8.8.9 pstool package

Pkg pstool \graphicspath is ignored, and the file directory must be stated.

⚠ path and filename The filename must not have a file extension.

Use

Enter ⇒ **l warpmk html**

followed by

Enter ⇒ **l warpmk limages**

8.8.10 asymptote package

Pkg asymptote To compile:

```
pdflatex project.tex
asy project-*.asy
pdflatex project.tex

l warpmk print
asy project-*.asy
l warpmk print1
l warpmk print1

l warpmk html
asy project_html-*.asy
l warpmk html1
l warpmk html1
l warpmk limages
```

8.8.11 overpic package

Pkg overpic The macros \overpicfontsize and \overpicfontskip are used during HTML generation. These are sent to \fontsize to adjust the font size for scaling differences between the print and HTML versions of the document. Renew these macros before using the overpic and Overpic environments.

⚠ scaling

8.8.12 Multimedia packages

Pkg multimedia The packages multimedia, movie15, and media9 are supported.

Pkg movie15

HTML5 <audio> and <video> objects are created for .mp3 and .mp4 files.

Pkg media9

HTML5 <embed> objects are created for http and ftp links.

\href links are created for other media types. (Unfortunately, there is not much overlap between the file types supported for print output and the file types supported by HTML5.)

For media9, a multimedia object is inserted for each addresource=, as well as each flashvars source= and src=. This may result in duplicate objects.

Undesired objects may be nullified by placing them inside \warpprintonly or the warpprint environment.

Each HTML multimedia object includes the poster text, except for <embed> objects. For movie15, the text option is supported to specify the poster text.

The width, height, and totalheight options are supported. The HTML object is scaled according to the display width, correctly compensating for either tall or wide viewports.

Other options are ignored.

media9 \addmediopath is supported. It is assumed that the same path structure will exist for the HTML document.

HTML5 media controls are always specified for each <audio> and <video> object.

media9 slideshows are not supported.

\hyperlinkmovie, \movieref, and \mediabutton are not supported.

3D objects are not supported.

If using a YouTube™ video, use an “embedded” URL with .../embed/... instead of .../v/...

8.9 Tabbing

The tabbing environment works, except that svg math and lateximages do not yet work inside the environment.

 **math in tabbing** If math is used inside tabbing, place tabbing inside a lateximage environment, which will render the entire environment as a single SVG image.

8.10 Tabular

8.10.1 tabular environment

Tabular mostly works as expected, but pay special attention to the following, especially if working with environments, macros inside tabulars, multirows, siunitx S columns, or the packages multirow, longtable, supertabular, or xtab.

Defining macros and environments:

 **Misplaced alignment tab character &**

- When defining environments or macros which include tabular and in-

stances of the & character, it may be necessary to make & active before the environment or macro is defined, then restore & to its default catcode after, using the following commands. These are ignored in print mode.

```
\StartDefiningTabulars
```

```
<define macros or environments using tabular and & here>
```

```
\StopDefiningTabulars
```

This includes before and after defining any macro which used \ttabbox from floatrow.

- When creating a new environment which contains a tabular environment, lwarp's emulation of the tabular does not automatically resume when the containing environment ends, resulting in corrupted HTML rows. To fix this, use \ResumeTabular as follows. This is ignored in print mode.

```
\StartDefiningTabulars % because & is used in a definition
```

```
\newenvironment{outerenvironment}
```

```
{
```

```
\tabular{cc}
```

```
left & right \\
```

```
}
```

```
{
```

```
\TabularMacro\ResumeTabular
```

```
left & right \\
```

```
\endtabular
```

```
}
```

```
\StopDefiningTabulars
```

Cell contents:

macro in a table

- Using a custom macro inside a tabular data cell may result in an extra HTML data cell tag, corrupting the HTML table. To avoid this, use \TabularMacro just before the macro. This is ignored in print mode.

```
\TabularMacro\somemacro & more row contents \\
```

Column specifiers:

@ and !

- Only one each of @ and ! is used at each column, and they are used in that order.

\multirow

- In \multirow cells, the print version may have extra instances of <, >, @, and ! cells on the second and later rows in the \multirow which do not appear in the HTML version.

\newcolumntype

- \newcolumntype is ignored; unknown column types are set to l.

Rules:

vertical rules

- Doubled \hlines, \midrules, and vertical rules are supported.
- Vertical rules next to either side of an @ or ! column are displayed on both sides of the column.

width and trim

- Width options are honored. Trim options are converted to rounded top corners. Trim corners are not rounded with @ or ! columns, and full-width rules ignore trim.

full-width rules

- `\toprule`, `\midrule`, `\bottomrule`, and `\hline` ignore trim. When given an optional width, each cell is styled to create the custom border. Without an optional width, the entire row is given a class to assign the standard border.

combined rules

- If you wish to use `\cmidrule` followed by `\bottomrule`, it may be necessary to use:

```
\cmidrule{2-3} \\[-2ex]
\bottomrule
```

The optional `-2ex` is ignored in HTML, but improves the visual formatting in the print output.

- For `\toprule` and `\bottomrule`, when combined with a `\warpprint` or `\warpHTML` environment, if a “Misplaced `\noalign`” error occurs, change

This & That `\endhead`

to

```
\warpprintonly{This & That \endhead}
```

and likewise with the other `\end` headings. Keep the `\endfirsthead` row unchanged, as it is still relevant to HTML output.

Other:

- `tabularx` ignores the width, but X columns do produce paragraph columns or multicolumns.

longtable headings

- For `longtable`, place headings and footings which do not apply to HTML inside `\warpprintonly{}`.

S columns

- For S columns (from the `siunitx` package), while producing print output, anything non-numeric must be placed inside {} braces, including commands such as `\multirow`. While producing HTML output, though, anything placed inside braces is not seen by lwarp's tabular handling algorithm. To resolve this problem, make a copy of the row, with one version for print output, containing the extra braces, and another version for HTML output, without the extra braces, such as:

```
\warpprintonly{1 & 2 & {\multirow{2}{2cm}{Text}} & 3 \\}
\warpHTMLonly{1 & 2 & \multirow{2}{2cm}{Text} & 3 \\}
```

- In L^AT_EX, a `tabular` may be placed inside a `minipage`, but in HTML a `<table>` may not be inside a ``. If this situation is detected, a warning is printed instructing the user to isolate the `` using `\warpprintonly` or the `\warpprint` environment.

8.10.2 multirow package**vposn**

- Note that recent versions of `multirow` include a new optional `vposn` argument.

multirow cells

- For `multirow`, insert `\mrowcell` into any empty multi-row cells. This will be a null function for the print output, and is a placeholder for parsing the table for HTML output. An error is generated if this is missed.

```
. . . & \multirow{2}{.5in}{text} & . . .
. . . & \mrowcell & . . .
```

colored cells

- The `multirow` documentation regarding colored cells recommends using a negative number of rows. This will not work with `lwarp`, so `\warpprintonly` and `\warpHTMLonly` must be used to make versions for print and HTML.

with `\multicolumn`

⚠ `\multicolumn` & `\multirow`

- See section 341.2 for `\multicolumnrow`.

`lwarp` does not support directly combining `\multicolumn` and `\multirow`. Use `\multicolumnrow` instead. To create a 2 column, 3 row cell:

```
\multicolumnrow{2}{c}[c]{3}[0][1in][0pt]{Text}
```

The two arguments for `\multicolumn` come first, followed by the five arguments for `\multirow`, many of which are optional, followed by the contents.

As per `\multirow`, skipped cells to the right of the `\multicolumnrow` statement are not included in the source code on the same line. On the following lines, `\mcolrowcell` must be used for each cell of each column and each row to be skipped. An error is generated if this is missed.

```
... & \multicolumnrow{2}{c}[c]{3}[0][1in][0pt]{Text} & ...
... & \mcolrowcell & \mcolrowcell & ...
... & \mcolrowcell & \mcolrowcell & ...
```

8.10.3 longtable package

Pkg `longtable` Use one of either `\endhead` or `\endfirsthead` for both print and HTML, and use a `\warpprintonly` macro to disable the other head phrase, and also the `\endfoot` and `\endfirstfoot` phrases. (See section 8.10.4 if using `threeparttablex`.)

```
\begin{longtable}{ [column specifiers] }
[...] \endfirsthead % or \endhead, for print and HTML
\warpprintonly{ % not used in HTML
[...] \endhead % or \endfirsthead
[...] \endfoot
[<lastfoot macros>] \endlastfoot
}
... table contents ...
\warpHTMLonly{
[<lastfoot macros>] % HTML last footer, without \endfoot
% or \endlastfoot.
}
\end{longtable}
```

⚠ `Misplaced \noalign` Use the `\warpprintonly` macro instead of the `warpprint` environment. Doing so helps avoid “Misplaced `\noalign`.” when using `\begin{warpprint}`.

⚠ `\kill` `\kill` is ignored, place a `\kill` line inside

```
\begin{warpprint} ... \end{warpprint}
```

or place it inside `\warpprintonly`.

⚠ `lateximage` `longtable` is not supported inside a `lateximage`.

8.10.4 threeparttablex package

Pkg threeparttablex threeparttablex is used with longtable and booktabs as follows:

```
\begin{longtable}{ [column specifiers] }
[ . . . ] \endfirsthead % or \endhead, for print and HTML
\warpprintonly{ % not used in HTML
[ . . . ] \endhead % or \endfirsthead
[ . . . ] \endfoot
\bottomrule \insertTableNotes \endlastfoot
}
. . . table contents . .
\warpHTMLonly{ % HTML last footer
\bottomrule
\UseMinipageWidths % optional
\insertTableNotes
\endlastfoot
}
\end{longtable}
```

table width The table notes are created using a `\multicolumn`. By default the width is not specified to the browser, so long table notes can cause the table to be spread out horizontally. For HTML output, lwarp guesses the width of the table depending on the number of columns, then restricts its guess to a min/max range. To use this guess for the width of the table notes, use `\UseMinipageWidths` before `\insertTableNotes`. The width is then specified, and in many cases the result is an improvement in overall table layout.

8.10.5 supertabular and xtab packages

Pkg supertabular For `\tablefirsthead`, etc., enclose them as follows:

Pkg xtab

⚠ Misplaced alignment tab character &

```
\StartDefiningTabulars
\tablefirsthead
. .
\StopDefiningTabulars
```

See section 8.10.1.

⚠ lateximage supertabular and xtab are not supported inside a `lateximage`.

8.10.6 colortbl package

Pkg colortbl Only use `\rowcolor` and `\cellcolor` at the start of a row, in that order.

⚠ row/cell color `colortbl` ignores the overhang arguments.

8.10.7 ctable package

⚠ Misplaced alignment tab character & Use `\StartDefiningTabulars` before one or more `\ctables`, and `\StopDefiningTabulars`

after. These change the meaning of the ampersand & character.

8.10.8 bigdelim package

Pkg bigdelim \ldelim and \rdelim use \multirow, so \mrowcell must be used in the proper number of empty cells in the same column below \ldelim or \rdelim, but not in cells which are above or below the delimiter:

```
\begin{tabular}{lll}
<empty> & a & b \\
\ldelim{\{}{\}{3}[left ] & c & d \\
\mrowcell & e & f \\
\mrowcell & g & h \\
<empty> & i & j \\
\end{tabular}
```

<->	a	b
c	d	
e	f	
g	h	
<->	i	j

8.11 Floats

8.11.1 Float contents alignment

⚠ figure & table alignment \centering, etc. are honored in a figure or table if they are the first command inside the float:

```
\begin{table*}
\centering
\caption{A Table}
...
```

8.11.2 float, trivfloat, and/or algorithmicx together

Pkg float If using \newfloat, trivfloat, and/or algorithmicx together, see section 490.1.

Pkg trivfloat

Pkg algorithmicx

⚠ package conflicts

Pkg caption

Pkg subcaption

Package options may cause problems with l warp, especially if they include curly braces.

If selecting options with braces in \usepackage does not work:

`\usepackage[font={it,small}]{caption}% does not work`

... try instead selecting the package options before loading `lwrap`:

```
\PassOptionsToPackage{font={it,small}}{caption}
...
\usepackage{lwrap}
...
\usepackage{caption}
```

... or try setting package options after the package has been loaded:

```
\usepackage{caption}
\captionsetup{font={it,small}}
```

 **numbering** To ensure proper float numbering, set caption positions such as:

```
\captionsetup[figure]{position=bottom}
\captionsetup[subfigure]{position=bottom}
\captionsetup[table]{position=top}
\captionsetup[subtable]{position=top}
```

Similarly for `longtable`. These positions depend on where the user places the `\caption` command inside each float.

8.11.4 subfig package

Pkg subfig

 **lof/lotdepth** At present, the package options for `lofdepth` and `lotdepth` are not working. These counters must be set separately after the package has been loaded.

In the document source, use `\hfill` and `\hspace*` subfig>inline between subfigures to spread them apart horizontally. The use of other forms of whitespace may cause paragraph tags to be generated, resulting in subfigures appearing on the following lines instead of all on a single line.

8.11.5 floatrow package

Pkg floatrow
 **Misplaced alignment** Use `\StartDefiningTabulars` and `\StopDefiningTabulars` before and after defining macros using `\ttabbox` with a tabular inside. See section 8.10.1.

 **tab character & subfig package** When combined with the `subfig` package, while inside a `subfloatrow` `\ffigbox` and `\ttabbox` must have the caption in the first of the two of the mandatory arguments.

 **\FBwidth, \FBheight** The emulation of `floatrow` does not support `\FBwidth` or `\FBheight`. These values are pre-set to `.3\linewidth` and `2in`. Possible solutions include:

- Use fixed lengths. `lwrap` will scale the HTML lengths appropriately.
- Use `warpprint` and `warpHTML` environments to select appropriate values for each case.

- Inside a `warpHTML` environment, manually change `\FBwidth` or `\FBheight` before the `\ffigbox` or `\ttabbox`. Use `\FBwidth` or `\FBheight` normally afterwards; it will be used as expected in print output, and will use your custom-selected value in HTML output. This custom value will be used repeatedly, until it is manually changed to a new value.

8.11.6 keyfloat package

Pkg `keyfloat` If placing a `\keyfig[H]` inside a `keywrap`, use an absolute width for `\keyfig`, instead of `lw`-proportional widths. (The `[H]` option forces the use of a `minipage`, which internally adjusts for a virtual 6-inch wide `minipage`, which then corrupts the `lw` option.)

8.12 KOMA-SCRIPT classes

Cls `komascript` Many features are ignored during the HTML conversion. The goal is source-level compatibility.
`\titlehead`, `\subject`, `\captionformat`, `\figureformat`, and `\tableformat` are not yet emulated.

 Not fully tested! [Please send bug reports!](#)

Some features have not yet been tested. Please contact the author with any bug reports.

8.13 MEMOIR class

 `memoir` While emulating `memoir`, `lwarp` pre-loads a number of packages (section 536.1). This can cause an options clash when the user's document later loads the same packages with options. To fix this problem, specify the options before loading `lwarp`:

```
\documentclass{memoir}
...
\PassOptionsToPackage{options_list}{package_name}
...
\usepackage{lwarp}
...
\usepackage{package_name}
```

 `version numbers` `memoir` emulates a number of packages, and declares a version date for each which often does not match the date of the corresponding freestanding package. This can cause warnings about incorrect version numbers. Since `lwarp` is intended to support the freestanding packages, which are often newer than the date declared by `memoir`, it is hoped that `memoir` will update and change its emulated version numbers to match.

`\verbfootnote` is not supported.

`\newfootnoteseries`, etc. are not supported.

`lwarp` loads `pagenote` to perform `memoir`'s `pagenote` functions, but there are minor differences in `\pagenotesubhead` and related macros.

Poem numbering is not supported.

The `verbatim` environment does not yet support the `memoir` enhancements. It is currently recommended to load and use `fancyvrb` instead.

The `memoir` glossary system is not yet supported by `l warpmk`. The `glossaries` package may be used instead, but does require the glossary entries be changed from the `memoir` syntax to the `glossaries` syntax.

8.14 International languages

⚠ section and file names

If using `pdflatex` with the setting `\booltrue{FileSectionNames}`, non-ASCII text in section names can result in corrupted HTML file names. `pdflatex` may be used if setting `\boolfalse{FileSectionNames}`, in which case HTML file numbers will be generated.

For correct HTML file names, use `xelatex`, `lualatex`, or dedicated document classes / engines.

(As of this writing, this warning is only relevant to the `kotex` package.)

8.15 Miscellaneous packages

8.15.1 verse and memoir

Pkg `verse` When using `verse` or `memoir`, always place a `\\"` after each line.

Cls `memoir` `\attrib` The documentation for the `verse` and `memoir` packages suggest defining an `\attrib` command, which may already exist in current documents, but it will only work for print output. `l warp` provides `\attribution`, which works for both print and HTML output. To combine the two so that `\attrib` is used for print and `\attribution` is used for HTML:

```
\begin{warpHTML}
\let\attrib\attribution
\end{warpHTML}
```

Len `\vleftskip` Len `\vleftmargini` Len `\HTMLvleftskip` Len `\HTMLleftmargini` These lengths are used by `verse` and `memoir` to control the left margin, and they may already be set by the user for print output. New lengths `\HTMLvleftskip` and `\HTMLleftmargini` are provided to control the margins in HTML output. These new lengths may be set by the user before any `verse` environment, and persist until they are manually changed again. One reason to change `\HTMLleftmargini` is if there is a wide `\flagverse` in use, such as the word “Chorus”, in which case the value of `\HTMLleftmargini` should be set to a wide enough length to contain “Chorus”. The default is wide enough for a stanza number.

⚠ spacing

Horizontal spacing relies on `pdftotext`'s ability to discern the layout (-layout option) of the text in the HTML-tagged PDF output. For some settings of `\HTMLleftmargini` or `\HTMLleftskip` the horizontal alignment may not work out exactly, in which case a label may be shifted by one space.

8.15.2 newclude package

Pkg newclude newclude modifies \label in a non-adaptive way, so newclude must be loaded before l warp is loaded:

```
\documentclass{article}
. . . <font setup>
\usepackage{newclude}
\usepackage[warpHTML]{l warp}
. . .
```

8.15.3 babel package

Pkg babel When French is used, the caption separator is changed to a dash. The following may be used to restore it to a colon:

```
\renewcommand*\CaptionSeparator}{:~}
```

punctuation spaces Also when French is used, l warp creates fixed-width space around punctuation by patching \FBcolonspace, \FBthinspace, \FBguillspace, \FBmedkern, \FBthickkern, \FBtextellipsis, and the tilde. If the user's document also changes these parameters, the user's changes should be placed inside a warpprint environment so that the user's changes do not affect the HTML output.

⚠ customized spacing

8.15.4 polyglossia package

Pkg polyglossia l warp uses cleveref, which has some limitations when using polyglossia, possibly resulting in the error

```
! Undefined control sequence. . . . \begindocumenthook
```

To test compatibility, add

```
\usepackage{cleveref}
```

near the end of the preamble (as the last package to be loaded), and try to compile the print version. It may be necessary to set

```
\setdefaultlanguage{english}
```

or some other language supported by cleveref, then select other languages using \setotherlanguages.

Once the print version works with cleveref and polyglossia, the HTML version should work as well using l warp.

8.15.5 todonotes and luatodonotes packages

Pkg todonotes The documentation for todonotes and luatodonotes have an example with a todo

Pkg luatodonotes

inside a caption. If this example does not work it will be necessary to move the todo outside of the caption.

8.15.6 `fixme`

Pkg `fixme` External layouts (`\fxloadlayouts`) are not supported.

⚠ **external layouts**

User control is provided for setting the HTML styling of the “faces”. The defaults are as follows, and may be changed in the preamble after `fixme` is loaded:

```
\def\FXFaceInlineHTMLStyle{font-weight:bold}
\def\FXFaceEnvHTMLStyle{font-weight:bold}
\def\FXFaceSignatureHTMLStyle{font-style:italic}
\def\FXFaceTargetHTMLStyle{font-style:italic}
```

8.15.7 `chemfig` package

If using `\polymerdelim` to add delimiters to a `\chemfig`, wrap both inside a single `\teximage`:

```
\begin{teximage}[-chemfig-~\PackageDiagramAltText]
\chemfig{...}
\polymerdelim[...]{...}
\end{teximage}
```

8.15.8 `chemformula` package

⚠ **chemformula with MATHJAX**

`chemformula` works best without MATHJAX. If MATHJAX is used, `\displaymathother` must be used before `array`, and then `\displaymathnormal` may be used after. (The `chemformula` package adapts to `array`, but does not know about MATHJAX, and MATHJAX does not know about `chemformula`.)

While using MATHJAX, `\displaymathother` may also be used for other forms of display and inline math which contain `chemformula` expressions.

8.15.9 `mhchem` package

See section 327.

8.15.10 `xparse` package

Pkg `xparse` To remove from the log any warnings about redeclaring objects, place the following before `l warp` is loaded:

```
\usepackage[log-declarations=false]{xparse}
```

8.15.11 kotex package

Pkg kotex See section 8.14 regarding *pdflatex* and Korean section names.

⚠ Korean section names

9 Compiling using custom shell commands

lwarf and *lwarpmk* try to make it easy to process print and HTML compilation tasks in most situations. Depending on the operating system, command-line options, *TEX* engine, and *lwarf* options, the commands `lwarpmk print` and `lwarpmk html` are automatically set up to correctly recompile the project. These actions may be overridden using *lwarf* options, thus allowing the use of packages such as *perltx* and *pythontex*.

9.1 Command options

Opt `PrintLatexCmd` The *lwarf* options `PrintLatexCmd` and `HTMLLatexCmd` are used to set customized commands to be executed by `lwarpmk print` and `lwarpmk html`.

`PrintLatexCmd` should be set to shell commands which take `project.tex` and generate `project.pdf`.

`HTMLLatexCmd` should be set to take `project_html.tex` and generate `project_html.pdf`. *lwarpmk* will then take `project_html.pdf` and automatically convert it and generate `project.html`.

9.2 Literal character macros

The *lwarf* package options are parsed by *TEX*, and so some characters require the use of a special macro to represent them. See table 7. `\LWRopquote` and `\LWRopseq` may be used to increase operating-system portability. `\jobname` must have `_html` appended for processing HTML. `\space` may be necessary between other macros.

 **macro not found** To use these macros, either *kvoptions-patch* must be loaded before *lwarf*:

```
\usepackage{kvoptions-patch}
\usepackage[
    PrintLatexCmd={ ... } ,
    HTMLLatexCmd={ ... }
]{lwarf}
```

Table 7: Literal character macros

Character	Macro	Comment
%	\LWRpercent	
\$	\LWRdollar	
&	\LWRamp	
%	\LWRhash	
\	\LWRbackslash	
' or "	\LWRopquote	Depends on the operating system.
& or &&	\LWRopseq	Depends on the operating system.
(space)	\space	Forces an extra space.
(jobname)	\jobname	Without file extension.

or \lwarpsetup must be used to set PrintLatexCmd and HTMLLatexCmd:

```
\usepackage[...]{lwarp}
\lwarpsetup{
  PrintLatexCmd=
  {
    latex tm \LWRopseq
    dvips -o tm-pics.ps tm.dvi \LWRopseq
    ps2pdf tm-pics.ps \LWRopseq
    pdflatex tm.tex
  },
  HTMLLatexCmd=
  {
    latex tm_html \LWRopseq
    dvips -o tm_html-pics.ps tm_html.dvi \LWRopseq
    ps2pdf tm_html-pics.ps \LWRopseq
    pdflatex tm_html.tex
  }
}
```

9.3 *latexmk*

Prog latexmk If *latexmk* is used for a project, it may be easiest to continue using it.

latexmk project.tex would create *project.pdf* as normal.

latexmk project_html.tex would create *project_html.pdf*, then

lwarpmk pdftohtml project_html.pdf would take *project_html.pdf* and convert it to *project.html*.

Pkg sagetex *latexmk* may simplify the use of packages such as **sagetex**.

9.4 perltex package

Pkg perltx The **l warp** package option settings to use **perltx** would be similar to:

```
\usepackage[
  ...
  PrintLatexCmd={perltx -latex=pdflatex project.tex} ,
  HTMLLatexCmd={perltx -latex=pdflatex project_html.tex} ,
  ...
]{l warp}
```

⚠ “impure” math Place **perltx** math expressions between `\displaymathother` and `\displaymathnormal`, or `\inlinemathother` and `\inlinemathnormal`. See section [8.7.9](#).

9.5 pythontex package

Pkg pythontex An example using **pythontex**:

```
\usepackage[
  ...
  PrintLatexCmd={
    pdflatex project.tex \LWRopseq
    pythontex project \LWRopseq
    pdflatex project.tex
  } ,
  HTMLLatexCmd={
    pdflatex project_html.tex \LWRopseq
    pythontex project_html \LWRopseq
    pdflatex project_html.tex
  } ,
  ...
]{l warp}
```

Another possibility is to use *latexmk*, placing the `\ latexmk ...` commands in the `PrintLatexCmd` and `HTMLLatexCmd` options. While using these options, the **l warp** option `latexmk` would not be used.

⚠ “impure” math No attempt has yet been made to make **pythontex** robust with HTML output. Some math objects must be surrounded by `\displaymathother ... \displaymathnormal`, or `\inlinemathother ... \inlinemathnormal`. Displays of code may have to be enclosed inside a `\ lateximage` environment to prevent <, > and similar from being interpreted by the browser as HTML entities.

9.6 Other packages

Pkg sympytex Other packages such as **sympytex** and **rinterface** would be set up similar to **pythontex**, and the same warnings would apply.

Pkg rinterface

9.7 *make* program

Prog make To use `lwarp` with the *make* program, have the `makefile` take `project.tex` and generate the print version `project.pdf`, as normal. `\usepackage{lwarp}` must be used, and it generates `lwarpmk.conf` when the print version is created.

To generate HTML, first have `project_html.tex` be compiled to generate `project_html.pdf`. This must be in PDF format. Finally, have `project_html.pdf` be converted to HTML using `lwarpmk pdftohtml project_html.pdf`, and convert SVG math with `lwarpmk limages`.

9.8 UTF-8 locale

 **UTF-8 locale** `lwarpmk` uses the `texlua` program, which sets the “locale” to “C”, including for external operating-system calls such as when executing `lwarpmk html`. In some cases, an external program called from the user’s document may require the use of a UTF-8 “locale”. For UNIX-related operating systems, it may be required to use `lwarp`’s custom compilation options to add a locale change:

```
\usepackage{lwarp}[
    PrintLatexCmd={
        env LC_CTYPE=en_US.UTF-8
        xelatex -shell-escape project.tex
    }
    HTMLLatexCmd={
        env LC_CTYPE=en_US.UTF-8
        xelatex -shell-escape project_html.tex
    }
]
```

Pkg ditaa The only example seen so far where this is required is the `ditaa` package, where the locale change allows the use of UTF-8 with Xe^LA_TE_X and `ditaa`. To use Lu^aL^AT_EX instead, the locale change would have to be made inside the `ditaa` package where its calls the `ditaa` program.

10 EPUB conversion

lwarf does not produce EPUB documents, but it may be told to modify its HTML output to greatly assist in the conversion. An external program may then be used to finish the conversion to EPUB.

<meta> author To assign the author's name for regular lwarf HTML files, and also for the EPUB, use \HTMLAuthor {\{name\}}. This assigns the name to the <meta> author element. It may be set empty, and it defaults to \theauthor.

A special boolean is provided to simplify the process of converting lwarf HTML output to EPUB:

FormatEPUB

Bool FormatEPUB
Default: false

FormatEPUB changes HTML output for easy EPUB conversion via an external program. Removes per-file headers, footers, and nav. Adds footnotes per chapter/section.

To help convert lwarf HTML output to EPUB, add

```
\booltrue{FormatEPUB}
```

to the project's source preamble after \usepackage{lwarf}. The EPUB version of the document cannot co-exist with the regular HTML version, so

```
Enter ⇒ lwarpmk cleanall
```

```
Enter ⇒ lwarpmk html
```

```
Enter ⇒ lwarpmk limages
```

to recompile with the FormatEPUB boolean turned on. Several changes are then made to the HTML output:

- Headers, footers, and navigation are removed at file splits.
- Any accumulated footnotes are printed at the bottom of each section.

The resulting files will be ready to be loaded into an EPUB conversion program, such as the open-source program *Calibre* (<https://calibre-ebook.com/>).

⚠ search order

The EPUB conversion program must know what order the files are included. For lwarf projects, set the EPUB conversion software to do a breadth-first search of the files. For *Calibre*, this option is found in

Preferences → Plugins → File type plugins → HTML to Zip

⚠ encoding

Check the box Add linked files in breadth first order. Set the document encoding as utf-8, which is what lwarf generates for HTML, even if the original printed document uses some other encoding.

⚠ section breaks

The EPUB-conversion program must also know where the section breaks are located. For a list of lwarf's section headings, see table 9. For example, an article class document would break at \section, which is mapped to HTML heading level <h4>, whereas a book class document would break at \chapter, which is HTML heading level <h3>. For *Calibre*, this option is found in

Preferences → Conversion (Common Options) → Structure Detection → Detect chapters at (XPath expression)

Select the “magic wand” to the right of this entry box, and set the first entry

Match HTML tags with tag name:

to “h4”. (Or “h3” for document classes with \chapters.) The Detect chapters at field should then show

//h:h4 — or — //h:h3

This option is also available on the main tool bar at the Convert books button.

Once these settings have been made, the lwarf-generated HTML files may be loaded by *Calibre*, and then converted to an EPUB.

MATHJAX support

MATHJAX may be used in EPUB documents. Some e-readers include MATHJAX, but any given reader may or may not have a recent version, and may or may not include extensions such as support for siunitx.

lwarf adds some modifications to MathML to support equations numbered by chapter. These modifications may not be compatible with the e-reader's version of MATHJAX, so lwarf requests that a known version be loaded instead. In some cases chapter numbering of equations still doesn't work.

Until math support in EPUB documents is improved, it is recommended to use SVG images instead of MATHJAX, especially for equations numbered by chapter, or where siunitx support is important.

11 Word-processor conversion

lwarf may be told to modify its HTML output to make it easier to import the HTML document into a word processor. At the time of this writing, it seems that LibreOffice works best at preserving table layout, but it still has some limitations, such as an inability to automatically assign figure and table frames and captions according to user-selected HTML classes. lwarf provides some assistance in locating these frame boundaries, as shown below.

11.1 Activating word-processor conversion

A special boolean is provided to simplify the process of converting lwarf HTML output to EPUB:

FormatWP

Bool FormatWP
Default: false

Changes HTML output for easier conversion by a word processor. Removes headers and nav, prints footnotes per section, and also forces single-file output and turns off HTML debug comments. Additionally, honors the booleans WPMarkFloats, WPMarkMinipages, WPMarkTOC, and WPMarkLOFT.

To help modify lwarf HTML output for easier import to a word processor, add

\booltrue{FormatWP}

to the project's source preamble after lwarf is loaded. The following changes are then made to the HTML output:

- If using a class without chapters, \section and lower are shifted up in level for the HTML heading tags. The css has not been changed, so the section heading formats will not match the normal HTML output, but when imported to *LibreOffice Writer* the higher section headings will import as **Heading 1** for the title, **Heading 2** for \section, etc.
- Headers, footers, and navigation are removed at file splits.
- Any accumulated footnotes are printed at the bottom of each section.
- Forces single-file output.
- Turns off HTML debugging comments. These are comments appearing inside the HTML code, marking the opening/closing of sections and <div>s, but they are no longer useful when the document has been imported into a word processor.
- An additional <div> with an id encapsulates each float and minipage, which on import into *LibreOffice Writer* causes a thin frame to appear around the text block for each.
- Float captions are given an explicit italic formatting.

- Tabular rule borders are made explicit for *LibreOffice Writer*. LIBREOFFICE displays a light border around each cell while editing, even those which have no border when printed, and lwarp also uses a light border for thin rules, so it will be best to judge the results using the print preview instead of while editing in LIBREOFFICE.
 - \includegraphics and svg math width and height are made explicit for LIBREOFFICE.
 - \hspace is approximated by a number of \quads, and rules are approximated by a number of underscores.
 - Explicit HTML styles are given to:
 - \textsc, etc.
 - \underline, soul and ulem markup.
 - center, flushleft, flushright.
 - \marginpar, keyfloat, sidenotes, floatflt, and wrapfig.
 - fancybox \shadowbox, etc.
 - The LATEX and TEX logos.
 - Honors several booleans:
 - WPMarkFloats:** Marks the begin and end of floats.
 - WPMarkMinipages:** Marks the begin and end of minipages.
 - WPMarkTOC:** Marks the location of the Table of Contents.
 - WPMarkLOFT:** Marks the locations of the List of Figures/Tables.
 - WPMarkMath:** Prints LATEX math instead of using images.
 - WPTitleHeading:** Adjusts title and section headings.
- Several of these may be used to add markers to the HTML text which help determine where to adjust the word processor document after import.

11.2 Additional modifications

WPMarkFloats

Bool WPMarkFloats
Default: false

Adds
===== begin table =====
...
===== end =====

or

===== begin figure =====
...
===== end =====

around floats while formatting for word processors. This helps identify boundaries of floats to be manually converted to word-processor frames and captions.

WPMarkMinipages

Bool WPMarkMinipages

Default: false

Adds

```
==== begin minipage ====  
 . . .  
==== end minipage ===
```

around minipages while formatting for word processors. This helps identify boundaries of minipages to be manually converted to word-processor frames.

WPMarkTOC

Bool WPMarkTOC

Default: true

While formatting for word processors, adds

```
==== table of contents ===
```

where the Table of Contents would have been. This helps identify where to insert the actual TOC.

If set false, the actual TOC is printed instead.

WPMarkLOFT

Bool WPMarkLOFT

Default: false

While formatting for word processors, adds

```
==== list of figures ==== and/or  
==== list of tables ====
```

where each of these lists would have been. This helps identify where to insert the actual lists.

If set false, the actual lists are printed instead.

WPMarkMath

siunitx

Bool WPMarkMath

Default: false

Prog TeXMaths

While formatting for word processors, prints math as LATEX code instead of creating SVG images or MATHJAX. This is useful for cut/paste into the *LibreOffice Writer TeXMaths* extension.

When using the siunitx package, enter

```
\usepackage{siunitx}
```

in the *TeXMaths* preamble. Equation numbering is problematic for *AMS* math environments.

Table 8: Section HTML headings for word-processor conversion

Section	HTML headings*			
	With \chapter		Without \chapter	
	WPTitleHeading	WPTitleHeading	true	false
Title	<h1>	plain	<h1>	plain
\book	<div>	<div>	<div>	<div>
\part	<h2>	<h1>	<h2>	<h1>
\chapter	<h3>	<h2>	—	—
\section	<h4>	<h3>	<h3>	<h2>
\subsection	<h5>	<h4>	<h4>	<h3>
\paragraph	<h6>	<h5>	<h5>	<h4>
\ subparagraph		<h6>	<h6>	<h5>

* For default depths when not FormatWP, see table 9 on page 191.

WPTitleHeading

Bool WPTitleHeading
 Default: false
 section headings

While formatting for word processors, true sets the document title to <h1>, which is expected for HTML documents, but also causes the lower-level section headings to start at **Heading 2** when imported into LIBREOFFICE. Set to false to cause the title to be plain text, and the section headings to begin at **Heading 1**.

See table 8 on page 175.

11.3 Recommendations

TOC, LOF, LOT For use with *LibreOffice Writer*, it is recommended to:

1. Set \booltrue{FormatWP}
2. Set \booltrue{WPMarkTOC} and \boolfalse{WPMarkLOFT}
3. Use lwarp to generate the HTML document.
4. Copy/paste from the HTML document into an empty *LibreOffice Writer* document.
5. Manually insert a LIBREOFFICE TOC in the LIBREOFFICE document.
6. Manually add frames around each float, adding a caption which is cut/pasted from each float's simulated caption.
7. Manually create cross references.

This process yields a document with an actual LIBREOFFICE Table of Contents, but a simulated List of Figures and List of Tables.

siunitx For **siunitx**, remember to adjust the preamble as mentioned above.

LO view border options LIBREOFFICE has options in the **View** menu to turn on/off the display of thin borders around table cells and text objects.

11.4 Limitations

Floats and captions are not explicitly converted to LIBREOFFICE floats with their own captions. Floats are surrounded by a thin frame in the LIBREOFFICE editor, and may be marked with `WPMarkFloats`, but are not given a proper LIBREOFFICE object frame. Captions are given an explicit italic formatting, but not a proper LIBREOFFICE paragraph style.

Cross references are not actual LIBREOFFICE linked cross references.

The List of Figures and List of Tables are not linked. The pasted pseudo `LOF` and `LOT` match the numbering of the L^AT_EX and HTML versions.

Equation numbering is not automatic, but the equation numbers in SVG math will match the L^AT_EX and HTML output. SVG math is recommended when using the `AMS` environments, which may have multiple numbered equations per object.

As of when last checked, LIBREOFFICE ignores the following:

- Minipage alignment.
- Tabular cell vertical alignment.
- Image rotation and scaling.
- Rounded border corners, which are also used by:
 - `\textcircled`
 - `booktabs trim`
- `\hspace` and `rules`, also used by `algorithmic`.
- Coloring of text decorations, used by `soul` and `ulem`.
- Overline text decoration, used by `romanbar`.

LIBREOFOFFICE also has limitations with frames and backgrounds:

- Multiple lines in an object are framed individually instead of as a whole.
- Nested frames are not handled correctly.
- Images inside boxes are not framed correctly.
- Spans with background colors and frames are not displayed correctly.

12 Modifying lwarp

locating something	To quickly find the source for a package in <code>lwarp.dtx</code> , search for <code>*packagename</code> , such as <code>*siunitx</code> . Likewise, to quickly find the source for a file in <code>lwarp.dtx</code> , search for <code>*filename</code> , such as <code>*lwarp.css</code> . Purely text-based packages probably will work as-is when generating HTML. Look to existing code for ideas on how to expand into new code.
image of TeX output	An environment may be converted to a <code>\teximage</code> then displayed with an image of the resulting L ^A T _E X output. See section 88 for an example of the <code>picture</code> environment.
css classes	To create a custom HTML block or inline css class, see section 51.9.
print/HTML macros	To create print and HTML versions of the same macro or environment, see section 36.
 TEX boxes	Any TeX boxes must be undone, as SVG math or <code>\teximages</code> require <code>\newpage</code> , which will not work in a TeX box.
index recreation	To recreate the index for the <code>lwarp</code> documentation:

```
makeindex -s gglo.ist -o lwarp.gls lwarp.glo
splitindex lwarp.idx -- -s gind.ist
```

12.1 Creating a development system

The following creates a local development system for `lwarp` on a TeXLive system in a UNIX-like environment. Doing so allows anything requesting `lwarp` to use the development version instead of whichever version is installed in TeXLive.

Create a development directory:

Place into this directory `lwarp.dtx` and `lwarp.ins`.

To create `lwarp.sty`, execute

Enter ⇒ **`pdflatex lwarp.ins`**

which creates `lwarp.sty` and several hundred additional `lwarp-*.sty` files for the various packages which are supported.

To create the documentation `lwarp.pdf`, execute

Enter ⇒ **`pdflatex lwarp.dtx`**

To make the development files visible to other projects:

Create the directory

`/usr/local/texlive/texmf-local/tex/latex/local/lwarp`

Inside this directory, create the file `update`, containing:

```
ln -s /path_to_dev_directory/lwarp*.sty .
ln -s /path_to_dev_directory/lwarp_baseline_marker.png .
ln -s /path_to_dev_directory/lwarp_baseline_marker.eps .
mktexlsr
```

Run ./update now, and whenever a new lwarp-* package is added.

To make the development version of *lwarpmk* visible to other projects:

```
cd /opt
ln -s /usr/local/texlive/texmf-local/bin/x86_64-linux texbin_local
cd texbin_local
ln -s ../../scripts/lwarp/lwarpmk.lua lwarpmk
cd /usr/local/texlive/texmf-local/scripts/
mkdir lwarp
cd lwarp
ln -s /path_to_dev_directory/lwarpmk.lua lwarpmk
```

Verify that the correct version is found with

Enter ⇒ **which lwarpmk**

To make the local versions visible to the shell:

Paths must be set by the shell startup, such as in .bashrc and .cshrc:

In .bashrc:

```
PATH=/opt/texbin_local:/opt/texbin:$PATH
```

In .cshrc:

```
setenv PATH ${HOME}/bin:/opt/texbin_local:/opt/texbin:${PATH}
```

12.2 Modifying a package for lwarp

If a class loads additional packages, it will be required to modify the class for lwarp, since lwarp must be loaded before most other packages.

To work with lwarp, a class must first set up anything which replicates the functions of the basic L^AT_EX classes, load any required fonts, then load lwarp, then finally load and adjust any other required packages.

When creating HTML, lwarp redefines the \usepackage and \RequirePackage macros such that it first looks to see if a lwarp-<packagename>.sty version exists. If so, the lwarp version is used instead. This modular system allows users to create their own versions of packages for lwarp to use for HTML, simply by creating a new package with a lwarp- prefix. If placed in the local directory along with the source code, it will be seen by that project alone. If placed alongside the other lwarp- packages where TEX

can see it, then the user's new package will be seen by any documents using lwarf. (Remember `mktexlsr` or `texhash`.)

An `lwarf-<packagename>.sty` package is only used during HTML generation. Its purpose is to pretend to be the original package, while modify anything necessary to create a successful HTML conversion. For many packages it is sufficient to simply provide nullified macros, lengths, counters, etc. for anything which the original package does, while passing the raw text on to be typeset. See the pre-existing `lwarf-` packages for examples.

Anything the user might expect of the original package must be replaced or emulated by the new `lwarf-` package, including package options, user-adjustable counters, lengths, and booleans, and conditional behaviors. In many of these packages, most of the new definitions have a "local" prefix according to the package name, and @ characters inside the name, which hides these names from the user. In most cases these macros will not need to be emulated for HTML output. Only the "user-facing" macros need to be nullified or emulated.

Each `lwarf-*` package should first call either of:

```
\LWR@ProvidesPackageDrop  
-or-  
\LWR@ProvidesPackagePass
```

If "Drop"ped, the original print-version package is ignored, and only the `lwarf-` version is used. Use this where the original print version is useless for HTML. If "Pass"ed, the original package is loaded first, with the user-supplied options, then the `lwarf-` version continues loading as well. See section 360 (ntheorem) for an example of selectively disabling user options for a package. Use this when HTML output only requires some modifications of the original package. For a case where the original package is usable without changes, there is no need to create a `lwarf-` version.

12.2.1 Adding a package to the `lwarf.dtx` file

When adding a package to `lwarf.dtx` for permanent including in `lwarf`, provide the `lwarf-<packagename>` code in `lwarf.dtx`, add its entry into `lwarf.ins`, and also remember to add

```
\LWR@loadafter{<packagename>}
```

to `lwarf.dtx` in section 20.1. This causes `lwarf` to stop with an error if `packagename` is loaded before `lwarf`. Finally, add an entry in table 2, Supported packages and features, and also the Updates section.

12.3 Modifying a class for lwarf

If a class loads additional packages, it will be required to modify the class for `lwarf`, since `lwarf` must be loaded before most other packages.

To work with **lwarp**, a class must first set up anything which replicates the functions of the basic L^AT_EX classes, load any required fonts, then load **lwarp**, then finally load and adjust any other required packages.

12.4 Testing **lwarp**

When changes have been made, test the print output before testing the HTML. The print output compiles faster, and any errors in the printed version will be easier to figure out than the HTML version.

Remember that the configuration files are only rewritten when compiling the printed version of the document.

When changing the source to *lwarpmk* or a css file in *lwarp.dtx*:

1. Change the source in *lwarp.dtx*.
2. pdflatex *lwarp.ins*
3. pdflatex *lwarp.dtx*
4. If modifying *lwarpmk* the new version should now be active.
5. If modifying css files:
 - (a) For the document, *lwarpmk* print to update the css files in the project.
 - (b) Reload the HTML document to see the effect of the new css files.

Sometimes it is worth checking the <project>_html.pdf file, which is the PDF containing HTML tags. Also, <project>_html.html has the text conversion of these tags, before the file is split into individual HTML files.

It is also worth checking the browser's tools for verifying the correctness of HTML and css code.

12.5 Modifying *lwarpmk*

Prog *lwarpmk*
File *lwarpmk.lua* In most installations, *lwarpmk.lua* is an executable file located somewhere the operating system knows about, and it is called by typing **lwarpmk** into a terminal.

A project-local copy of *lwarpmk.lua* may be generated, modified, and then used to compile documents:

1. Add the *lwarpmk* option to the *lwarp* package.
2. Recompile the printed version of the document. The *lwarpmk* option causes *lwarp* to create a local copy of *lwarpmk.lua*
3. The *lwarpmk* option may now be removed from the *lwarp* package.
4. Copy and rename *lwarpmk.lua* to a new file such as *mymake.lua*.

5. Modify `mymake.lua` as desired.
6. If necessary, make `mymake.lua` executable.
7. Use `mymake.lua` instead of `lwarpmk.lua`.

13 Troubleshooting

13.1 lwarp package error conditions and warnings

lwarp tests for a number of error conditions and prints appropriate warnings. The following is a summary of these conditions.

13.1.1 Configuration file `lwarpmk.conf`

File does not exist: The configuration file must exist for `lwarpmk`.

Incorrect Unix /Windows selection: The operating system which was detected by `lwarp`. So far only Unix and Windows are supported.

Incorrect delimiter characters. Older versions of `lwarpmk` used a different delimiter.

Source name is set to `lwarp`: `lwarp` has recently been recompiled in this directory, which overwrote the project's configuration files. This also occurs if `lwarpmk` is executed in `lwarp`'s source directory.

Incorrect operating system: The configuration file was set for a different operating system, perhaps due to sharing in a collaborative project.

Outdated configuration files: `lwarp` has been updated since this project was last compiled. If there appears to be a valid print command in the file, `lwarpmk` displays this to instruct the user how to recompile the print version, which then updates the configuration files.

The designated source file does not exist: For whatever reason...

Unknown engine: `lwarp` cannot determine which engine is being used. Supported are DVI L^AT_EX, PDF L^AT_EX, X_EL^AT_EX, LuaL^AT_EX, and upL^AT_EX.

13.1.2 Image generation with `lwarpmk limages`

"Wait a moment for the images to complete before reloading page.":

Images are generated by background tasks. If the document is reloaded before these tasks are complete, some images may not yet be generated. `lwarpmk` tries to wait for background tasks to complete before exiting.

HTML version does not exist: Images are extracted from the HTML version, which must be compiled before images are generated.

***-images.txt does not exist:** This file tells which images to extract from the HTML file. If the file does not exist, it may be that no SVG math or lateximages were used. If so, `lwarpmk limages` is not necessary.

Cross references are not correct: The document must have up-to-date cross references to locate the images to extract. A number of conditions may cause incorrect cross references.

“WARNING: Images will be incorrect.”: An image reference was not found. Recompile.

lwarpmk epstopdf * or **lwarpmk pdftosvg ***: Errors if filenames are not found.

13.1.3 Default bitmapped font

lwarf requires the use of a vector font. If lwarf detects that the document uses the default COMPUTER MODERN font, and the cm-super package is not installed, it is assumed that the font is bitmapped. An error is generated, along with the recommendation to install cm-super or use lmodern.

13.1.4 Packages

Loaded before lwarf: Some packages and classes must be loaded before lwarf. These include input and font encoding, morewrites and newclude, and a number of CJK-related packages and classes.

Loaded after lwarf: Most packages which are modified by lwarf must be loaded after lwarf.

Loaded never: Some packages do not work with lwarf. An error is generated, along with a list of alternatives to consider.

Specific packages: Some packages enforce a specific load order vs. certain other packages.

Patching error: lwarf tries to patch some packages using xpatch. If the original package has been updated more recently than lwarf, a patch may not work. It may be necessary to use an older version of the package until lwarf is updated.

longtable: lwarf’s longtable package issues detailed error messages regarding the use of the table headers and footers.

13.1.5 Compiling

SideTOCDepth < FileDepth: A warning is displayed if these counters are set such that the sidetoc will not be able to access all pages of the website.

Duplicate filenames: lwarf may generate file names from section names. While doing so, the filenames are simplified and special characters are removed. If this process generates a duplicate filename, an error is generated, describing the filename and which section name generated it.

 **HTML corrupted** **Multirow:** When \multirow or \multicolumn are used, \mrowcell or \mcolrowcell must be placed in the appropriate cells to avoid corrupted HTML output.

(width,height) missing a comma: \makebox and \framebox can accept a parenthesis-delimited width and height, which must be separated by a comma.

“Load graphicx or graphics for improved SVG math baselines.”: SVG math baselines are improved if either of these packages are used.

“Load graphicx or graphics for improved XeTeX logo.”: If these packages are loaded, the X_ETEX logo can use the reversed “E”.

“It is recommended to use [width=xx\linewidth] instead of [scale=yy] ”: Browser support of scale does not have the same effect as in L_ETEX.

13.2 Using the lwarp package

The following address problems which may occur, and possible solutions to each.

Also see:

Section 7.10: Commands to be placed into the warpprint environment

Section 8: Special cases and limitations

Text is not converting correctly / corrupted HTML tags:

- Font-related UTF-8 information must be embedded in the PDF file. See section 7.4 regarding bitmapped vs. vector fonts.
- See section 8.2.1 regarding HTML entities and the characters &, <, and >.

Undefined HTML settings:

- See the warning regarding the placement of the HTML settings at section 7.6.

Tabular problems: See section 8.10.1.

Obscure error messages:

Print first: Be sure that a print version of the document compiles and that your document’s L_ETEX code is correct, before attempting to generate an HTML version.

\end{warpHTML}, \end{warpprint}, \end{warpall}: Each of these must be without any other characters on the same line.

Options clash: If using memoir, see section 8.13.

“Missing \begin{document}.”: Some packages require that their options be specified before lwarp is loaded, or via the package’s setup macro, especially if these options include the use of braces. See section 8.1.

“No room for a new \write.”: Before \usepackage{lwarp}, add:

```
\usepackage{morewrites}
\morewritessetup{allocate=10}
```

“Missing \$ inserted.”: If using a filename or URL in a footnote or \item, escape underscores with _.

“Label(s) may have changed. Rerun to get cross-references right.”:

This warning may repeat endlessly if a math expression is used in a caption. Simple math expressions such as \$X=1\$ may be replaced with

```
\textit{X}\,=\,\textit{1}
```

“Leaders not followed by proper glue”: This can be caused by a missing \f@floattype or \s@ectiontype definition. See lwarp’s definitions for examples.

“Improper \prevdepth”: lateximages and svg math require \newpage, which cannot work inside TeX boxes or \ensuremath. Anything using \newsavebox, \newbox, \lrbox, \savebox, \hbox, \vbox, \usebox, \sbox, etc., must be modified to work without box commands.

If you find something using \ensuremath, have it temporarily set:

```
\LetLtxMacro{\@ensuredmath}{\LWR@origensuredmath}
```

inside a group first.

Also, custom macros which appear inside a section, figure, or table name should be made robust since they appear inside the .toc, .lof, or .lot files. Use \newrobustcmd or \robustify from etoolbox, xparse, etc.

If using BibTeX, see section 8.6.9.

“! Undefined control sequence. . . . \@begindocumenthook”: See section 8.15.4 if using polyglossia.

“\begin{equation} ended by \end{document}”: Do not use custom macros such as \beq and \eeq to replace

```
\begin{equation}
  ...
\end{equation}
```

“Misplaced \omit”: If using \LWR@formatted to define new macros for print and HTML modes, see section 36 regarding \LWR@expandableformatted.

Complicated objects inside math: Some objects, such as Tikz, may not compile in lwarf’s normal math emulation. Insert

```
\displaymathother -or- \inlinemathother  
before the math, and then
```

```
\displaymathnormal -or- \inlinemathnormal  
when displaying “normal” math. See section 8.7.9.
```

Slow compilation of math objects: Complicated math objects can also cause problems with alt tags, resulting in very slow compilation, large alt tags, and possible crashes. Use \inlinemathother ... \inlinemathnormal or \displaymathother ... \displaymathnormal around the math expression.

! MATHJAX **Incorrect MATHJAX:** Some objects do not convert to MATHJAX. Use \displaymathother before these objects, then \displaymathnormal to return to “normal” display math. See section 8.7.9.

Missing sections: See section 7.6 regarding the FileDepth and SideTOCDepth counters, and the use of \tableofcontents in the home page.

Misnumbered footnotes from section headings: See section 8.5.4.

Missing HTML files:

- See the warning regarding changes to the HTML settings at section 7.6.
- Ensure that the filenames are unique after math and short words are removed. See FileSectionNames at section 7.6.

Missing / incorrect cross-references:

- Use `lwarpmk` again followed by `lwarpmk html` or `lwarpmk print` to compile the document one more time.

labels**⚠️ label characters**

\nameref

⚠️ empty link**⚠️ cleveref page numbers**

- Labels with special characters may be a problem. It is best to stick with alpha-numeric, hyphen, underscore, and perhaps the colon (if not French). `\nameref` refers to the most recently-used section where the `\label` was defined. If no section has been defined before the `\label`, the link will be empty. Index entries also use `\nameref` and have the same limitation.
- `cleveref` and `varioreref` are supported, but printed page numbers do not map to HTML, so a section name or a text phrase are used for `\cpageref` and `\cpagerefrange`. This phrase includes `\cpagerefFor`, which defaults to "for".

Ex:

`\cpageref{tab:first,tab:second}`in `html` becomes:“pages **for** table 4.1 and **for** table 4.2”See `\cpagerefFor` at page 546 to redefine the message which is printed for page number references.**BibTeX errors with \etalchar:** See section 8.6.9.**Malformed URLs:** Do not use the % character between arguments of `\hyperref`, etc., as this character is among those which is neutralized for inclusion in HTML URLs.**Em-dashes or En-dashes in listing captions and titles:**Use X_{EL}LATEX or L_{UA}LATEX.**Floats out of sequence:****Mixed “Here” and floating:** Floats [H]ere and regular floats may become out of order. `\clearpage` if necessary.**Caption setup:** With `\captionsetup` set the positions for the captions above or below to match their use in the source code.**Images are appearing in strange places:**

- Enter `lwarpmk limages` to refresh the `lateximage` images.

SVG images:**⚠️ adding/removing**When a math expression, picture, or Tikz environment is added or removed, the SVG images must be re-created by entering `lwarpmk limages` to maintain the proper image-file associations. Inline SVG math may be hashed and thus not need to be recreated, but display math and objects such as Tikz may move to new image numbers when the document is changed.**recompile first**Before attempting to create the SVG image files, `lwarpmk` verifies that the HTML version of the document exists and has correct internal image references.¹⁵ If it is necessary to recompile the document's HTML version one more time, `lwarpmk` usually will inform the user with an error message, but there are some conditions which cannot be detected, so the user should watch for the L_{ATE}X recompile warnings.

If HTML appears where an SVG image should be, recompile the document one

¹⁵This becomes important when dealing with a document containing thousands of images.

more time to get the page numbers back in sync, then remake the images one more time.

⚠️ page counter

Incorrect SVG images will also occur if the document changes the page counter:

```
\setcounter{page}{<value>}
```

The page counter must *not* be adjusted by the user.

⚠️ Lots of files!

Expressing math as SVG images has the advantage of representing the math exactly as L^AT_EX would, but has the disadvantage of requiring an individual file for each math expression. For inline math, and some other objects, lwarp uses an MD5 hash on its L^AT_EX source to combine multiple instances of identical inline expressions into a single image file, but display math and other environments such as picture and Tikz require one image file each. For a document with a large amount of math, see section 5.5 to use MATHJAX instead.

Plain-looking document:

- The document's CSS stylesheet may not be available, or may be linked incorrectly. Verify any \CSSFilename statements point to a valid CSS file.

⚠️ HTML corrupted

Broken fragments of HTML:

- Check the PDF file used to create HTML to see if the tags overflowed the margin. (This is why such large page size and margins are used.)

Changes do not seem to be taking effect:

- Be sure to lwarpmk clean, recompile, then start by reloading the home page. You may have been looking at an older version of the document. If you changed a section name, you may have been looking at the file for the old name.
- See the warning regarding changes to the HTML settings at section 7.6.
- Verify that the proper CSS is actually being used.
- The browser may compensate for some subtle changes, such as automatically generating ligatures, reflowing text, etc.

Un-matched conditional compiles:

- Verify the proper begin/end of warpprint, warpHTML, and warpall environments.

13.2.1 Debug tracing output

\tracinglwarp When \tracinglwarp is used, lwarp will add extra tracing messages to the .log file. The last several messages may help track down errors.

Place \tracinglwarp just after \usepackage{lwarp} to activate tracing.

13.3 Compiling the `l warp.dtx` file

l warp_tutorial.tex: Copy or link `l warp_tutorial.txt` from the TDS doc directory to the source directory, or wherever you wish to compile the documentation. This file is included verbatim in the documentation, but is in the doc directory so that it may be found by `texdoc` and copied by the user.

Illogical error messages caused by an out-of-sync `l warp.sty` file:

1. Delete the `l warp.sty` file.
2. Enter `pdflatex l warp.ins` to generate a new `l warp.sty` file.
3. Enter `pdflatex l warp.dtx` to recompile the `l warp.pdf` documentation.

Un-nested environments:

Be sure to properly nest:

- `\begin{macrocode}` and `\end{macrocode}`
- `\begin{macro}` and `\end{macro}`
- `\begin{environment}` and `\end{environment}`

File 1 **lwarp.sty**

15 Implementation

This package is perhaps best described as a large collection of smaller individual technical challenges, in many cases solved through a number of erude hacks clever tricks. Reference sources are given for many of the solutions, and a quick internet search will provide additional possibilities.

Judgement calls were made, and are often commented. Improvements are possible. The author is open to ideas and suggestions.

Packages were patched for re-use where they provided significant functionality. Examples include `xcolor` with its color models and conversion to `HTML` color output, and `siunitx` which provides many number and unit-formatting options, almost all of which are available in pure-text form, and thus easily used by `pdftotext`.

Packages were emulated where their primary purpose was visual formatting which is not relevant to `HTML` output. For example, packages related to sectioning are already patched by numerous other packages, creating a difficult number of combinations to try to support, and yet in `HTML` output all of the formatting is thrown away, so these packages are merely emulated.

Packages with graphical output are allowed as-is, but must be nested inside a `lateximage` environment to preserve the graphics.

Testing has primarily been done with the Iceweasel/Firefox browser.

Table 9: Section depths and HTML headings

Section	L <small>A</small> T <small>E</small> X depth	HTML headings [*]
Title of the entire website		<h1>
(none)	-5	new for this package
book	-2	<div class = "book">
part	-1	<h2>
chapter	0	<h3>
section	1	<h4>
subsection	2	<h5>
subsubsection	3	<h6>
paragraph	4	
subparagraph	5	
listitem	7	new for this package, used for list items

* If FormatWP is true, section headings may be adjusted, depending on WPTitleHeading. See table 8 on page 175.

16 Section depths and HTML headings

Stacks are created to track depth inside the LATEX document structure. This depth is translated to HTML headings as shown in table 9. “Depth” here is not depth in the traditional computer-science stack-usage sense, but rather a representation of the nesting depth inside the LATEX document structure.

When starting a new section, the program first must close out any existing sections and lists of a deeper level to keep the HTML tags nested correctly.

Support for the memoir package will require the addition of a book level, which may push the HTML headings down a step, and also cause subsubsection to become a <div> due to a limit of six HTML headings.

It is possible to use HTML5 <section> and <h1> for all levels, but this may not be well-recognized by older browsers.

Fixed levels for parts and chapters allow the css to remain fixed as well.

17 Source code

This is where the documented source code for `lwarp` begins, continuing through the following sections all the way to the change log and index at the end of this document.

The following sections document the actual implementation of the `lwarp` package.

line numbers The small numbers at the left end of a line refer to line numbers in the `lwarp.sty` file.

subjects Blue-colored tags in the left margin aid in quickly identifying the subject of each paragraph.

objects Black-colored tags in the left margin are used to identify programming objects such as files, packages, environments, booleans, and counters. Items without a tag are

index entries command macros. Each of these also appears in the index as individual entries, and are also listed together under “files”, “packages”, “environments”, “booleans”, and “counters”.

 **warnings** Special warnings are marked with a warning icon.

for HTML output: Green-colored tags in the left margin show which sections of source code apply to the generation of HTML, print, or both forms of output.

for PRINT output:

for HTML & PRINT:

Pkg `letltxmacro`

```
22 \RequirePackage{letltxmacro}
```

20 Package load order

Several packages must never be used with `l warp`, others should only be loaded before `l warp`, and others should only be loaded after. The `l warp` core checks most of these

cases. In some l warp-* packages, \LWR@loadbefore is used to trigger an error if they are loaded after l warp, while additional code provides necessary patches for when they are loaded before.

Packages which must be loaded after l warp are enforced by a large number of \LWR@loadafter statements, below. Some packages are emulated by memoir, and so these are tested by \LWR@notmemoirloadafter, which does not cause an error if memoir is used.

\LWR@checkloadfilename is used to check each filename to see if it must never be loaded, or must always be loaded before l warp.

20.1 Tests of package load order

\LWR@loadafter {<packagename>} Error if this package was loaded before l warp.

```

23 \newcommand*{\LWR@loadafter}[1]{%
24 \@ifpackageloaded{#1}%
25 {%

21 MD5 hashing

The MD5 hash is used for `\teximage` filenames for SVG math.

```
593 \newcommand{\LWR@mdfive}[1]{%
594 \PackageError{lwarf}%
595 {No MD5 macro was found}%
596 {Lwarf must find the macros \pdfmdfivesum or \mdfivesum.}%
597 }
```

The default for pdf^{LATEX}, dv^I^{LATEX}, up^{LATEX}, etc:

```
598 \let\LWR@mdfive\pdfmdfivesum
```

For Lua^{LATEX}:

```
599 \ifLuaTeX
600 \RequirePackage{pdftexcmds}
601 \let\LWR@mdfive\pdf@mdfivesum
602 \fi
```

For Xe^{LATEX}:

```
603 \ifXeTeX
604 \@ifundefined{pdffivesum}{}
605   {\let\LWR@mdfive\pdfmdfivesum}
606 \@ifundefined{mdfivesum}{}
607   {\let\LWR@mdfive\mdfivesum}
608 \fi
```

22 pdf^{LATEX} T1 and UTF-8 encoding

When using pdf^{LATEX}, lwarf requires T1 encoding, and recommends UTF-8 encoding.

If some other input encoding is already defined, lwarf will try to use it instead, and hope for the best.

Xe^{LATEX} and Lua^{LATEX} are both UTF-8 by nature.

`\LWR@pdfencoding` Sets T1, and also utf8 if not already set.

```
609 \newcommand*{\LWR@pdfencoding}{%
610   \RequirePackage[T1]{fontenc}
611
612   \@ifpackageloaded{inputenc}{}{%
613     \@ifpackageloaded{inputenx}{}{%
614       \RequirePackage[utf8]{inputenc}
615     }%
616   }%
617 }
```

```

618 \ifPDFTeX% pdflatex or dvi latex
619     \LWR@pdfencoding
620 \fi
621
622 \ifpTeX
623     \LWR@pdfencoding
624 \fi

```

23 Unicode input characters

for HTML & PRINT: If using *pdflatex*, convert a minimal set of Unicode characters. Additional characters may be defined by the user, as needed.

A commonly-used multiply symbol is declared to be `\textttimes`.

The first arguments of `\newunicodechar` below are text ligatures in the source code, even though they are not printed in the following listing.

```

625 \ifpTeX
626 \else
627 \RequirePackage{newunicodechar}
628
629 \newunicodechar{x}{\textttimes}
630
631 \ifPDFTeX% pdflatex or dvi latex
632 \newunicodechar{ff}{ff}% the first arguments are ligatures
633 \newunicodechar{fi}{fi}
634 \newunicodechar{fl}{fl}
635 \newunicodechar{ffi}{ffi}
636 \newunicodechar{ffl}{ffl}
637 \newunicodechar{--}{---}
638 \newunicodechar{--}{--}
639 \fi
640
641 \fi

```

24 Avoid a bitmapped font

If DVI or PDF L^AT_EX, and if the default Computer Modern is the selected font family, ensure that `cm-super` or `lmodern` is used to provide a vector font.

```

642 \ifxetexorluatex
643 \else
644     \ifdefstring{\f@family}{cmr}{
645         \IfFileExists{type1ec.sty}{% found in cm-super
646             {}
647             \% cm-super not installed
648             \IfFileExists{lmodern.sty}{
649                 \PackageInfo{lwarp}{cm-super not installed, loading lmodern}
650                 \RequirePackage{lmodern}

```

```

651      }{
652          \PackageError{lwarp}
653          {%
654              Lwarp requires a vector font.\MessageBreak
655              Install and load cm-super, lmodern, or another\MessageBreak
656              Type-1 vector font before loading lwarp%
657          }
658          {%
659              Install cm-super or lmodern.\MessageBreak
660              If lmodern, load it before lwarp:\MessageBreak
661                  \space\space\protect\usepackage{lmodern}\MessageBreak
662                  \space\space\protect\usepackage{lwarp}%
663          }
664      }
665      }% cm-super not installed
666  }{}% f@family
667 \fi

```

25 Upright quotes

In PDFTeX, preserve upright quotes in verbatim text. `upquote` also loads `textcomp`.

```

668 \ifPDFTeX
669 \RequirePackage{upquote}
670 \fi
671
672 \ifTeX
673     \RequirePackage{upquote}
674 \fi

```

26 Miscellaneous tools

26.1 Lengths and units

`\LWR@providelength` {`\lengthname`} Provides the length if it isn't defined yet.

Used to provide source compatibility for lengths which will be ignored, but might or might not be already provided by other packages.

```

675 \newcommand*\LWR@providelength[1]{%
676     \ifdeflength{#1}{}{\newlength{#1}}%
677 }

```

`\LWR@convertto` {`dest unit`} {`length`}

Prints a length in the given units, without printing the unit itself.

```

678 \newcommand*\LWR@convertto[2]{\strip@pt\dimexpr #2*65536/\number\dimexpr 1#1}

```

\LWR@printpercentlength {*smaller*} {*larger*}

Prints a percent ratio of the two lengths.

```
679 \newcommand*{\LWR@printpercentlength}[2]{%
680     \setcounter{LWR@tempcountone}{100*\ratio{#1}{#2}}%
681     \arabic{LWR@tempcountone}%
682 }
```

26.2 Patching

\LWR@patcherror {*packagename*} {*macroname*}

Prints an error if could not patch a macro.

```
683 \newcommand*{\LWR@patcherror}[2]{%
684 \PackageError{lwarp}%
685 {Unable to patch package #1, macro #2}%
686 {Please contact the author of the lwarp package.}%
687 }
```

26.3 Chinese text isolation

\LWR@isolate {*text*} Isolates Chinese characters from the surrounding text. This is required to avoid extra spaces on either side of the Chinese characters, especially when written to a file.

```
688 \newcommand{\LWR@isolate}[1]{#1}%
689
690 \@ifpackageloaded{ctexpatch}{%
691     \renewcommand{\LWR@isolate}[1]{\null#1\null}%
692 }{}%
693
694 \@ifpackageloaded{xeCJK}{%
695     \renewcommand{\LWR@isolate}[1]{\null#1\null}%
696 }{}
```

26.4 Inserting vertical space

\LWR@forceemptyline Extra vertical space in the HTML output. Use after \LWR@stopars.

```
697 \newcommand*{\LWR@forceemptyline}{%
698     \LWR@origrule{0pt}{1\baselineskip}%
699     \LWR@orignewline%
700 }
```

26.5 Argument selection

```
\LWR@firstoffour {⟨first⟩} {⟨second⟩} {⟨third⟩} {⟨fourth⟩}
```

```
\LWR@secondoffour {⟨first⟩} {⟨second⟩} {⟨third⟩} {⟨fourth⟩}
```

```
\LWR@thirdoffour {⟨first⟩} {⟨second⟩} {⟨third⟩} {⟨fourth⟩}
```

```
\LWR@fourthoffour {⟨first⟩} {⟨second⟩} {⟨third⟩} {⟨fourth⟩}
```

Expands to the nth of the four arguments. Used for extra cross referencing.

```
701 \long\def\LWR@firstoffour#1#2#3#4{#1}
702 \long\def\LWR@secondoffour#1#2#3#4{#2}
703 \long\def\LWR@thirdoffour#1#2#3#4{#3}
704 \long\def\LWR@fourthoffour#1#2#3#4{#4}
```

26.6 Global boxes

```
\LWR@gsavebox {⟨macroname⟩} {⟨contents⟩}
```

From <https://tex.stackexchange.com/questions/288702/savebox-forgets-its-content-across-columns-inside-align>

```
705 \DeclareRobustCommand{\LWR@gsavebox}[1]{%

727     \endpfalse
```

```
728     \color@setgroup
729         \ignorespaces}
730 \let\LWR@endlrbox\LWR@endlrbox
```

27 Operating-System portability

Prog Unix	lwarp tries to detect which operating system is being used. UNIX / MAC OS / LINUX is the default (collectively referred to as “UNIX” in the configuration files), and MS-WINDOWS is supported as well.
Prog Mac OS	
Prog Linux	
Prog MS-Windows	If MS-WINDOWS is not correctly detected, use the <code>lwarp</code> option <code>OSWindows</code> .
Prog Windows	
Opt OSWindows	When detected or specified, the operating-system path separator used by <code>lwarp</code> is modified, and the boolean <code>usingOSWindows</code> is set true. This boolean may be tested by the user for later use.

27.1 Literal characters

Literal characters to be used in `PrintLatexCmd` and `HTMLLatexCmd`. These are defined without @ to easily allow their inclusion in the user's document.

The literal % character:

```
731 \let\LWRpercent\@percentchar
```

The literal \$ character:

```
732 \catcode`\$=12
733 \def\LWRdollar{\$}
734 \catcode`\$=3
```

The literal & character:

```
735 \catcode`\&=12
736 \def\LWRamp{\&}
737 \catcode`\&=4
```

The literal \ character. The ampersand is temporarily set to the escape character during the definition of the backslash macro.

```
738 \catcode`\&=0
739 &\catcode`\&=12
740 &\def&\LWRbackslash{\}
741 &\catcode`\&=0
742 \catcode`\&=4
```

The literal { character. The ampersand is temporarily set to the begin group character during the definition of the leftbrace macro.

```

743 \catcode`\&=1
744 \catcode`\{=12
745 \def\LWRleftbrace&{}
746 \catcode`\{=1
747 \catcode`\&=4

```

The literal } character. The ampersand is temporarily set to the end group character during the definition of the leftbrace macro.

```

748 \catcode`\&=2
749 \catcode`\}=12
750 \def\LWRrightbrace{}&
amp;
751 \catcode`\}=2
752 \catcode`\&=4

```

The literal # character:

```

753 \catcode`\#=12
754 \def\LWRhash{#}
755 \catcode`\#=6

```

\LWRopquote The operating system's quote mark, UNIX default. For WINDOWS, see \LWR@setOSWindows, below.

```
756 \def\LWRopquote{'}
```

\LWRopseq The operating system's sequential execution command, UNIX default. For WINDOWS, see \LWR@setOSWindows, below.

```
757 \def\LWRopseq{\space\LWRamp\LWRamp\space\space}
```

27.2 Common portability code

Bool usingOSWindows Set if the OSWindows option is used, or if WINDOWS is automatically detected.

```

758 \newbool{usingOSWindows}
759 \boolfalse{usingOSWindows}

```

27.3 UNIX, LINUX, and MAC OS

\OSPathSymbol Symbol used to separate directories in a path.

```
760 \newcommand*\OSPathSymbol{/}
```

27.4 MS-WINDOWS

For MS-WINDOWS:

\LWR@setOSWindows Set defaults for the MS-WINDOWS operating system. `lwarp` attempts to auto-detect the operating system, and the `OSWindows` option may also be used to force MS-WINDOWS compatibility.

```
761 \newcommand*\{\LWR@setOSWindows}
762 {
763 \booltrue{usingOSWindows}
764 \renewcommand*\{\OSPathSymbol}{\@backslashchar}
765 \def\LWRopquote{"}
766 \def\LWRopseq{\space\LWRamp\space\space}
767 }
```

Test for windows during compile. The user may also specify `OSWindows` package option in case this test fails.

```
768 \ifwindows
769 \LWR@setOSWindows
770 \fi
```

28 Package options

Pkg kvoptions Allows key/value package options.

```
771 \RequirePackage{kvoptions}
772 \SetupKeyvalOptions{family=LWR,prefix=LWR@}
```

\l warpsetup A user interface to set the keys:

```
773 \newcommand{\l warpsetup}[1]{\setkeys{LWR}{#1}}
```

Bool warpingprint

Bool warpingHTML

Bool mathjax

Bool LWR@origmathjax

Set to true/false depending on the package option selections for print/HTML/EPUB output and mathsvg/mathjax.

`LWR@origmathjax` remembers the original setting to be restored by `\displaymathnormal`.

```
774 \newbool{warpingprint}
775 \newbool{warpingHTML}
776 \newbool{mathjax}
777 \newbool{LWR@origmathjax}
```

defaults The default is print output, and SVG math if the user chose HTML output.

```
778 \booltrue{warpingprint}%
779 \boolfalse{warpingHTML}%
780 \boolfalse{mathjax}%
```

Opt warpprint If the `warpprint` option is given, boolean `warpingprint` is true and boolean `warpingHTML`

is false, and may be used for `\ifbool` tests.

```
781 \DeclareVoidOption{warpprint}{%
782 \PackageInfo{l warp}{Using option 'warpprint'}%
783 \booltrue{warpingprint}%
784 \boolfalse{warpingHTML}%
785 }
```

Opt `warpHTML` Anything in the `warpHTML` environment will be generated for HTML output only.

Opt `warpHTML` If the `warpHTML` option is given, boolean `warpingHTML` is true and boolean `warpingprint` is false, and may be used for `\ifbool` tests.

```
786 \DeclareVoidOption{warpHTML}{%
787 \PackageInfo{l warp}{Using option 'warpHTML'}%
788 \booltrue{warpingHTML}%
789 \boolfalse{warpingprint}%
790 }
```

Opt `mathsvg` Option `mathsvg` selects SVG math display: If the `mathsvg` option is given, boolean `mathjax` is false, and may be used for `\ifbool` tests.

```
791 \DeclareVoidOption{mathsvg}{%
792 \PackageInfo{l warp}{Using option 'mathsvg'}%
793 \boolfalse{mathjax}%
794 \boolfalse{LWR@origmathjax}%
795 }
```

Opt `mathjax` Option `mathjax` selects MATHJAX math display: If the `mathjax` option is given, boolean `mathjax` is true, may be used for `\ifbool` tests.

```
796 \DeclareVoidOption{mathjax}{%
797 \PackageInfo{l warp}{Using option 'mathjax'}%
798 \booltrue{mathjax}%
799 \booltrue{LWR@origmathjax}%
800 }
```

Opt `BaseJobname` Option `BaseJobname` sets the `\BaseJobname` for this document.

Default: `\jobname`

This is the `\jobname` of the printed version, even if currently compiling the HTML version. I.e. this is the `\jobname` without `_html` appended. This is used to set `\HomeHTMLFilename` if the user did not provide one.

```
801 \DeclareStringOption[\jobname]{BaseJobname}
```

Opt `ImagesDirectory` Option `ImagesDirectory` sets the name of the directory to use for the `lateximage` images.

Default: `\jobname-images`

```
802 \DeclareStringOption[\BaseJobname-images]{ImagesDirectory}
```

Opt `ImagesName` Option `ImagesName` sets the prefix to use for the `\teximage` images.

`Default: image-`

```
803 \DeclareStringOption[image-]{ImagesName}
```

Opt `makeindexStyle` Selects a custom `.ist` file. A customized file should be based on `lwarf.ist`, and must retain the lines related to `\hyperindexref`.

```
804 \DeclareStringOption[lwarf.ist]{makeindexStyle}
```

Opt `xindyStyle` Selects a custom `.xdy` file. A customized file should be based on `lwarf.xdy`, and must retain the line

```
(markup-locref :open "\hyperindexref{" :close "})
```

```
805 \DeclareStringOption[lwarf.xdy]{xindyStyle}
```

Opt `xindyLanguage` Sets the `xindy` language to be assigned in `lwarpmk`'s configuration files. This is then used by `lwarpmk` while processing the index and glossary.

```
806 \DeclareStringOption[english]{xindyLanguage}
```

Opt `xindyCodepage` Sets the `xindy` codepage to be assigned in `lwarpmk`'s configuration files. This is then used by `lwarpmk` while processing the index.

```
807 \DeclareStringOption[utf8]{xindyCodepage}
```

Opt `pdftotextEnc` The option `pdftotextEnc` sets the encoding used by `pdftotext`. This is passed to `pdftotext` using its `-enc` option, and is used when converting L^AT_EX PDF output with HTML tags into a plain-text file with HTML tags.

```
808 \DeclareStringOption[UTF-8]{pdftotextEnc}
```

Opt `lwarpmk` Tells `lwarf` to generate a local copy of `lwarpmk` called `lwarpmk.lua`. Useful for archiving for future use. This file may be made executable and acts just like `lwarpmk`.

If `lwarpmk` option, creates a local copy of `lwarpmk.lua`:

```
809 \newbool{LWR@creatinglwarpmk}
810 \boolefalse{LWR@creatinglwarpmk}
811
812 \DeclareVoidOption{lwarpmk}{}
813 \PackageInfo{lwarf}{Using option 'lwarpmk'}
814 \booltrue{LWR@creatinglwarpmk}
815 }
```

Opt `OSWindows` Tells `lwarf` to use MS-WINDOWS compatibility. Auto-detection of the operating system is attempted, and this option is only necessary if the auto-detection fails. See the automatically-generated `lwarpmk.conf` file to find out whether the operating system was detected correctly.

```
816 \DeclareVoidOption{OSWindows}{  
817 \PackageInfo{lwarp}{Using option 'OSWindows'}  
818 \LWR@setOSWindows  
819 }
```

Opt HomeHTMLFilename The filename of the homepage. The default is the jobname. This option is stored into \LWR@HomeHTMLFilename, and later transferred into \HomeHTMLFilename for internal use.

```
820 \DeclareStringOption[]{}{HomeHTMLFilename}
```

Opt HTMLFilename The filename prefix of web pages after the homepage. The default is empty, no prefix. This option is stored into \LWR@HTMLFilename, and later transferred into \HTMLFilename for internal use.

```
821 \DeclareStringOption[]{}{HTMLFilename}
```

Opt PrintLatexCmd The shell commands to use to compile the print document.
Default: <automatic>

```
822 \DeclareStringOption[]{}{PrintLatexCmd}
```

Opt HTMLLatexCmd The shell commands to use to compile the HTML document.
Default: <automatic>

```
823 \DeclareStringOption[]{}{HTMLLatexCmd}
```

Opt PrintIndexCmd The shell commands to use to compile the print indexes.
Default: <empty>

```
824 \DeclareStringOption[]{}{PrintIndexCmd}
```

Opt HTMLIndexCmd The shell commands to use to compile the HTML indexes.
Default: <empty>

```
825 \DeclareStringOption[]{}{HTMLIndexCmd}
```

Opt LatexmkIndexCmd The shell commands to be used by *latexmk* to compile the print indexes. Unlike PrintIndexCmd and HTMLIndexCmd, LatexmkIndexCmd does not include the filename, which will be provided by *latexmk*.

```
826 \DeclareStringOption[]{}{LatexmkIndexCmd}
```

Opt makeindex Tells lwarp to use *makeindex* for index generation. When *lwarpmk.conf* and **.lwarpmkconf* are generated, PrintIndexCmd and HTMLIndexCmd will be set for *makeindex* with a single index file.

```
827 \DeclareBoolOption[false]{}{makeindex}
```

Opt xindy Tells lwarp to use *xindy* for index generation. When *lwarpmk.conf* and **.lwarpmkconf* are generated, PrintIndexCmd and HTMLIndexCmd will be set for *xindy* with a single index file.

```
828 \DeclareBoolOption[false]{}{xindy}
```

Opt `GlossaryCmd` The shell command to use to compile the glossary. The print or HTML version of the glossary filename will be appended to this command.
Default: `makeglossaries`

```
829 \DeclareStringOption[makeglossaries]{GlossaryCmd}
```

Opt `latexmk` Option `latexmk` tells *l warp mk* to use *latexmk* when compiling documents.

```
830 \DeclareBoolOption[false]{latexmk}
```

Opt `dvips` Option `dvips` tells *l warp mk* to use *dvips* when compiling DVI *latex* documents.

```
831 \DeclareBoolOption[false]{dvips}
```

Opt `dvipdfm` Option `dvipdfm` tells *l warp mk* to use *dvipdfm* when compiling DVI *latex* documents.

```
832 \DeclareBoolOption[false]{dvipdfm}
```

Opt `dvipdfmx` Option `dvipdfmx` tells *l warp mk* to use *dvipdfmx* when compiling DVI *latex* documents.

```
833 \DeclareBoolOption[false]{dvipdfmx}
```

Execute options Execute the package options, with the defaults which have been set just above:

```
834 \ProcessKeyvalOptions*\relax
```

28.1 Additional options support

Assign the `\BaseJobname` if the user hasn't provided one:

```
835 \providecommand*{\BaseJobname}{\LWR@BaseJobname}
```

Defaults unless already over-ridden by the user:

```
836 \ifcsempty{\LWR@HomeHTMLFilename}{  
837     \newcommand*{\HomeHTMLFilename}{\BaseJobname}  
838 }{  
839     \csedef{HomeHTMLFilename}{\LWR@HomeHTMLFilename}  
840 }  
841  
842 \csedef{HTMLFilename}{\LWR@HTMLFilename}
```

Special handling for underscores in labels and filenames.

`\LWR@sanitized` The sanitized version of what was given to `\LWR@sanitize`. Characters are set to their detokenized versions. Required for underscores in labels and filenames.

```
843 \newcommand*{\LWR@sanitized}{}  
844 \newcommand*{\LWR@detokenize}[1]{#1}
```

```
\LWR@sanitize {⟨text⟩}
```

Sanitizes the text and returns the result in \LWR@sanitized.

```
844 \newcommand*{\LWR@sanitize}[1]{%
845 \edef\LWR@sanitized{\#1}%
846 \edef\LWR@sanitized{\detokenize\expandafter{\LWR@sanitized}}%
847 }
```

Sanitize some string options to neutralize underscores.

```
848 \LWR@sanitize{\LWR@BaseJobname}
849 \edef\LWR@BaseJobname{\LWR@sanitized}
850
851 \LWR@sanitize{\LWR@ImagesDirectory}
852 \edef\LWR@ImagesDirectory{\LWR@sanitized}
853
854 \LWR@sanitize{\LWR@ImagesName}
855 \edef\LWR@ImagesName{\LWR@sanitized}
```

\LWR@PrintIndexCmd and \LWR@HTMLIndexCmd are tested to see if they are empty. If so, they are set to a reasonable defaults for a single index using *makeindex*, then possibly set to defaults for *xindy* if the lwarf xindy option was selected.

```
856 \ifdefempty{\LWR@PrintIndexCmd}{%
857   \renewcommand{\LWR@PrintIndexCmd}{%
858     makeindex -s \LWR@makeindexStyle \space \jobname.idx%
859   }
860   \ifbool{\LWR@xindy}{%
861     \renewcommand{\LWR@PrintIndexCmd}{%
862       xindy
863       -M \LWR@xindyStyle \space
864       -L \LWR@xindyLanguage \space
865       -C \LWR@xindyCodepage \space
866       \jobname.idx%
867     }
868   }{}%
869 }{}%
870
871 \ifdefempty{\LWR@HTMLIndexCmd}{%
872   \renewcommand{\LWR@HTMLIndexCmd}{%
873     makeindex -s \LWR@makeindexStyle \space \jobname_html.idx%
874   }
875   \ifbool{\LWR@xindy}{%
876     \renewcommand{\LWR@HTMLIndexCmd}{%
877       xindy
878       -M \LWR@xindyStyle \space
879       -L \LWR@xindyLanguage \space
880       -C \LWR@xindyCodepage \space
881       \jobname_html.idx%
882     }
883   }{}%
884 }{}%
```

```

886 \ifdefempty{\LWR@LatexmkIndexCmd}{
887     \renewcommand{\LWR@LatexmkIndexCmd}{%
888         makeindex -s \LWR@makeindexStyle%
889     }
890     \ifbool{LWR@xindy}{%
891         \renewcommand{\LWR@LatexmkIndexCmd}{%
892             xindy%
893             -M \LWR@xindyStyle \space
894             -L \LWR@xindyLanguage \space
895             -C \LWR@xindyCodepage%
896         }
897     }{}
898 }{}}

```

28.2 Conditional compilation

\warpprintonly {*contents*}

Only process the contents if producing printed output.

```
899 \newcommand{\warpprintonly}[1]{\ifbool{warpingprint}{#1}{}}
```

\warpHTMLonly {*contents*}

Only process the contents if producing HTML output.

```
900 \newcommand{\warpHTMLonly}[1]{\ifbool{warpingHTML}{#1}{}}
```

Pkg comment Provides conditional code blocks.

Attempts to use `versions` or `verbatim` fail in some cases, and do not provide much of a speed benefit even when they do work.

```
901 \RequirePackage{comment}
```

Use `comment_print.cut` for print mode, and `comment_html.cut` for HTML mode. This helps `latexmk` to more reliably know whether to recompile.

```

902 \ifbool{warpingHTML}%
903 {\def\DefaultCutFileName{\def\CommentCutFile{comment_html.cut}}%
904 }{}%
905 %
906 \ifbool{warpingprint}%
907 {\def\DefaultCutFileName{\def\CommentCutFile{comment_print.cut}}%
908 }{}%

```

Env warpall Anything in the `warpall` environment will be generated for print or HTML outputs.

```
909 \includecomment{warpall}
```

Env warpprint Anything in the warpprint environment will be generated for print output only.

Env warpHTML

For HTML output:

```
910 \ifbool{warpingHTML}
911 {\includecomment{warpHTML}}
912 {\excludecomment{warpHTML}}%
913 \ifbool{warpingprint}
914 {\includecomment{warpprint}}
915 {\excludecomment{warpprint}}
```

Optionally generate a local copy of *lwarpmk*. Default to no.

```
916 \ifbool{LWR@creatinglwarpmk}
917 {\includecomment{LWR@createlwarpmk}}
918 {\excludecomment{LWR@createlwarpmk}}
```

29 Required packages

These packages are automatically loaded by l warp when generating HTML output. Some of them are also automatically loaded when generating print output, but some are not.

for HTML output: 919 \begin{warpHTML}

Load fontspec if necessary:

```
920 \ifxetexorluatex
921 \@ifpackageloaded{fontspec}{}{
922     \usepackage[no-math]{fontspec}
923 }
```

The monospaced font is used for HTML tags, so turn off its TeX ligatures and common ligatures:

```
924 \defaultfontfeatures[\rmfamily]{Ligatures={NoCommon,TeX}}
925 \defaultfontfeatures[\sfamily]{Ligatures={NoCommon,TeX}}
926 \defaultfontfeatures[\ttfamily]{Ligatures=NoCommon}
927 \else
```

pdflatex only: Only pre-loaded if *pdflatex* is being used.

Pkg microtype

ligatures Older browsers don't display ligatures. Turn off letter ligatures, keeping LATEX dash and quote ligatures, which may fail on older browsers but at least won't corrupt written words.

```
928 \RequirePackage {microtype}
929
```

```

930 \microtypesetup{
931     protrusion=false,
932     expansion=false,
933     tracking=false,
934     kerning=false,
935     spacing=false}
936
937 \DisableLigatures[f,q,t,T,Q]{encoding = *,family = *}

938 \fi

939 \end{warpHTML}

```

Pkg `geometry` Tactics to avoid unwanted page breaks and margin overflow:

- Uses a very long and wide page to minimize page breaks and margin overflow.
- Uses a scriptsize font.
- Uses extra space at the margin to avoid `HTML` tag overflow off the page.
- Forces a new PDF page before some environments.
- Forces line break between major pieces of long tags.

for **HTML output**:

```
940 \begin{warpHTML}
```

If `geometry` has not yet been loaded, use the preexisting page and text sizes to be preserved for later reuse. These will be replaced by `lwarp \AtBeginDocument` with a very large page size to reduce `HTML` tag overflow off the page.

```

941 \@ifpackageloaded{geometry}
942 {}{
943     \RequirePackage[
944         reset,
945         paperwidth=\paperwidth,
946         paperheight=\paperheight,
947         textwidth=\textwidth,
948         textheight=\textheight,
949         left=\oddsidemargin,
950         top=\topmargin,
951         marginparsep=\marginparsep,
952         marginparwidth=\marginparwidth,
953     ]{geometry}
954 }

```

Remember the original definitions for later reuse. If the `geometry` package is loaded by the user, `lwarp-geometry` will nullify the user-level originals.

```

955 \LetLtxMacro{\LWR@origgeometry}{\geometry}
956 \LetLtxMacro{\LWR@orignewgeometry}{\newgeometry}
957 \LetLtxMacro{\LWR@origrestoregeometry}{\restoregeometry}
958 \LetLtxMacro{\LWR@origsavegeometry}{\savegeometry}
959 \LetLtxMacro{\LWR@origloadgeometry}{\loadgeometry}

```

`Bool LWR@allowanothergeometry` `geometry` may be loaded by the user before `l warp`, after `l warp`, or not at all. If before `l warp`, it will have already been loaded by now and its page layout has already been saved. If `geometry` is loaded after `l warp`, its layout will be set at that time and the user macros nullified. `\AtEndPreamble` this layout will be saved. If the user never loads `geometry`, `l warp-geometry` will be loaded `\AtBeginDocument`, but it should not change the page layout set here. This is controlled by the boolean `LWR@allowanothergeometry`. Geometry may be adjusted throughout the preamble until `\AtEndPreamble`, when this boolean is set false.

```
960 \newbool{LWR@allowanothergeometry}
961 \booltrue{LWR@allowanothergeometry}
```

Use `\AtEndPreamble` to avoid class and option conflict by changing settings after other packages load, instead of using `geometry` package options:

```
962 \AtEndPreamble{
```

Whatever geometry choices the user has made in the preamble, either before or after `l warp` was loaded, are now saved for possible temporary reuse, such as by `lyluatex`.

See the `l warp-geometry` section for what happens if `geometry` is loaded after `l warp`.

```
963 \LWR@origsavegeometry{LWR@usergeometry}
```

The user's paper size is saved for later reuse, such as by the `pdfpages` package.

```
964 \newlength{\LWR@userspaperwidth}
965 \setlength{\LWR@userspaperwidth}{\paperwidth}
966
967 \newlength{\LWR@userspaperheight}
968 \setlength{\LWR@userspaperheight}{\paperheight}
969
970 \newlength{\LWR@usersmarginparwidth}
971 \setlength{\LWR@usersmarginparwidth}{\marginparwidth}
```

For `l warp`, use a very large page and margins to help avoid letting HTML tags run off the edge:

```
972 \LWR@origgeometry{
973     reset,
974     paperheight=190in,
975     paperwidth=20in,
976     left=2in,
977     right=6in,
978     top=1in,
979     bottom=1in,
980     heightrounded,%
981 }
```

The `l warp` page geometry is saved for future restore:

```
982 \LWR@origsavegeometry{LWR@l warpgeometry}
```

No longer adjust the page layout when `lwarp-geometry` is loaded `\AtBeginDocument`:

983 `\boolearn{LWR@allowanothergeometry}`%

`ltjsbook` and other classes can print vertically, and require these to be reset by `lwarp`:

984 `\setlength{\textheight}{0.8\paperheight}`
985 `\setlength{\textwidth}{0.7\paperwidth}`
986
987 `\@twosidefalse`
988 `\@mparswitchfalse`
989 `}% \AtEndPreamble`
990
991 `\end{warpHTML}`

for HTML & PRINT: 992 `\begin{warpall}`

Pkg `xparse`

L^AT_EX3 command argument parsing

993 `\RequirePackage{xparse}`

Pkg `calc`

994 `\RequirePackage{calc}`

995 `\end{warpall}`

for HTML output: 996 `\begin{warpHTML}`

Pkg `expl3`

L^AT_EX3 programming

997 `\RequirePackage{expl3}`

Pkg `getttitlestring`

Used to emulate `\nameref`.

998 `\RequirePackage{getttitlestring}`

Pkg `everyhook`

`everyhook` is used to patch paragraph handling.

999 `\@ifundefined{bxjs@everypar}{}{\let\everypar\bxjs@everypar}`

1000

1001 `\RequirePackage{everyhook}`

1002 `\end{warpHTML}`

for HTML & PRINT: 1003 `\begin{warpall}`

Pkg filecontents

Used to write helper files while creating the print version.

Recent versions of L^AT_EX (as of Fall 2019) now include the functionality of the filecontents package, but with a new optional argument used to specify whether to force the overwriting of an existing file. If an older L^AT_EX kernel is used, the original filecontents package is used, but it is patched to throw away the new optional argument.

```
1004 \@ifundefined{filec@ntents@opt}{% older kernel, discard optional args
1005
1006     \RequirePackage{filecontents}
1007
1008     \LetLtxMacro\LWR@orig@filec@ntents\filec@ntents
1009
1010     \@ifpackagelater{filecontents}{2011/10/08}
1011     {
```

For a newer version of the filecontents package, simply discard the optional argument.

```
1012         \renewcommand*{\filec@ntents}[1][]{\LWR@orig@filec@ntents}
1013     }
1014     {% patch older package for morewrites
```

For an older version of filecontents, discard the optional argument, and also patch to work with morewrites, per <https://tex.stackexchange.com/questions/312830/does-morewrites-not-support-filecontents-and-can-i-write-body-of-environment-us/312910>

```
1015     \newwrite\fcwrite
1016     \renewcommand*{\filec@ntents}[1][]{
1017         \def\chardef##1\write{\let\reserved@c\fcwrite}%
1018         \LWR@orig@filec@ntents%
1019     }
1020 }
1021
1022 }% older kernel
1023 {% newer kernel
```

For a newer kernel with a filecontents environment which accepts the optional overwrite argument, use the environment as-is.

```
1024 }% newer kernel, filecontents env accepts optional args, do not load package
```

```
1025 \end{warpall}
```

for HTML output: 1026 \begin{warpHTML}

Pkg xifthen

```
1027 \RequirePackage{xifthen}
```

Pkg verbatim

1028 \RequirePackage{verbatim}

Pkg refcount

Provides \setcounterref, \setcounterpageref, etc.

1029 \RequirePackage{refcount}

Pkg newfloat

1030 \RequirePackage{newfloat}

1031 \end{warpHTML}

for HTML & PRINT: 1032 \begin{warpall}

Pkg xstring There was a short-term bug in xstring regarding \IfInteger which affected lwarps's
⚠️ index index generation. The updated version is requested here.

1033 \RequirePackage{xstring}[2019/02/01]

Pkg environ Used to encapsulate math environments for re-use in HTML <alt> text.

1034 \RequirePackage{environ}

1035 \end{warpall}

for HTML output: 1036 \begin{warpHTML}

Pkg printlen Used to convert lengths for image width/height options.

1037 \RequirePackage{printlen}

\LWR@printlength {\langle length \rangle}

Prints a length using a locally-controlled unit and space. Rounding is used unless the length is small.

1038 \newrobustcmd*{\LWR@printlength}[1]{%
1039 \begingroup%
1040 \uselengthunit{PT}%"
1041 \renewcommand*{\unitspace}{ }%
1042 \ifdimless{#1}{10pt}{%
1043 \printlength{#1}%
1044 }{ %
1045 \rndprintlength{#1}%
1046 }%
1047 \endgroup%
1048 }

```

1049 \end{warpHTML}

for PRINT output: 1050 \begin{warpprint}

Pkg varwidth Used for print-mode lateximage.

1051 \RequirePackage{varwidth}

1052 \end{warpprint}

```

30 Loading packages

for HTML & PRINT: 1053 \begin{warpall}

Remember the original \RequirePackage:

```

1054 \LetLtxMacro{\LWR@origRequirePackage}{\RequirePackage}
1055 \LetLtxMacro{\LWR@origRequirePackageWithOptions}{\RequirePackageWithOptions}

```

\LWR@requirepackagenames Stores the list of required package names.

```
1056 \newcommand*{\LWR@requirepackagenames}{}{}
```

\LWR@parsedrequirepackagenames Stores the parsed list of required package names after spaces are removed and lwarp- is prepended.

```
1057 \newcommand*{\LWR@parsedrequirepackagenames}{}{}
```

\LWR@nullifycomment Remove the preexisting comment environment. Certain packages define it for their own use.

```

1058 \newcommand*{\LWR@nullifycomment}{}{%
1059     \PackageInfo{lwarp}{%
1060         Nullifying the comment environment before loading \LWR@strresulttwo,}%
1061     \let\comment\relax%
1062     \let\endcomment\relax%
1063 }

```

\LWR@findword [*1: separator*] {[*2: list*] } {[*3: index*] } {[*4: destination*] }

Note that argument 4 is passed directly to \StrBetween.

```

1064 \newcommand*{\LWR@findword}[3][,]{%
1065     \StrBetween[#3,\numexpr#3+1]{#1#2#1}{#1}{#1}%
1066 }

```

\LWR@checkloadfilename {[*filename*] } Checks if this filename should be loaded after lwarp, or never at all.

The following should never be loaded:

```

1067 \newcommand*{\LWR@checkloadfilename}[1]{%
1068 \LWR@checkloadnever{\#1}{ae}{latinmodern}
1069 \LWR@checkloadnever{\#1}{aecc}{latinmodern}
1070 \LWR@checkloadnever{\#1}{alg}{algorithm2e, algorithmicx}
1071 \LWR@checkloadnever{\#1}{algorithmic}{algorithm2e, algorithmicx}
1072 \LWR@checkloadnever{\#1}{bitfield}{bytefield}
1073 \LWR@checkloadnever{\#1}{boxedminipage}{boxedminipage2e}
1074 \LWR@checkloadnever{\#1}{caption2}{caption}
1075 \LWR@checkloadnever{\#1}{ccaption}{caption}
1076 \LWR@checkloadnever{\#1}{colortab}{colortbl}
1077 \LWR@checkloadnever{\#1}{doublespace}{setspace}
1078 \LWR@checkloadnever{\#1}{epsf}{graphicx}
1079 \LWR@checkloadnever{\#1}{fancyheadings}{fancyhdr}
1080 \LWR@checkloadnever{\#1}{fncylab}{cleveref}
1081 \LWR@checkloadnever{\#1}{glossary}{glossaries}
1082 \LWR@checkloadnever{\#1}{hyper}{hyperref}
1083 \LWR@checkloadnever{\#1}{newthm}{ntheorem}
1084 \LWR@checkloadnever{\#1}{pdfcprot}{microtype}
1085 \LWR@checkloadnever{\#1}{picinpar}{floatflt, wrapfig}
1086 \LWR@checkloadnever{\#1}{picins}{floatflt, wrapfig}
1087 \LWR@checkloadnever{\#1}{rplain}{fancyhdr}
1088 \LWR@checkloadnever{\#1}{si}{siunitx}
1089 \LWR@checkloadnever{\#1}{sistyle}{siunitx}
1090 \LWR@checkloadnever{\#1}{t1enc}{fontenc, inputenc, inputenx}
1091 \LWR@checkloadnever{\#1}{ucs}{inputenc, inputencx}
1092 \LWR@checkloadnever{\#1}{wasysym}{textcomp, amssymb, amsfonts, mnsymbol, fdsymbol}

```

The following should only be loaded before l warp:

```

1093 \LWR@checkloadbefore{\#1}{ctex}
1094 \LWR@checkloadbefore{\#1}{fontspec}
1095 \LWR@checkloadbefore{\#1}{inputenc}
1096 \LWR@checkloadbefore{\#1}{inputenx}
1097 \LWR@checkloadbefore{\#1}{nfssext-cfr}
1098 \LWR@checkloadbefore{\#1}{fontaxes}
1099 \LWR@checkloadbefore{\#1}{kotex}
1100 \LWR@checkloadbefore{\#1}{luatexja}
1101 \LWR@checkloadbefore{\#1}{luatexja-fontspec}
1102 \LWR@checkloadbefore{\#1}{luatexko}
1103 \LWR@checkloadbefore{\#1}{morewrites}
1104 \LWR@checkloadbefore{\#1}{newclude}
1105 \LWR@checkloadbefore{\#1}{newunicodechar}
1106 \LWR@checkloadbefore{\#1}{plext}
1107 \LWR@checkloadbefore{\#1}{xeCJK}
1108 \LWR@checkloadbefore{\#1}{xetexko}
1109 \LWR@checkloadbefore{\#1}{zxjatype}
1110 }

```

\LWR@lookforpackagename {*<index>*}

If HTML, and if this is an l warp-supported package name, re-direct it to the l warp version by renaming it l warp- followed by the original name.

Looks index deep into the list of package names, `\LWR@requirepackagenames`, and builds `\LWR@parsedrequirepackagenames` which is the modified list of names.

```
1111 \newcommand*{\LWR@Lookforpackagename}[1]{%
```

Find the `index`'th package name from the list:

```
1112 \LWR@findword{\LWR@requirepackagenames}{#1}[\LWR@strresult]%
```

Remove blanks. The original name with blanks is in `\LWR@strresult` and the final name with no blanks goes into `\LWR@strresulttwo`.

```
1113 \StrSubstitute[100]{\LWR@strresult}{}{\LWR@strresulttwo}%
```

See if the package name was found:

```
1114 \IfStrEq{\LWR@strresulttwo}{}{%
1115 {}% no filename
1116 {}% yes filename was found}
```

Possible adjustments before loading the package. Maybe nullify the comment environment if the new package will be redefining it for a new purpose.

```
1117 \ifdefstring{\LWR@strresulttwo}{easyReview}{\LWR@nullifycomment}{}%
1118 \ifdefstring{\LWR@strresulttwo}{changes}{\LWR@nullifycomment}{}%
```

If `HTML`, check if the package should be loaded before `lwarp`, or never at all:

```
1119 \ifbool{warpingHTML}{\LWR@checkloadfilename{\LWR@strresulttwo}}{}%
```

If `HTML`, and if found, and if an `lwarp`-equivalent name exists, use `lwarp-*` instead.

```
1120 \ifboolexpr{
1121   bool{warpingHTML} and
1122   test{\IfFileExists{lwarp-\LWR@strresulttwo.sty}}
1123 }%
1124 {% lwarp-* file found
1125   \ifdefvoid{\LWR@parsedrequirepackagenames}{%
1126     \edef\LWR@parsedrequirepackagenames{lwarp-\LWR@strresulttwo}%
1127   }{%
1128     \edef\LWR@parsedrequirepackagenames{%
1129       \LWR@parsedrequirepackagenames, lwarp-\LWR@strresulttwo%
1130     }%
1131   }%
1132 }%
1133 {%
```

Otherwise, use the current package name.

```
1134 \ifdefvoid{\LWR@parsedrequirepackagenames}{%
1135   \edef\LWR@parsedrequirepackagenames{\LWR@strresulttwo}%
1136 }{%
1137   \edef\LWR@parsedrequirepackagenames{%
```

```

1138           \LWR@parsedrequirepackagenames, \LWR@strresulttwo%
1139       }%
1140   }%
1141   }% no l warp-* file
1142 }% yes filename
1143 }

```

\RequirePackage [*1: options*] {*2: package names*} [*3: version*]

For each of many package names in a comma-separated list, if an l warp version of a package exists, select it instead of the L^TE_X version.

```
1144 \RenewDocumentCommand{\RequirePackage}{o m o}{%
```

Redirect up to twenty names:¹⁶

```

1145 \renewcommand*{\LWR@requirepackagenames}{#2}%
1146 \renewcommand*{\LWR@parsedrequirepackagenames}{}%
1147 \LWR@Lookforpackagename{1}%
1148 \LWR@Lookforpackagename{2}%
1149 \LWR@Lookforpackagename{3}%
1150 \LWR@Lookforpackagename{4}%
1151 \LWR@lookforpackagename{5}%
1152 \LWR@lookforpackagename{6}%
1153 \LWR@lookforpackagename{7}%
1154 \LWR@lookforpackagename{8}%
1155 \LWR@lookforpackagename{9}%
1156 \LWR@lookforpackagename{10}%
1157 \LWR@lookforpackagename{11}%
1158 \LWR@lookforpackagename{12}%
1159 \LWR@lookforpackagename{13}%
1160 \LWR@lookforpackagename{14}%
1161 \LWR@lookforpackagename{15}%
1162 \LWR@lookforpackagename{16}%
1163 \LWR@lookforpackagename{17}%
1164 \LWR@lookforpackagename{18}%
1165 \LWR@lookforpackagename{19}%
1166 \LWR@lookforpackagename{20}%

```

\RequirePackage depending on the options and version:

```

1167 \IfValueTF{#1}%
1168 {%
1169   options given
1170   \IfValueTF{#3}%
1171     {%
1172       \LWR@origRequirePackage[#1]{\LWR@parsedrequirepackagenames}[#3]%
1173     }%
1174   no options given
1175   \IfValueTF{#3}%
1176     {%
1177       \LWR@origRequirePackage{\LWR@parsedrequirepackagenames}[#3]%
1178     }%
}

```

¹⁶This was originally nine names, but then I came across a package which used twelve...

```

1178 }
1179 \LetLtxMacro\usepackage\RequirePackage

1180 \end{warpall}
```

for HTML output: 1181 \begin{warpHTML}

\LWR@ProvidesPackagePass {⟨*pkgnname*⟩} [⟨*version*⟩]

Uses the original package, including options.

```

1182 \NewDocumentCommand{\LWR@ProvidesPackagePass}{m o}%
1183   \PackageInfo{l warp}{%
1184     Using package '#1' and adding l warp modifications,\MessageBreak
1185     including options,}%
1186 \IfValueTF{#2}%
1187   {\ProvidesPackage{l warp-#1}[#2]}
1188   {\ProvidesPackage{l warp-#1}}
1189 \DeclareOption*{%
1190   \PassOptionsToPackage{\CurrentOption}{#1}%
1191 }
1192 \ProcessOptions\relax%
1193 \IfValueTF{#2}%
1194   {\LWR@origRequirePackage[#1][#2]}%
1195   {\LWR@origRequirePackage[#1]}%
```

In some cases, the following seems to be required to avoid an “unknown option” error, such as when loading `xcolor` with options.

```

1196 \DeclareOption*{}%
1197 \ProcessOptions\relax%
1198 }
```

\LWR@ProvidesPackageDropA {⟨*name*⟩} {⟨*date or -NoValue-*⟩}

Declares the package. Factored for reuse.

```

1199 \newcommand*{\LWR@ProvidesPackageDropA}[2]{%
1200   \PackageInfo{l warp}{%
1201     Replacing package '#1' with the l warp version,\MessageBreak
1202     and discarding options,}%
1203   }%
1204   \IfValueTF{#2}%
1205   {\ProvidesPackage{l warp-#1}[#2]}
1206   {\ProvidesPackage{l warp-#1}}
1207 }
```

\LWR@ProvidesPackageDropB Nullifies then processes the options.

Seems to be required when options contain curly braces, which were causing “Missing `\begin{document}`”.

```

1208 \newcommand*{\LWR@ProvidesPackageDropB}{%
1209 % \ProcessOptions\relax% original LaTeX code
1210 \let\ds@\empty% from the original \ProcessOptions
1211 \edef\@curroptions{}% lwarp modification to \ProcessOptions
1212 \@process@ptions\relax% from the original \ProcessOptions
1213 }

```

\LWR@ProvidesPackageDrop {*pkgnname*} [*version*]

Ignores the original package and uses lwarp's version instead. Drops/discards all options.

```

1214 \NewDocumentCommand{\LWR@ProvidesPackageDrop}{m o}{}

```

Declare the package:

```

1215 \LWR@ProvidesPackageDropA{#1}{#2}

```

Ignore all options:

```

1216 \DeclareOption*{}

```

Process the options:

```

1217 \LWR@ProvidesPackageDropB
1218 }

```

```

1219 \end{warpHTML}

```

31 Additional required packages

for HTML output: 1220 \begin{warpHTML}

Pkg caption

```

1221 \LWR@origRequirePackage{caption}
1222 \AtBeginDocument{\RequirePackage{lwarp-caption}}%
1223 \end{warpHTML}

```

32 File handles

Defines file handles for writes.

for HTML & PRINT: 1224 \begin{warpall}

\LWR@quickfile For quick temporary use only. This is reused in several places.

1225 \newwrite\LWR@quickfile%

1226 \end{warpall}

for HTML output: 1227 \begin{warpHTML}

\LWR@lateximagesfile For <project>-images.txt:

1228 \newwrite\LWR@lateximagesfile

1229 \end{warpHTML}

33 Include a file

During HTML output, \include{<filename>} causes the following to occur:

1. lwarp creates <filename>_html_inc.tex whose contents are:

\input <filename>.tex

2. <filename>_html_inc.tex is then \included instead of <filename>.tex.

3. <filename>_html_inc.aux is automatically generated and used by L^AT_EX.

for HTML output: 1230 \begin{warpHTML}

\@include {\<filename>} Modified to load _html_inc files.

(Below, \clearpage caused missing text, and was changed to \newpage.)

```

1231 \def\@include#1 {%
1232 \immediate\openout\LWR@quickfile #1_html_inc.tex% lwarp

1279 \loop\unless\ifeof\LWR@copyinfile
1280   \LWR@traceinfo{\LWR@copyfile: one line}
1281   \read\LWR@copyinfile to\LWR@fileline % Read one line and store it into \LWR@fileline
1282 %   \LWR@fileline\par % print the content into the pdf
1283 % print the content:
1284   \immediate\write\LWR@copyoutfile{\unexpanded\expandafter{\LWR@fileline}}%
1285 \repeat
1286 \immediate\closeout\LWR@copyoutfile
1287 \LWR@traceinfo{\LWR@copyfile: done}
1288 \endgroup
1289 }

1290 \end{warpHTML}

```

35 Debugging messages

HTML comments To have the HTML output include additional HTML comments, such as which `<div>` is closing, use

```
\booltrue{HTMLDebugComments}
```

debugging information To have debug information written to the log, use

```
\tracingl warp
```

for HTML & PRINT: 1291 \begin{warpall}

Bool LWR@tracingl warp True if tracing is turned on.

```
1292 \newbool{LWR@tracingl warp}
```

\tracingl warp Turns on the debug tracing messages.

```
1293 \newcommand{\tracingl warp}{\booltrue{LWR@tracingl warp}}
```

\LWR@traceinfo {\text} If tracing is turned on, writes the text to the .log file.

```
1294 \newcommand{\LWR@traceinfo}[1]{%
1295 \ifbool{LWR@tracingl warp}{%
1296 {%
1297     \typeout{*** lwarp: #1}%
1298 }%
1299 {}}%
1300 }
```

Bool HTMLDebugComments Add comments in HTML about closing `<div>`s, sections, etc.

Default: false

```
1301 \newbool{HTMLDebugComments}
1302 \boolfalse{HTMLDebugComments}
```

If \tracingl warp, show where preamble hooks occur:

```
1303 \AfterEndPreamble{
1304 \LWR@traceinfo{AfterEndPreamble}
1305 }
1306
1307 \AtBeginDocument{
1308 \LWR@traceinfo{AtBeginDocument}
1309 }

1310 \end{warpall}
```

36 Defining print and HTML versions of macros and environments

The following refers to defining objects inside l warp, and is not for the user's document.

Many macros and environments must be provided as both print and HTML versions.

While generating the print version of a document, the original macros as defined by L^AT_EX and its packages are used as-is.

While generating the HTML version of a document, the original macro or environment is redefined to call a new HTML version or a copy of the original print version. The new HTML versions of macros and environments are used most of the time. Copies of the print versions are used inside a `lateximage` environment, which draws and remembers an image of the printed output, and also several other places. The copies of the print versions may also be used by the HTML versions, such as when the HTML version merely encloses the print version inside HTML tags.

The general structure for providing print and HTML versions of a macro or environment is as follows:

For a preexisting macro, not defined with xparse: An HTML version is provided with a special name, inside a `warpHTML` environment, then `\LWR@formatted` is used to redefine and patch various macros:

```
\begin{warpHTML}
\newcommand{\LWR@HTML@name}{...}% may also use xparse

\LWR@formatted{name}
\end{warpHTML}
```

`\LWR@formatted{name}` copies the original print version, then redefines `\name` to use either the print or HTML version depending on which mode l warp is using. xparse may be used to define the new HTML version, even if the original did not use xparse.

For a preexisting environment, not defined with xparse: The process is similar. Note the use of `\LWR@formattedenv` instead of `\LWR@formatted`.

```
\begin{warpHTML}
\newenvironment{\LWR@HTML@name}{...}% may also use xparse

\LWR@formattedenv{name}
\end{warpHTML}
```

If the original used xparse: A copy must be made using a new name:

```
\begin{warpHTML}
\NewDocumentCommand{\LWR@print@name}{...}{...}% copy the original
```

```
\NewDocumentCommand{\LWR@HTML@name}{...}{...}%
\end{warpHTML}
```

Similar for an environment, using \LWR@formattedenv. (\LWR@formatted and \LWR@formattedenv use \LetLtxMacro to copy the original print definition, which may not work with macros and environments created by xparse, so the print version must be manually recreated in the lwarp source.)

For a new macro or environment, not using xparse for the print version:

```
\begin{warpall}
\newcommand{\name}{...}% NOT xparse!
\end{warpall}

\begin{warpHTML}
\newcommand{\LWR@HTML@name}{...}% may use xparse for HTML

\LWR@formatted{\name}
\end{warpHTML}
```

Similar for an environment. The plain \name or environment name is used for the printed version, and is placed inside warpall. xparse may be used for the \LWR@HTML@<name> version.

For a new macro or environment, using xparse: It is possible to use xparse for an entirely new macro or environment by defining the \LWR@print@<name> version with xparse, along with \name defined without xparse to refer directly to the \LWR@print version:

```
\begin{warpall}
\NewDocumentCommand{\LWR@print@name}{...}{...}%
\end{warpall}

% Simply a call to \LWR@print@name:
\newcommand{\name}{\LWR@print@name}% -or-
\newenvironment{name}{\LWR@print@name}{\endLWR@print@name}
\end{warpall}

\begin{warpHTML}
\NewDocumentCommand{\LWR@HTML@name}{...}{...}%
\end{warpHTML}

\LWR@formatted{\name}% -or-
\LWR@formattedenv{\name}
\end{warpHTML}
```

In general, \LWR@formatted or \LWR@formattedenv are placed inside a warpHTML environment, and while producing an HTML document they do the following:

- Macros are modified:
 1. The pre-existing print version `\name` is saved as `\LWR@print@<name>`, unless `\LWR@print@<name>` is already defined.
 2. The original `\name` is redefined to call either the print or HTML version depending on which format is in use at the moment, as set by `\LWR@formatting`, which is defined as either “print” or “HTML”.
- When `lwarp` is producing a print document, the original definitions are used, as well as any new definitions defined in `warpall` above.
- When `lwarp` is generating HTML output, `\LWR@formatting` is set to “HTML”, and `\name` is directed to `\LWR@HTML@<name>`.
- When `lwarp` is generating HTML output but enters a `lateximage` environment, or for some other reason needs to draw images using the original print definitions, `\LWR@formatting` is changed to “print” and `\name` is then redirected to `\LWR@print@<name>`, which was the original `\name`.

Since arguments are not handled by the new `\name`, any star and other arguments are processed by the print or HTML version.

Expandable versions are also provided as well. These usually are necessary for anything which could appear inside a `tabular`, without which a “Misplaced `\omit`” error may occur.

```
\LWR@expandableformatted
\LWR@expandableformattedenv
```

(Older versions of `lwarp` used `\LetLtxMacro` for everything, but this could fail when using macros defined by `xparse`. This older system is still in use for many definitions.)

for HTML output: 1311 `\begin{warpHTML}`

`\LWR@formatting` Remembers if selected print/HTML formatting.

Used while `\LWR@restoreorigformatting`, such as in an `lateximage`. May be set to either “print” or “HTML”.

1312 `\newcommand*{\LWR@formatting}{HTML}`

`\LWR@formatted {<macroname>}` No backslash in the macro name.

If not yet defined, defines `\LWR@print@<name>` as the original print-mode `\<name>`. Also redefines `\<name>` to use `\LWR@<format>@<name>`, where `<format>` is set by `\LWR@formatting`, and is print or HTML.

```
1313 \newcommand*{\LWR@formatted}[1]{%
1314   \ifcsundef{\LWR@print@#1}{%
1315     \expandafter\LetLtxMacro\csname LWR@print@#1\expandafter\endcsname%
1316     \csname#1\endcsname%
1317   }{%
1318   \ifcsundef{\#1}{%
```

```

1319      \expandafter\newrobustcmd\csname #1\endcsname{%
1320          \@nameuse{LWR@\LWR@formatting @#1}%
1321      }%
1322  }{%
1323      \expandafter\renewrobustcmd\csname #1\endcsname{%
1324          \@nameuse{LWR@\LWR@formatting @#1}%
1325      }%
1326  }%
1327 }

```

\LWR@expandableformatted {*macroname*} No backslash in the macro name.

An expandable version of \LWR@formatted.

```

1328 \newcommand*{\LWR@expandableformatted}[1]{%
1329     \ifcsundef{\LWR@print@#1}{%
1330         \expandafter\LetLtxMacro\csname LWR@print@#1\expandafter\endcsname{%
1331             \csname#1\endcsname}%
1332     }{%
1333     \ifcsundef{#1}{%
1334         \expandafter\newcommand\csname #1\endcsname{%
1335             \@nameuse{LWR@\LWR@formatting @#1}%
1336         }%
1337     }{%
1338         \expandafter\renewcommand\csname #1\endcsname{%
1339             \@nameuse{LWR@\LWR@formatting @#1}%
1340         }%
1341     }%
1342 }

```

\LWR@formattedenv {*environmentname*}

If not yet defined, defines the environment LWR@print@<name> as the original print-mode <name>. Also redefines the environment <name> to use environment LWR@<format>@<name>, where <format> is set by \LWR@formatting, and is print or HTML.

```

1343 \newcommand*{\LWR@formattedenv}[1]{%
1344     \ifcsundef{\LWR@print@#1}{%
1345         \expandafter\LetLtxMacro\csname LWR@print@#1\expandafter\endcsname{%
1346             \csname#1\endcsname}%
1347         \csletcs{endLWR@print@#1}{end#1}%
1348     }{%
1349         \DeclareDocumentEnvironment{#1}{}{%
1350             {%
1351                 \@nameuse{LWR@\LWR@formatting @#1}%
1352             }%
1353             {%
1354                 \@nameuse{endLWR@\LWR@formatting @#1}%
1355             }%
1356 }

```

\LWR@expandableformattedenv {*environmentname*}

An expandable version of LWR@formattedeenv.

```

1357 \newcommand*{\LWR@expandableformattedeenv}[1]{%
1358     \ifcsundef{LWR@print@#1}{%
1359         \expandafter\LetLtxMacro\csname LWR@print@#1\expandafter\endcsname%
1360             \csname#1\endcsname%
1361         \csletcs{endLWR@print@#1}{end#1}%
1362     }{}%
1363     \DeclareExpandableDocumentEnvironment{#1}{}%
1364     {%
1365         \@nameuse{LWR@\LWR@formatting @#1}%
1366     }%
1367     {%
1368         \@nameuse{endLWR@\LWR@formatting @#1}%
1369     }%
1370 }

1371 \end{warpHTML}

```

37 HTML-conversion output modifications

These booleans modify the HTML output in various ways to improve conversion to EPUB or word processor imports.

for HTML & PRINT: 1372 \begin{warpall}

37.1 User-level controls

Bool FormatEPUB Changes HTML output for easy EPUB conversion via an external program. Removes per-file headers, footers, and nav. Adds footnotes per chapter/section.
Default: false

```

1373 \newbool{FormatEPUB}
1374 \boolfalse{FormatEPUB}

```

Bool FormatWP Changes HTML output for easier conversion by a word processor. Removes headers and nav, prints footnotes per section, and also forces single-file output and turns off HTML debug comments.
Default: false

```

1375 \newbool{FormatWP}
1376 \boolfalse{FormatWP}

```

Bool WPMarkFloats Adds
Default: false

```

        === begin table ===
        ...
        === end ===

```

or

```

        === begin figure ===
        ...
        === end ===

```

around floats while formatting for word processors. This helps identify boundaries of floats to be manually converted to word-processor frames and captions.¹⁷

```
1377 \newbool{WPMarkFloats}
1378 \boolfalse{WPMarkFloats}
```

Bool WPMarkMinipages Adds

Default: false

```
==== begin minipage ====
...
==== end minipage ===
```

around minipages while formatting for word processors. This helps identify boundaries of minipages to be manually converted to word-processor frames.

```
1379 \newbool{WPMarkMinipages}
1380 \boolfalse{WPMarkMinipages}
```

Bool WPMarkTOC While formatting for word processors, adds

Default: true

```
==== table of contents ===
```

where the Table of Contents would have been. This helps identify where to insert the actual TOC.

If set false, the actual TOC is printed instead.

```
1381 \newbool{WPMarkTOC}
1382 \booltrue{WPMarkTOC}
```

Bool WPMarkLOFT While formatting for word processors, adds

Default: false

```
==== list of figures === and/or
==== list of tables ===
```

where each of these lists would have been. This helps identify where to insert the actual lists.

If set false, the actual lists are printed instead.

```
1383 \newbool{WPMarkLOFT}
1384 \boolfalse{WPMarkLOFT}
```

Bool WPMarkMath While formatting for word processors, prints math as L^AT_EX code instead of creating SVG images or MATHJAX. This is useful for cut/paste into the *LibreOffice Writer TeXMaths* extension.

```
1385 \newbool{WPMarkMath}
1386 \boolfalse{WPMarkMath}
```

Bool WPTitleHeading While formatting for word processors, true sets the document title to <h1>, which

¹⁷Perhaps some day word processors will have HTML import options for identifying <figure> and caption tags for figures and tables.

is expected for HTML documents, but also causes the lower-level section headings to start at **Heading 2** when imported into LIBREOFFICE. Set to false to cause the title to be plain text, and the section headings to begin at **Heading 1**.

See table 8 on page 175.

```
1387 \newbool{WPTitleHeading}
1388 \boolfalse{WPTitleHeading}

1389 \end{warpall}
```

37.2 Heading adjustments

If formatting the HTML for a word processor, adjust heading levels.

If WPTitleHeading is true, adjust so that part is **Heading 1**.

If WPTitleHeading is false, use <h1> for the title, and set part to **Heading 2**.

for HTML output: 1390 \begin{warpHTML}

```
1391 \AtBeginDocument{
1392 \ifbool{FormatWP}{
1393 \@ifundefined{chapter}{

1394 \ifbool{WPTitleHeading}{% part and section starting at h2
1395 \renewcommand*\{\LWR@tagtitle\}{h1}
1396 \renewcommand*\{\LWR@tagtitleend\}{/h1}
1397 \renewcommand*\{\LWR@tagpart\}{h2}
1398 \renewcommand*\{\LWR@tagpartend\}{/h2}
1399 \renewcommand*\{\LWR@tagsection\}{h3}
1400 \renewcommand*\{\LWR@tagsectionend\}{/h3}
1401 \renewcommand*\{\LWR@tagsubsection\}{h4}
1402 \renewcommand*\{\LWR@tagsubsectionend\}{/h4}
1403 \renewcommand*\{\LWR@tagsubsubsection\}{h5}
1404 \renewcommand*\{\LWR@tagsubsubsectionend\}{/h5}
1405 \renewcommand*\{\LWR@tagparagraph\}{h6}
1406 \renewcommand*\{\LWR@tagparagraphend\}{/h6}
1407 \renewcommand*\{\LWR@tag subparagraph\}{span class="subparagraph"}
1408 \renewcommand*\{\LWR@tag subparagraphend\}{/span}
1409 }% WPTitleHeading
1410 {% not WPTitleHeading, part and section starting at h1
1411 \renewcommand*\{\LWR@tagtitle\}{div class="title"}
1412 \renewcommand*\{\LWR@tagtitleend\}{/div}
1413 \renewcommand*\{\LWR@tagpart\}{h1}
1414 \renewcommand*\{\LWR@tagpartend\}{/h1}
1415 \renewcommand*\{\LWR@tagsection\}{h2}
1416 \renewcommand*\{\LWR@tagsectionend\}{/h2}
1417 \renewcommand*\{\LWR@tagsubsection\}{h3}
1418 \renewcommand*\{\LWR@tagsubsectionend\}{/h3}
1419 \renewcommand*\{\LWR@tagsubsubsection\}{h4}
1420 \renewcommand*\{\LWR@tagsubsubsectionend\}{/h4}
1421 \renewcommand*\{\LWR@tagparagraph\}{h5}
1422 \renewcommand*\{\LWR@tagparagraphend\}{/h5}
```

```

1423 \renewcommand*\{\LWR@tagsubparagraph\}{h6}
1424 \renewcommand*\{\LWR@tagsubparagraphend\}{/h6}

}
1529 }
1530 }

1531 \end{warpHTML}

```

39 Accents

Native L^AT_EX accents such as \" will work, but many more kinds of accents are available when using Unicode-aware X^EL^AT_EX and LuaL^AT_EX.

for HTML output: 1532 \begin{warpHTML}

Without \AtBeginDocument, \t was being re-defined somewhere.

```
1533 \AtBeginDocument{
```

The following are restored for print when inside a `lateximage`.

For Unicode engines, only \t needs to be redefined:

```
1534 \LetLtxMacro{\LWR@origt}{\t}
```

For pdfL^AT_EX, additional work is required:

```

1535 \ifPDFTeX% pdflatex or dvi latex
1536 \LetLtxMacro{\LWR@origequalaccent}{=}
1537 \LetLtxMacro{\LWR@origdotaccent}{\cdot}
1538 \LetLtxMacro{\LWR@origu}{\u}
1539 \LetLtxMacro{\LWR@origv}{\v}
1540 \LetLtxMacro{\LWR@origc}{\c}
1541 \LetLtxMacro{\LWR@origd}{\d}
1542 \LetLtxMacro{\LWR@origb}{\b}

```

The HTML redefinitions follow.

For pdfL^AT_EX, Unicode diacritical marks are used:

```

1543 \renewcommand*{\=}[1]{\#1\HTMLunicode{0305}}
1544 \renewcommand*{\.\!}[1]{\#1\HTMLunicode{0307}}

```

```

1545 \renewcommand*\{u\}[1]{#1\HTMLunicode{0306}}
1546 \renewcommand*\{v\}[1]{#1\HTMLunicode{030C}}
1547 \renewcommand*\{c\}[1]{#1\HTMLunicode{0327}}
1548 \renewcommand*\{d\}[1]{#1\HTMLunicode{0323}}
1549 \renewcommand*\{b\}[1]{#1\HTMLunicode{0331}}
1550 \fi

```

For all engines, a Unicode diacritical tie is used:

```

1551 \def\LWR@t#1#2{\#1\HTMLunicode{0361}#2}
1552 \renewcommand*\{t\}[1]{\LWR@t#1}

```

\LWR@restoreorigaccents Called from \restoreoriginalformatting when a `lateXimage` is begun.

```

1553 \ifPDFTeX% pdflatex or dvi latex
1554 \newcommand*\{LWR@restoreorigaccents}{%

40 Configuration files

40.1 Decide whether to generate configuration files

Configuration files are only written if processing the print version of the document, and not processing a `pstool` image. `pstool` uses an additional compile for each image using the original document's preamble, which includes `lwarp`, so the `lwarp` configuration files are turned off if `-pstool` is part of the `\jobname`.

Default to no configuration files:

```
1571 \excludecomment{LWRwriteconf}
```

Generate configuration files if print mode and not `-pstool`:

for PRINT output:

```

1572 \begin{warpprint}
1573 \fullexpandarg%
1574 \IfSubStr*{\jobname}{-pstool}
1575 {
1576     \PackageInfo{lwarp}{%
1577         Jobname with -pstool is found.\MessageBreak
1578         Not generating lwarp configuration files,%
1579     }
1580 }
1581 {
1582     \PackageInfo{lwarp}{Generating lwarp configuration files,}%
1583     \includecomment{LWRwriteconf}
1584 }
1585 \end{warpprint}

```

40.2 <project>.html.tex

File *_html.tex Used to allow an HTML version of the document to exist alongside the print version.

Config file:

```

1586 \begin{LWRwriteconf}
1587 \immediate\openout\LWR@quickfile=\jobname_html.tex
1588 \immediate\write\LWR@quickfile{%
1589 \detokenize{\PassOptionsToPackage}{%
1590 {warpHTML,BaseJobname=\jobname}{lwarp}}%
1591 }
1592 \immediate\write\LWR@quickfile{%
1593 \detokenize{\input}{\string{\jobname.tex}\string{}}%
1594 }
1595 \immediate\closeout\LWR@quickfile
1596 \end{LWRwriteconf}

```

40.3 *lwarpmk* configuration files

Config file:

```
1597 \begin{LWRwriteconf}
```

\LWR@lwarpconfversion The version number of the configuration file, allowing *lwarpmk* to detect an obsolete configuration file format. Incremented by one each time the configuration file format changes. (This is NOT the same as the *lwarp* version number.)

```
1598 \newcommand*{\LWR@lwarpconfversion}{2}% also in lwarpmk.lua
```

40.3.1 Helper macros

\LWR@shellescapecmd The LaTeX compile option for shell escape, if used.

```

1599 \ifshellescape
1600     \def\LWR@shellescapecmd{--shell-escape }
1601 \else
1602     \def\LWR@shellescapecmd{}
1603 \fi

```

```
\LWR@compilecmd {<engine>} {<suffix>}
```

Used to form the basic compilation command for a document, adding the optional shell escape.

Engine is *pdflatex*, etc. Suffix is empty or _*html*

```
1604 \newcommand*{\LWR@compilecmd}[2]{%
1605     #1 \LWR@shellescapecmd \jobname#2%
1606 }
```

```
\LWR@addcompilecmd {<cmd>} {<suffix>}
```

Adds to the compilation command.

Cmd is *dvipdfmx*, etc. Suffix is empty or _*html*

```
1607 \newcommand*{\LWR@addcompilecmd}[2]{%
1608     \LWRopseq
1609     #1 \jobname#2%
1610 }
```

```
\LWR@unknownengine Error message if not sure which LATEX engine is being used.
```

```
1611 \newcommand*{\LWR@unknownengine}{%
1612     \PackageError{l warp}%
1613     {Unknown LATEX engine.}%
1614     {L warp only knows about pdflatex, dvi latex, xelatex, lualatex, and upLateX.}%
1615 }
```

```
\LWR@latexmkvar {<varname>} {<value>}
```

Adds a *latexmk* variable assignment.

```
1616 \newcommand*{\LWR@latexmkvar}[2]{%
1617     -e
1618     \LWRopquote%
1619     \LWRdollar #1=q/#2/%
1620     \LWRopquote
1621 }
```

```
\LWR@latexmkcmd {<latexmk options>}
```

Sets a call to *latexmk* with the given options, possibly adding --shell-escape, and also adding the indexing program.

```
1622 \newcommand*{\LWR@latexmkcmd}[1]{%
1623     latexmk \space \LWR@shellescapecmd \space #1 \space
1624     -recorder \space
1625     \LWR@latexmkvar{makeindex}{\LWR@LatexmkIndexCmd}
1626 }
```

```
\LWR@latexmkdvipdfm {<dvipdfm or dvipdfmx>}
```

Adds the options settings for *dvipdfm* or *dvipdfmx*.

```

1627 \newcommand*{\LWR@Latexmkdvipdfm}[1]{%
1628     -pdfdvi \space
1629     \LWR@latexmkvar{dvipdf}{%
1630         #1
1631         \@percentchar 0
1632         -o \@percentchar D
1633         \@percentchar S%
1634     }
1635 }
```

\LWR@compileuplatex Sets compile options for up^LATEX with *ujarticle* or related classes.

```

1636 \newcommand*{\LWR@compileuplatex}{%
1637     \def\LWR@tempprintlatexcmd{%
1638         \LWR@compilecmd{uplatex}{}%
1639         \LWR@addcompilecmd{dvipdfmx}{}%
1640     }
1641     \def\LWR@tempHTMLlatexcmd{%
1642         \LWR@compilecmd{uplatex}{_html}%
1643         \LWR@addcompilecmd{dvipdfmx}{_html}%
1644     }
1645 }
```

\LWR@PrintLatexCmd If not set by the user, the following sets the command to use to compile the source to PDF form.

If using *latexmk*, a complicated string is created, eventually resulting in something such as:

For *xelatex* with --shell-escape:

```
[[ latexmk -xelatex --shell-escape -recorder
-e '$makeindex = q/makeindex -s lwarf.ist/' <jobname>.html]]
```

For *dvipdfmx*:

```
[[ latexmk -pdfdvi -e '$dvipdf=q/dvipdfmx %0 -o %D %S/'
-recorder
-e '$makeindex=q/makeindex -s lwarf.ist/' <jobname>.html]]
```

For the following, temporary values are computed, but the permanent values are only set if the originals were not assigned by the user.

```
1646 \ifbool{\LWR@Latexmk}{
```

For *latexmk* with *pdflatex* or *lualatex*:

```
1647 \ifpdf
```

For *latexmk* with *pdflatex*:

```
1648      \ifPDFTeX
1649          \def\LWR@latextcmd{\LWR@latexmkcmd{-pdf -dvi- -ps-}}
1650      \else
```

For *latexmk* with *lualatex*:

```
1651      \ifLuaTeX
1652          \def\LWR@latextcmd{\LWR@latexmkcmd{-lualatex}}
1653      \else
1654          \LWR@unknownengine
1655      \fi
1656  \fi
1657 \else% \ifpdf
```

For *latexmk* with *xelatex* or *DVI latex*:

```
1658      \ifXeTeX
```

For *latexmk* with *xelatex*:

```
1659      \def\LWR@latextcmd{\LWR@latexmkcmd{-xelatex}}
1660  \else% \ifXeTeX
```

For *latexmk* with *DVI latex*:

```
1661      \ifbool{\LWR@dvipdfm}{%
1662          \def\LWR@latextcmd{%
1663              \LWR@latexmkcmd{%
1664                  \LWR@latexmkdvipdfm{dvipdfm}}%
1665              }%
1666          }%
1667      }{%
1668          \ifbool{\LWR@dvipdfmx}{%
1669              \def\LWR@latextcmd{%
1670                  \LWR@latexmkcmd{%
1671                      \LWR@latexmkdvipdfm{dvipdfmx}}%
1672                  }%
1673          }{%
1674              }{%
1675                  \def\LWR@latextcmd{\LWR@latexmkcmd{-pdfps}}%
1676              }%
1677          }%
1678      \fi
1679  \fi% \ifpdf
```

The final assignment if *latexmk*:

```
1680  \def\LWR@tempprintlatextcmd{\LWR@latextcmd \space \jobname}
1681  \def\LWR@tempHTMLlatextcmd{\LWR@latextcmd \space \jobname_html}
1682 }% latexmk
```

Without *latexmk*, the compiling command is simply the compiler name and the optional shell escape:

```
1683 {%
1684     \ifpdf
```

For *pdflatex* or *lualatex*:

```
1685     \ifPDFTeX
```

For *pdflatex*:

```
1686         \def\LWR@tempprintlatexcmd{\LWR@compilecmd{pdflatex}{}}%
1687         \def\LWR@tempHTMLlatexcmd{\LWR@compilecmd{pdflatex}{_html}}%
1688     \else
1689         \ifLuaTeX
```

For *lualatex*:

```
1690         \def\LWR@tempprintlatexcmd{\LWR@compilecmd{lualatex}{}}%
1691         \def\LWR@tempHTMLlatexcmd{\LWR@compilecmd{lualatex}{_html}}%
1692     \else
1693         \LWR@unknownengine
1694     \fi
1695     \fi
1696 \else% \ifpdf
```

For dvi *latex* or *xelatex*:

```
1697     \ifXeTeX
```

For *xelatex*:

```
1698         \def\LWR@tempprintlatexcmd{\LWR@compilecmd{xelatex}{}}%
1699         \def\LWR@tempHTMLlatexcmd{\LWR@compilecmd{xelatex}{_html}}%
1700     \else
```

For dvi *latex*. Default to *dvips*, unless told to use *dvipdfm* or *dvipdfmx*:

```
1701     \ifbool{\LWR@dvipdfm}{%
```

For dvi *latex* with *dvipdfm*:

```
1702         \def\LWR@tempprintlatexcmd{%
1703             \LWR@compilecmd{latex}{}%
1704             \LWR@addcompilecmd{dvipdfm}{}%
1705         }%
1706         \def\LWR@tempHTMLlatexcmd{%
1707             \LWR@compilecmd{latex}{_html}%
1708             \LWR@addcompilecmd{dvipdfm}{_html}%
1709         }%
1710     }%
1711     \ifbool{\LWR@dvipdfmx}{%
```

For DVI *latex* with *dvipdfmx*:

```

1712          \def\LWR@tempprintlatexcmd{%
1713              \LWR@compilecmd{latex}{}
1714              \LWR@addcompilecmd{dvipdfmx}{}
1715          }
1716          \def\LWR@tempHTMLlateXcmd{%
1717              \LWR@compilecmd{latex}{_html}
1718              \LWR@addcompilecmd{dvipdfmx}{_html}
1719          }
1720      }% dvips

```

For DVI *latex* with *dvips* and *ps2pdf*:

```

1721          \def\LWR@tempprintlatexcmd{%
1722              \LWR@compilecmd{latex}{}
1723              \LWR@addcompilecmd{dvips}{}
1724              \LWR@addcompilecmd{ps2pdf}{}.ps
1725          }
1726          \def\LWR@tempHTMLlateXcmd{%
1727              \LWR@compilecmd{latex}{_html}
1728              \LWR@addcompilecmd{dvips}{_html}
1729              \LWR@addcompilecmd{ps2pdf}{_html}.ps
1730          }
1731      }
1732      \fi% \ifXeTeX
1733      \fi% \ifpdf
1734  }% latexmk

```

For *ujarticle*, *utarticle*, and related, using up^LATE_X and *dvipdfmx*:

```

1736 \@ifclassloaded{ujarticle}{\LWR@compileuplateX}{}
1737 \@ifclassloaded{ujbook}{\LWR@compileuplateX}{}
1738 \@ifclassloaded{ujreport}{\LWR@compileuplateX}{}
1739 \@ifclassloaded{utarticle}{\LWR@compileuplateX}{}
1740 \@ifclassloaded{utbook}{\LWR@compileuplateX}{}
1741 \@ifclassloaded{utreport}{\LWR@compileuplateX}{}

```

Only make the setting permanent if the original was empty:

```

1742 \ifdefempty{\LWR@PrintLatexCmd}{%
1743     \def\LWR@PrintLatexCmd{\LWR@tempprintlatexcmd}
1744 }%
1745 \ifdefempty{\LWR@HTMLLateXCmd}{%
1746     \def\LWR@HTMLLateXCmd{\LWR@tempHTMLlateXcmd}
1747 }%
\noexpand\LWR@writeconf {\langle filename\rangle}

```

Common code for each of *lwarpmk.conf* and <project>.lwarpmkconf. Each entry is a variable name, the equal sign, and a quoted string inside [[and]], which are *lua*'s long quote characters, allowing the use of single and double quotes inside.

```

1748 \newcommand{\LWR@writeconf}[1]{%
1749 \ifcsdef{\LWR@quickfile}{}{\newwrite{\LWR@quickfile}}%
1750 \immediate\openout\LWR@quickfile=\#1%
1751 \immediate\write{\LWR@quickfile}{\conversion = [\[\LWR@lwarfconfversion]]}%
1752 \ifbool{usingOSWindows}{%

1768 \immediate\write{\LWR@quickfile}{\glossarycmd = [[\LWR@GlossaryCmd]]}%
1769 \immediate\write{\LWR@quickfile}{\pdftotextenc = [[\LWR@pdftotextEnc]]}%
1770 \immediate\closeout{\LWR@quickfile}%
1771 }%
1772

1773 \end{LWRwriteconf}

```

40.3.2 lwarpmk.conf

File lwarpmk.conf lwarpmk.conf is automatically (re-)created by the lwarf package when executing `pdflatex <project.tex>`, or similar for *xelatex* or *lualatex*, in print-document generation mode, which is the default unless the `warpHTML` option is given. lwarpmk.conf is then used by the utility *lwarpmk*.

Config file:

```

1774 \begin{LWRwriteconf}%
1775 %
1776 \AtBeginDocument{\LWR@writeconf{lwarpmk.conf}}%
1777 %
1778 \end{LWRwriteconf}

```

40.3.3 <project>.lwarpmkconf

File project.lwarpmkconf A project-specific configuration file for *lwarpmk*.

The `makeindex` and `xindy` options have already been handled for `lwarf.conf`.

Config file:

```

1779 \begin{LWRwriteconf}%
1780 %
1781 \AtBeginDocument{\LWR@writeconf{\jobname.lwarpmkconf}}%
1782 %
1783 \end{LWRwriteconf}

```

40.4 lwarp.css

File lwarp.css This is the base css layer used by lwarp.

This must be present both when compiling the project and also when distributing the HTML files.

Config file:

```
1784 \begin{LWRwriteconf}
1785 \begin{filecontents*}[overwrite]{lwarp.css}
1786 /*
1787   CSS stylesheet for the LaTeX lwarp package

```

40.7 sample_project.css

File sample_project.css The project-specific css file. Use with \CSSFilename.

If used, this must be present both when compiling the project and also when distributing the HTML files.

```
Config file: 3842 \begin{LWRwriteconf}
3843 \begin{filecontents*}[overwrite]{sample_project.css}
3844 /* ( --- Start of project.css --- ) */
3845 /* ( --- A sample project-specific CSS file for lwarp --- ) */
3846
3847 /* Uncomment one of the following: */
3848 @import url("lwarp.css") ;
3849 /* @import url("lwarp_formal.css") ; */
3850 /* @import url("lwarp_sagebrush.css") ; */
3851
3852 /* Project-specific CSS setting follow here. */
3853 /* . . . */
3854
3855 /* ( --- End of project.css --- ) */
3856 \end{filecontents*}
3857 % \end{Verbatim} for syntax highlighting
3858 \end{LWRwriteconf}
```

40.8 lwarp.ist

File lwarp.ist Used to modify the index for lwarp.

This must be present when compiling the project, but does not need to be present when distributing the resulting HTML files.

The page_compositor line is for memoir's \specialindex.

```
Config file: 3859 \begin{LWRwriteconf}
3860 \begin{filecontents*}[overwrite]{lwarp.ist}
3861 preamble
3862 "\\begin{theindex}"
3863   \\providecommand*\\lettergroupDefault[1]{}%

40.10 lwarf_one_limage.cmd

File lwarf_one_limage.cmd Used by lwarf to help make lateximages when using WINDOWS.

This must be present when compiling the project, but does not need to be present when distributing the resulting HTML files.

The arguments are each of the three fields from <project>-images.txt, and also the base name of the source file.

MiKTeX does not allow file lwarf_one_limage.cmd to be created directly by *lwarpmk*, so lwarf_one_limage.txt is created instead, then copied to lwarf_one_limage.cmd by *lwarpmk*. This occurs each time *lwarpmk* used to create lateximages.

Config file: 3908 \begin{LWRwriteconf}
 3909 \immediate\openout\LWR@quickfile=lwarf_one_limage.txt

```

3910 \immediate\write\LWR@quickfile{%

3930 \end{LWRwriteconf}

```

40.11 lwarp_mathjax.txt

File `lwarp_mathjax.txt` The default MathJax script used by `lwarp` when using MATHJAX. A recent version of MathJax is used, as served by the recommended repository. Adjustments are made to allow LATEX to control the equation tags.

`\MathJaxFilename` determines which script file is copied into the HTML pages, and defaults to `lwarp_mathjax.txt`. The script files must be present when compiling the project, but do not need to be present when distributing the resulting HTML files.

custom script To generate a custom script, such as to use a local repository, copy `lwarp_mathjax.txt` to a new file, make changes while keeping `lwarp`'s adjustments for equation numbering, and use `\MathJaxFilename` to select new filename.

Config file:

40.12 lwarpmk.lua — lwarpmk option

Opt	<code>lwarpmk</code>	Creates a local copy of <i>lwarpmk</i> .
Prog	<code>lwarpmk</code>	Command-line utility to process <i>lwarf</i> files and images.
parallel processing		lateximages and svg math images are generated using multiple processes in parallel. For UNIX and LINUX, every 32 images the wait command is issued to wait for the previous batch of images to finish processing before starting a new batch. For WINDOWS, every 32 images one task is dispatched with

START /B /WAIT /BELOWNORMAL

which causes the operating system to wait until this lesser-priority tasks finishes, hopefully also waiting for the normal priority tasks which were already in progress to also complete. Afterwards, the next batch of images is started.

The following is only generated if the `lwarpmk` option was given to `lwarf`.

```

4028 \begin{LWR@createlwarpmk}

41 Stacks

for HTML output: 4985 \begin{warpHTML}

Stacks are used to remember how to close sections and list items. Before a new section is started, previously nested sections and items must be closed out (un-nested) in proper order. Note that starting a new section may close several levels of previously nested items at the same time. For example, starting a new \section would close any currently open subsection, subsubsection, and paragraph. General environments are not nested on the stack since they have their own close mechanism. List environments are nested, and items inside those environments are nested one level deeper still. List environments may be nested inside other list environments, and list items are nested inside list environments as well. Thus, the stack may have items which are not necessarily in order, since a description may contain an enumerate, for example. Depths to be recorded in \LWR@closedepthone, etc.

41.1 Assigning depths

initial depths for empty stack entries:

```
4986 \newcommand*{\LWR@depthnone}{-5}
```

All sectioning depths are deeper than \LWR@depthfinished:

```

4987 \newcommand*{\LWR@depthfinished}{-4}
4988 \newcommand*{\LWR@depthbook}{-2}
4989 \newcommand*{\LWR@depthpart}{-1}
4990 \newcommand*{\LWR@depthchapter}{0}
4991 \newcommand*{\LWR@depthsection}{1}
4992 \newcommand*{\LWR@depthsubsection}{2}
4993 \newcommand*{\LWR@depthsubsubsection}{3}
4994 \newcommand*{\LWR@depthparagraph}{4}
4995 \newcommand*{\LWR@depthsubparagraph}{5}

```

Used by \itemize, \enumerate, \description:

4996 \newcommand*{\LWR@depthlist}{6}

Used by \item:

4997 \newcommand*{\LWR@depthlistitem}{7}
4998 \let\LWR@depthdescitem\LWR@depthlistitem

41.2 Closing actions

A stack to record the action to take to close each nesting level: Add more levels of stack if necessary for a very deeply nested document, adding to \pushclose and \popclose as well.

4999 \newcommand*{\LWR@closeone}{}% top of the stack
5000 \newcommand*{\LWR@closetwo}{}
5001 \newcommand*{\LWR@closethree}{}
5002 \newcommand*{\LWR@closefour}{}
5003 \newcommand*{\LWR@closefive}{}
5004 \newcommand*{\LWR@closesix}{}
5005 \newcommand*{\LWR@closeseven}{}
5006 \newcommand*{\LWR@closeeight}{}
5007 \newcommand*{\LWR@closenine}{}
5008 \newcommand*{\LWR@closeten}{}
5009 \newcommand*{\LWR@closeeleven}{}
5010 \newcommand*{\LWR@closetwelve}{}
5011 \newcommand*{\LWR@closedepthonne}{}% top of the stack
5012 \newcommand*{\LWR@closedephtwo}{}{\LWR@depthnone}
5013 \newcommand*{\LWR@closedepththree}{}{\LWR@depthnone}
5014 \newcommand*{\LWR@closedepthfour}{}{\LWR@depthnone}
5015 \newcommand*{\LWR@closedepthfive}{}{\LWR@depthnone}

41.3 Closing depths

A stack to record the depth of each level:

Note that nested L^AT_EX structures may push depths which are non-sequential.

Ex:

```
\begin{itemize}
  \item{A}
    \begin{description}
      \item{B}
    \end{description}
  \end{itemize}
```

5011 \newcommand*{\LWR@closedepthonne}{}% top of the stack
5012 \newcommand*{\LWR@closedephtwo}{}{\LWR@depthnone}
5013 \newcommand*{\LWR@closedepththree}{}{\LWR@depthnone}
5014 \newcommand*{\LWR@closedepthfour}{}{\LWR@depthnone}
5015 \newcommand*{\LWR@closedepthfive}{}{\LWR@depthnone}

```

5016 \newcommand*{\LWR@closedepthsix}{\LWR@depthnone}
5017 \newcommand*{\LWR@closedepthseven}{\LWR@depthnone}
5018 \newcommand*{\LWR@closedeptheight}{\LWR@depthnone}
5019 \newcommand*{\LWR@closedepthnine}{\LWR@depthnone}
5020 \newcommand*{\LWR@closedepthten}{\LWR@depthnone}
5021 \newcommand*{\LWR@closedeptheleven}{\LWR@depthnone}
5022 \newcommand*{\LWR@closedepthtwelve}{\LWR@depthnone}

```

41.4 Pushing and popping the stack

\LWR@pushclose {*<sectiontype>*}

Pushes one return action and its L^AT_EX depth onto the stacks.

```

5023 \NewDocumentCommand{\LWR@pushclose}{m}
5024 {%
5025 \global\let\LWR@closetwelve\LWR@closeeleven%
5026 \global\let\LWR@closeeleven\LWR@closeten%

5075 \end{warpHTML}

```

42 Data arrays

These macros are similar to the `arrayjobx` package, except that `\LWR@setexparray`'s argument is expanded only once when assigned.

`name` has no backslash, `index` can be a number or a text name, and an empty `value` must be `\relax` instead of empty.

To assign an empty value:

```
\LWR@setexparray{name}{index}{}{}
```

for HTML output: 5076 `\begin{warpHTML}`

```
\LWR@setexparray {<name>} {<index>} {<contents>}
```

```

5077 \NewDocumentCommand{\LWR@setexparray}{m m m}{%
5078     \begingroup%
5079     \let\par\relax%
5080     \xdef\LWR@thisexparrayname{\#1\#2}%
5081     \ifstrempy{\#3}{}{%
5082         \csgdef{\LWR@thisexparrayname}{}%
5083         \csxdef{\LWR@thisexparrayname}{\#3}%
5084     }%
5085 }

```

```
\LWR@getexparray {<name>} {<index>}
```

```

5086 \newcommand*{\LWR@getexparray}[2]{%
5087     \nameuse{\#1\#2}%
5088 }

```

```
5089 \end{warpHTML}
```

43 Localizing catcodes

for HTML & PRINT: 5090 \begin{warpall}

⚠ Misplaced alignment tab character &

Place \StartDefiningTabulars and \StopDefiningTabulars before and after defining macros or environments which include the tabular & character in their definitions.

The catcode of & must be changed before the definitions begin, and must be restored afterwards. Doing so avoids the error

Misplaced alignment tab character &.

\StartDefiningTabulars Place before defining something with & in it.

```
5091 \newcommand{\StartDefiningTabulars}{%
5092 \LWR@traceinfo{StartDefiningTabulars}%
5093 \warpHTMLonly{\catcode`\&=\active}%
5094 }
```

\StopDefiningTabulars Place after defining something with & in it.

```
5095 \newcommand{\StopDefiningTabulars}{%
5096 \LWR@traceinfo{StopDefiningTabulars}%
5097 \warpHTMLonly{\catcode`\&=4}%
5098 }
```

Bool LWR@mathmacro True if currently defining math macros. Used to disable SVG math hashing and MathJax math contents while defining a macro using inline math. Begin a macro, it is not guaranteed that the contents are static, and so the image must be unique. The contents also almost certainly will not be parsed correctly by MathJax.

```
5099 \newbool{LWR@mathmacro}
5100 \boolfalse{LWR@mathmacro}
```

\StartDefiningMath Place before defining something with \$ in it.

```
5101 \newcommand{\StartDefiningMath}{%
5102 \LWR@traceinfo{StartDefiningMath}%
5103 \warpHTMLonly{\catcode`\$=\active}%
5104 }
```

\StopDefiningMath Place after defining something with \$ in it.

```
5105 \newcommand{\StopDefiningMath}{%
5106 \LWR@traceinfo{StopDefiningMath}%
5107 \warpHTMLonly{\catcode`\$=3}% math shift
5108 }
```

```
5109 \end{warpall}
```

44 Localizing dynamic math

Inline SVG math usually uses a hash of its contents to generate `\latexitimages` which are reusable for multiple instances with the same contents. If the contents may change for each use, such as depending on the current value of a counter, then `\inlinemathother` must be used before the inline math expression, and `\inlinemathnormal` must be used after.

For MathJax, the inline math expression is usually printed for MathJax to interpret. When marked as dynamic math, the following inline math expression will be displayed as an unhashed inline SVG image instead.

For existing code and packages, it may be possible to patch macros after they have been defined, using the `xpatch` package, which is pre-loaded by `lwarp`:

```
\xpatchcmd{\macro}
  {$math expression$}
  {\inlinemathother$math expression$\inlinemathnormal}
  {}
  {\typeout{Error patching macro.}}
```

for HTML & PRINT: 5110 `\begin{warpall}`

`Bool LWR@dynamicmath` True to mark inline math which is dynamic in nature, thus should not be hashed for reuse.
 Default: `false`

```
5111 \newbool{LWR@dynamicmath}
5112 \boolfalse{LWR@dynamicmath}
```

`\inlinemathother` Place before using `$... $` or `\(... \)` if the contents of the math are not static, depending on counters or dynamic macros.

```
5113 \newcommand{\inlinemathother}{%
5114 \LWR@traceinfo{inlinemathother}%
5115 \booltrue{LWR@dynamicmath}%
5116 }
```

`\inlinemathnormal` Place after using `$... $` or `\(... \)` with dynamic contents.

```
5117 \newcommand{\inlinemathnormal}{%
5118 \LWR@traceinfo{inlinemathnormal}%
5119 \boolfalse{LWR@dynamicmath}%
5120 }

5121 \end{warpall}
```

45 HTML entities

for HTML output: 5122 \begin{warpHTML}

 HTML Unicode entities:

5123 \let\LWR@origampersand\&

\HTMLentity {<entitytag>}

5124 \newcommand*{\HTMLentity}[1]{%
 5125 % \LWR@traceinfo{HTMLentity \detokenize{\#1}}%
 5126 \begingroup%
 5127 \LWR@FBcancel%
 5128 \LWR@origampersand#1;%
 5129 \endgroup%
 5130 % \LWR@traceinfo{HTMLentity done}%
 5131 }

\HTMLunicode {<hex_unicode>}

5132 \newcommand*{\HTMLunicode}[1]{\HTMLentity{\LWR@origpound{}x#1}}

\&

5133 \renewrobustcmd*{\&}{\HTMLentity{amp}}

\textless

5134 \let\LWR@origtextless\textless
 5135 \renewrobustcmd*{\textless}{\HTMLentity{lt}}

\textgreater

5136 \let\LWR@origtextgreater\textgreater
 5137 \renewrobustcmd*{\textgreater}{\HTMLentity{gt}}

5138 \end{warpHTML}

46 HTML filename generation

The filename of the homepage is set to \HomeHTMLFilename.html. The filenames of additional sections start with \HTMLFilename, to which is appended a section number or a simplified section name, depending on FileSectionNames.

for HTML & PRINT: 5139 \begin{warpall}

\BaseJobname The \jobname of the printed version, even if currently compiling the HTML version. I.e. this is the \jobname without _html appended. This is used to set \HomeHTMLFilename if the user did not provide one.

5140 \providecommand*\{\BaseJobname\}{\jobname}

\HTMLFilename The prefix for all generated HTML files other than the home page, defaulting to empty. See section 7.6.1.

5141 \providecommand*\{\HTMLFilename\}{}{}

\HomeHTMLFilename The filename of the home page, defaulting to the \BaseJobname. See section 7.6.1.

5142 \providecommand*\{\HomeHTMLFilename\}{\BaseJobname}

\SetHTMLFileName {<number>}

Sets the file number for the next file to be generated. 0 is the home page. Use just before the next sectioning command, and set it to one less than the desired number of the next section. May be used to generate numbered groups of nodes such as 100+ for one chapter, 200+ for another chapter, etc.

5143 \newcommand*\{\SetHTMLFileName\}[1]{%
5144 \setcounter{LWR@htmlfilename}{#1}%
5145 }

Bool FileSectionNames Selects how to create HTML file names.

Defaults to use section names in the filenames.

5146 \newbool{FileSectionNames}
5147 \booltrue{FileSectionNames}

5148 \end{warpall}

for HTML output: 5149 \begin{warpHTML}

Ctr LWR@htmlfilename Records the number of each HTML file as it is being created. Number 0 is the home page.

5150 \newcounter{LWR@htmlfilename}
5151 \setcounter{LWR@htmlfilename}{0}

\LWR@htmlsectionfilename {<htmlfilename or name>}

Prints the filename for a given section: \HTMLFilename{}filenumber/name.html

5152 \newcommand*\{\LWR@htmlsectionfilename\}[1]{%
5153 \LWR@traceinfo{\LWR@htmlsectionfilename A !\detokenize{#1}!}%

Section 0 or empty is given the home filename. The filename must be detokenized for underscores.

```

5154 \%LWR@traceinfo{about to assign temp}%
5155 \LWR@sanitize{#1}%
5156 \LWR@traceinfo{about to compare with ??}%
5157 \ifthenelse{\equal{\LWR@sanitized}{??}}{%
5158   {\LWR@traceinfo{found ??}}{%
5159     {\LWR@traceinfo{not found ??}}{%
5160 \LWR@traceinfo{about to compare with zero or empty}%
5161 \ifthenelse{%
5162   \equal{\LWR@sanitized}{0}}{%
5163   \OR \equal{\LWR@sanitized}{}}{%
5164   \OR \equal{\LWR@sanitized}{??}}{%
5165 }%
5166 {%
5167   \LWR@traceinfo{LWR@htmlsectionfilename B \HomeHTMLFilename.html}%
5168   \HomeHTMLFilename.html%
5169 }%

```

For a L^AT_EX section named “Index” or “index” without a prefix, create a filename with a leading underscore to avoid colliding with the HTML filename index.html:

```

5170 {%
5171   \LWR@traceinfo{LWR@htmlsectionfilename C \LWR@sanitized}%
5172   \ifthenelse{%
5173     \equal{\HTMLFilename}{} \AND
5174     \equal{\LWR@sanitized}{Index} \OR
5175     \equal{\LWR@sanitized}{index}}{%
5176   }%
5177   {%
5178     \LWR@traceinfo{Prefixing the index name with an underscore.}%
5179     \_\LWR@sanitized.html%
5180   }%

```

Otherwise, create a filename with the chosen prefix:

```

5181   {%
5182     \HTMLFilename\LWR@isolate{\LWR@sanitized}.html%
5183   }%
5184 }%
5185 \LWR@traceinfo{LWR@htmlsectionfilename Z}%
5186 }%

```

\LWR@htmlrefsectionfilename {<label>}

Prints the filename for the given label

```

5187 \newcommand*{\LWR@htmlrefsectionfilename}[1]{%
5188 \LWR@traceinfo{LWR@htmlrefsectionfilename: !\detokenize{#1}!}%

```

\LWR@nullfonts to allow math in a section name.

```

5189 \begingroup%
```

```

5190 \LWR@nullfonts%
5191 \LWR@htmlsectionfilename{\LWR@htmlfileref{\#1}}%
5192 \endgroup%
5193 \LWR@traceinfo{\LWR@htmlrefsectionfilename: done}%
5194 }

5195 \end{warpHTML}

```

47 Homepage link

for HTML & PRINT: 5196 \begin{warpall}

\linkhomename Holds the default name for the home link.

```

5197 \newcommand{\linkhomename}{Home}

5198 \end{warpall}

```

for HTML output: 5199 \begin{warpHTML}

\LinkHome May be used wherever you wish to place a link back to the homepage. The filename must be detokenized for underscores.

```

```
5220 \newcommand*\LWR@topnavigation{}{
5221 \LWR@htmlelementclassline{nav}{topnavigation}{\LinkHome}
5222 }
```

\LWR@botnavigation Creates a link to the homepage at the bottom of the page for use when the window is too narrow for the sidetoc.

```
5223 \newcommand*\LWR@botnavigation{}{
5224 \LWR@htmlelementclassline{nav}{botnavigation}{\LinkHome}
5225 }
```

```
5226 \end{warpHTML}
```

48 \LWRPrintStack diagnostic tool

 Diagnostics tool: Prints the L^AT_EX nesting depth values for the stack levels. \LWR@startpars is used before printing the stack, so that \LWRPrintStack may be called from anywhere in the normal text flow.

for HTML output: 5227 \begin{warpHTML}

\LWRPrintStack Prints the closeddepth stack.

```
5228 \newcommand*\LWR@subprintstack{}{
5229 \LWR@closedepthonel\ \LWR@closedepthtwoel\ \LWR@closedepththreeel\
5230 \LWR@closedepthfourel\ \LWR@closedepthfiveel\ \LWR@closedepthsixel\
5231 \LWR@closedepthsevenel\ \LWR@closedeptheightel\ \LWR@closedepthnineel\
5232 \LWR@closedephtenel\ \LWR@closedepthelevenel\ \LWR@closedepthtwelveel\
5233 }
5234
5235 \newcommand*\LWRPrintStack{}{
5236 \LWR@startpars
5237 \LWR@subprintstack
5238 }
```

```
5239 \end{warpHTML}
```

for PRINT output: 5240 \begin{warpprint}

```
5241 \newcommand*{\LWRPrintStack}{}  
5242 \end{warpprint}
```

49 Closing stack levels

for HTML output: 5243 \begin{warpHTML}

Close one nested level:

```
5244 \newcommand*{\LWR@closeoneprevious}{%  
5245  
5246 \LWR@closeone  
5247  
5248 \LWR@popclose  
5249 }
```

\LWR@closeprevious {*sectintype*} Close everything up to the given depth:

```
5250 \newcommand*{\LWR@closeprevious}[1]{  
5251 \LWR@traceinfo{  
5252     LWR@closeprevious to depth \csuse{\LWR@depth#1}, %  
5253     depths are \LWR@subprintstack%  
5254 }}
```

Close any pending paragraph:

```
5255 \LWR@stoppars%
```

Close anything nested deeper than the desired depth. First close anything deeper, then at most one of the same level.

```
5256 \whileboolexpr{test{\ifnumcomp{\LWR@closedepthone}>}{\csuse{\LWR@depth#1}}}}%  
5257 {  
5258     \LWR@traceinfo{LWR@closeprevious: closing out depth \LWR@closedepthone}%

5507 \newcommand*{\LWR@htmldivclassend}[1]{%
5508 \LWR@htmlelementclassend{div}{#1}%
5509 }

```

51.7 Single-line elements

A single-line element, without a paragraph tag for the line of text:

```

\LWR@htmlelementclassline {<element>} [<style>] {<class>} {<text>}

5510 \NewDocumentCommand{\LWR@htmlelementclassline}{m o m +m}{%
5511 \LWR@stoppars
5512 \LWR@forceemptyline%
5513 \LWR@subhtmlelementclass{#1}[#2]{#3}%
5514 #4%
5515 \LWR@htmltag{/#1}
5516 \LWR@startpars
5517 }

```

51.8 HTML5 semantic elements

```

\LWR@htmlelement {<element>}

5518 \newcommand*{\LWR@htmlelement}[1]{%
5519 \LWR@htmlblocktag{#1}%
5520 }

\LWR@htmlelementend {<element>}

5521 \newcommand*{\LWR@htmlelementend}[1]{%
5522 \LWR@stoppars
5523 \LWR@htmltag{/#1}
5524 \LWR@startpars
5525 }
5526
5527 \end{warpHTML}

```

51.9 High-level block and inline classes

These are high-level commands which allow the creation of arbitrary block or inline sections which may be formatted with css.

Nullified versions are provided for print mode.

For other direct-formatting commands, see section 90.

Env BlockClass [*style*] {*class*} High-level interface for <div> classes.

Ex: \begin{BlockClass}{class} text \end{BlockClass}

for PRINT output: 5528 \begin{warpprint}
5529 \NewDocumentEnvironment{BlockClass}{o m}{}{}%
5530 \end{warpprint}

for HTML output: 5531 \begin{warpHTML}
5532 \NewDocumentEnvironment{LWR@print@BlockClass}{o m}{}{}%
5533 \NewDocumentEnvironment{LWR@HTML@BlockClass}{o m}{}%
5534 {}%
5535 \LWR@htmldivclass[#1]{#2}%
5536 }
5537 {\LWR@htmldivclassend{#2}}
5538
5539 \LWR@formattedenv{BlockClass}
5540 \end{warpHTML}

\BlockClassSingle {*class*} {*text*} A single-line <div>, without a paragraph tag for the line of text.

for HTML & PRINT: 5541 \begin{warpall}
5542 \newcommand{\BlockClassSingle}[2]{#2}
5543 \end{warpall}

for HTML output: 5544 \begin{warpHTML}
5545 \newcommand{\LWR@HTML@BlockClassSingle}[2]{%
5546 \LWR@htmlelementclassline{div}{#1}{#2}%
5547 }
5548
5549 \LWR@formatted{BlockClassSingle}
5550 \end{warpHTML}

\InlineClass ((WP style)) [*style*] {*class*} {*text*}

High-level interface for inline span classes.

((WP style)) is css styling to add when formatting for a word processor import.

[*style*] is the css styling to add when not formatting for a word processor.

for PRINT output: 5551 \begin{warpprint}
5552 \NewDocumentCommand{\InlineClass}{D{()}{}} o m +m}{#4}%
5553 \end{warpprint}

for HTML output: 5554 \begin{warpHTML}
5555 \NewDocumentCommand{\LWR@print@InlineClass}{D{()}{}} o m +m}{#4}%
5556
5557 \NewDocumentCommand{\LWR@HTML@InlineClass}{D{()}{}} o m +m}{%
5558 \ifbool{FormatWP}{%
5559 \LWR@htmlespanclass[#1]{#3}{#4}%

```

5560 }{%
5561     \LWR@htmlspanclass[#2]{#3}{#4}%
5562 }%
5563 }
5564
5565 \LWR@formatted{InlineClass}
5566 \end{warpHTML}

```

Env LWR@BlockClassWP {<WPstyle>} {<HTMLstyle>} {<class>} Low-level interface for <div> classes with an automatic float ID. These are often used when \ifbool{FormatWP}.

The use of \textquotedbl instead of " provides improved compatibility with xeCJK.

for PRINT output: 5567 \begin{warpprint}
5568 \NewDocumentEnvironment{LWR@BlockClassWP}{m m m}{}{%
5569 \end{warpprint}

for HTML output: 5570 \begin{warpHTML}
5571 \NewDocumentEnvironment{LWR@print@LWR@BlockClassWP}{m m m}{}{%
5572 \NewDocumentEnvironment{LWR@HTML@LWR@BlockClassWP}{m m m}%
5573 {%
5574 \LWR@stoppars%
5575 \ifbool{FormatWP}%
5576 {%
5577 \addtocounter{LWR@thisautoidWP}{1}%
5578
5579 \LWR@htmltag{%
5580 div class=\textquotedbl#3\textquotedbl\ % space
5581 id=\textquotedbl%
5582 \LWR@print@mbox{autoidWP-\arabic{LWR@thisautoidWP}}%
5583 \textquotedbl%
5584 \ifblank{#1}{}{ style=\textquotedbl#1\textquotedbl}%
5585 }%
5586 }% FormatWP
5587 {%
5588 \LWR@htmltag{%
5589 div class=\textquotedbl#3\textquotedbl%
5590 \ifblank{#2}{}{ style=\textquotedbl#2\textquotedbl}%
5591 }% not FormatWP
5592 \LWR@startpars%
5593 }
5594 {\LWR@htmldivclassend{#3}}
5595
5596 \LWR@formattedenv{LWR@BlockClassWP}
5597 \end{warpHTML}

51.10 Closing HTML tags

for HTML output: 5598 \begin{warpHTML}

Sections H1, H2, etc. do not need a closing HTML tag, but we add a comment for readability:

```

5599 \newcommand*{\LWR@printclosebook}
5600   {\ifbool{HTMLDebugComments}{\LWR@htmlcomment{Closing book}}{}}
5601 \newcommand*{\LWR@printclosepart}
5602   {\ifbool{HTMLDebugComments}{\LWR@htmlcomment{Closing part}}{}}
5603 \newcommand*{\LWR@printclosechapter}
5604   {\ifbool{HTMLDebugComments}{\LWR@htmlcomment{Closing chapter}}{}}
5605 \newcommand*{\LWR@printclosesection}
5606   {\ifbool{HTMLDebugComments}{\LWR@htmlcomment{Closing section}}{}}
5607 \newcommand*{\LWR@printclosesubsection}
5608   {\ifbool{HTMLDebugComments}{\LWR@htmlcomment{Closing subsection}}{}}
5609 \newcommand*{\LWR@printclosesubsubsection}
5610   {\ifbool{HTMLDebugComments}{\LWR@htmlcomment{Closing subsubsection}}{}}
5611 \newcommand*{\LWR@printcloseparagraph}
5612   {\ifbool{HTMLDebugComments}{\LWR@htmlcomment{Closing paragraph}}{}}
5613 \newcommand*{\LWR@printclosesubparagraph}
5614   {\ifbool{HTMLDebugComments}{\LWR@htmlcomment{Closing subparagraph}}{}}

```

Lists require closing HTML tags:

```

5615 \newcommand*{\LWR@printcloselistitem}
5616   {\LWR@htmlltag{/li}}
5617 \newcommand*{\LWR@printclosedescitem}
5618   {\LWR@htmlltag{/dd}}
5619 \newcommand*{\LWR@printcloseitemize}
5620   {\LWR@htmlltag{/ul}}
5621 \newcommand*{\LWR@printcloseenumerate}
5622   {\LWR@htmlltag{/ol}}
5623 \newcommand*{\LWR@printclosedescription}
5624   {\LWR@htmlltag{/dl}}

```

```
5625 \end{warpHTML}
```

52 Paragraph handling

These commands generate the HTML paragraph tags when allowed and required.

Paragraph tags are or are not allowed depending on many conditions. Section 53 has high-level commands which allow paragraph-tag generation to start/stop. Even when allowed (\LWR@doingstartpars), tags are not generated until a L^AT_EX paragraph is being used (\LWR@doingapar). LWR@lateximagedepth is used to prevent nesting tags inside a *lateximage*. LWR@spandepth is used to prevent nesting paragraph tags inside a paragraph, which became important inside \fbox commands and other spans.

for HTML output: 5626 \begin{warpHTML}

Ctr LWR@spandepth Do not create paragraph tags inside of an HTML span.

```

5627 \newcounter{LWR@spandepth}
5628 \setcounter{LWR@spandepth}{0}

```

Bool LWR@doingstartpars Tells whether paragraphs may be generated.

```
5629 \newbool{LWR@doingstartpars}
5630 \boolearn{LWR@doingstartpars}
```

Bool LWR@doingapar Tells whether have actually generated and are currently processing paragraph text.

```
5631 \newbool{LWR@doingapar}
5632 \global\boolearn{LWR@doingapar}
```

\LWR@ensuredoingapar If are about to print something visible, and if allowed to start a new paragraph, ensure that are LWR@doingapar, so that paragraph tags are placed:

```
5633 \newcommand*{\LWR@ensuredoingapar}{%
5634 \ifbool{LWR@doingstartpars}{%
5635 {\global\boolearn{LWR@doingapar}}{%
5636 {}}{%
5637 }}
```

\PN@parnotes@auto Redefined by parnotes to print paragraph notes at the end of each paragraph.

```
5638 \def\PN@parnotes@auto{}%
```

\LWR@openparagraph

```
5639 \newcommand*{\LWR@openparagraph}{%
5640 {}}
```

See if paragraph handling is enabled:

```
5641 \ifbool{LWR@doingstartpars}{%
5642 { % handling pars}
```

See if have already started a `lateximage` or a ``. If so, do not generate nested paragraph tags.

```
5643 \ifboolexpr{%
5644 test {\ifnumcomp{\value{LWR@lateximagedepth}}{>}{0}} or
5645 test {\ifnumcomp{\value{LWR@spandepth}}{>}{0}}%
5646 }% nested par tags?
```

If so: Do nothing if already started a `lateximage` page. Cannot nest a `lateximage`. Also do nothing if already inside a ``. Do not nest paragraph tags inside a ``.

```
5647 {}% no nested par tags
```

Else: No `lateximage` or `` has been started yet, so it's OK to generate paragraph tags.

```
5648 {}% yes nest par tags
```

If `parnotes` is used, paragraph notes are inserted before starting the next paragraph:

```
5649 \PN@parnotes@auto%
```

The opening paragraph tag:

```
5650 \LWR@htmlltagc{\LWR@tagregularparagraph}\LWR@orignewline%
```

Now have started a paragraph.

```
5651 \global\booltrue{LWR@doingapar}%
```

At the endof each paragraph, generate closing tag and do regular /par stuff. (Attempting to use the `everyhook cr` hook for `\LWR@closeparagraph` does not work well.)

```
5652 \let\par\LWR@closeparagraph%
5653 }% end of yes nest par tags
5654 }% end of handling pars
5655 {}% not handling pars
5656 }
```

`\LWR@closeparagraph@br` Add an HTML break if in a span, and not in a `lateximage`, and not in tabular metadata.
Factored from `\LWR@closeparagraph`.

```
5657 \newcommand*{\LWR@closeparagraph@br}{%
5658 {%
5659   \ifboolexpr{%
5660     test {\ifnumcomp{\value{LWR@spandepth}}{>}{0}} and
5661     test {\ifnumcomp{\value{LWR@lateximagedepth}}{=}{0}} and
5662     not bool {LWR@intabularmetadata}%
5663   }%
5664   {\unskip\LWR@htmlltagc{br /}}%
5665   {}%
5666 }
```

`\LWR@closeparagraph`

```
5667 \newcommand*{\LWR@closeparagraph}{%
5668 {%
5669 % \LWR@traceinfo{LWR@closeparagraph}%
```

See if paragraph handling is enabled:

```
5670 \ifbool{LWR@doingapar}{}
```

If currently in paragraph mode:

```
5671 {%
  handling pars
```

See if already started a `lateximage` or a ``:

```
5672 \ifboolexpr{
```

```
5673      test {\ifnumcomp{\value{LWR@lateximagedepth}}{>}{0} or
5674      test {\ifnumcomp{\value{LWR@spandepth}}{>}{0}}
5675 }%
```

Add a parbreak if in a span, not in a lateximage, and not in table metadata.

```
5676  {% no nested par tags
5677      \LWR@closeparagraph@br%
5678  }% no nested par tags
```

If have not already started a `lateximage` or a ``:

```
5679  {% yes nest par tags
```

Print a closing tag and some extra vertical space.

(The fill seems to be required to force the `caption` package to create flush left caption text in the HTML.)

```
5680  \@hspacer{\fill}\hspace*\fill
5681  \leavevmode\LWR@newline%
5682  \LWR@htmltagc{/LWR@tagregularparagraph}%
```

No longer doing a paragraph:

```
5683  \global\boolfalse{LWR@doingapar}%
```

Disable the special `minipage` & `\hspace` interaction until a new minipage is found:

```
5684  \global\boolfalse{LWR@minipagethispar}%
```

If `parnotes` is used, paragraph notes are inserted after ending the previous paragraph:

```
5685  \PN@parnotes@auto%
5686  }% end of yes nest par tags
5687 }% end of handling pars
```

Add a parbreak if in a span, not in a `lateximage`, and not in table metadata.

```
5688  {% not handling pars
5689      \LWR@closeparagraph@br%
5690  }% not handling pars
```

In most cases, finish with a L^AT_EX `\par`, but in the case of paragraphs between lines in a tabular fetch the next token instead:

```
5691 \ifboolexpr{%
5692     not bool {LWR@doingapar} and
5693     test {\ifnumcomp{\value{LWR@tabulardepth}}{>}{0}} and
5694     test {
5695         \ifnumcomp{\value{LWR@tabulardepth}}{=}{\value{LWR@tabularpardepth}}
5696     } and
5697     bool {LWR@intabularmetadata} and
```

```

5698     not bool {LWR@tableparcell} and
5699     test {\ifnumcomp{\value{LWR@lateximagedepth}}{=}{0}}
5700 }%
5701 {%
5702     \LWR@getmynexttoken%
5703 }{%
5704     \LWR@origpar%
5705 }%
5706 }

5707 \end{warpHTML}

```

53 Paragraph start/stop handling

These commands allow/disallow the generation of HTML paragraph tags.

Section 52 has the commands which actually generate the tags.

The everyhook package is used to generate the opening paragraph tags. The closing tags are generated by \par.

for HTML output: 5708 \begin{warpHTML}

\LWR@startpars Begin handling HTML paragraphs. This allows an HTML paragraph to start, but one has not yet begun.

```

5709 \newcommand*{\LWR@startpars}{%
5710 {%
5711 % \LWR@traceinfo{\LWR@startpars}%

```

Ignore if inside a span:

```

5712 \ifnumcomp{\value{LWR@spandepth}}{>}{0}%
5713 {}%
5714 {%

```

See if currently handling HTML paragraphs:

```

5715 \ifbool{\LWR@doingstartpars}{%

```

If already in paragraph mode, do nothing.

```

5716 {}%

```

If not currently in paragraph mode:

```

5717 {%

```

At the start of each paragraph, generate an opening tag:

```

5718 \PushPreHook{par}{\LWR@openparagraph}%

```

At the end of each paragraph, generate closing tag then do regular /par actions:

```
5719      \let\par\LWR@closeparagraph
5720
5721  }% an intentionally blank line
```

Are now handling paragraphs, but have not yet actually started one:

```
5722  \global\setbool{\LWR@doingstartpars}{true}%
```

No <par> tag yet to undo:

```
5723  \global\boolfalse{\LWR@doingapar}%
5724 }% nestspan
5725 % \LWR@traceinfo{\LWR@startpars: done}%
5726 }
```

\LWR@stopars Stop handling HTML paragraphs. Any currently open HTML paragraph is closed, and no more will be opened.

```
5727 \newcommand*{\LWR@stopars}{%
5728 {%
```

Ignore if inside a span:

```
5729 \ifnumcomp{\value{\LWR@spandepth}}{>}{0}%
5730 {}%
5731 {%
```

See if currently handling HTML paragraphs:

```
5732 \ifbool{\LWR@doingapar}{}
```

if currently in an HTML paragraph:

```
5733 {%
```

Print a closing tag:

```
5734  \leavevmode\LWR@orignewline%
5735  \LWR@htmltagc{/\\LWR@tagregularparagraph}%
5736  \LWR@orignewline%
```

No longer have an open HTML paragraph:

```
5737  \global\boolfalse{\LWR@doingapar}%
```

Disable the special `\minipage` & `\hspace` interaction until a new minipage is found:

```
5738  \global\boolfalse{\LWR@minipagethispar}%
5739  }%
```

If was not in an HTML paragraph:

```
5740     {}%
```

See if currently allowing HTML paragraphs:

```
5741     \ifbool{LWR@doingstartpars}{%
```

If so: clear the par hook to no longer catch paragraphs:

```
5742     {\ClearPreHook{par}}%
```

Else: Do nothing:

```
5743     {}%
```

No longer in paragraph mode:

```
5744     \global\setbool{LWR@doingstartpars}{false}{%
```

No <p> tag to undo:

```
5745     \global\boolfalse{LWR@doingapar}%
5746 }% nestspan
5747 }
```

```
5748 \end{warpHTML}
```

54 Indentfirst

Pkg indentfirst indentfirst redefines \@afterindentfalse to be \@afterindenttrue. This is reversed \AtBeginDocument here.

for HTML output: 5749 \begin{warpHTML}

```
5750 \AtBeginDocument{
5751 \def \@afterindentfalse{\let\if@afterindent\iffalse}
5752 \@afterindentfalse
5753 }
5754 \let\LWR@afterindent\syntaxhighlight\fi% syntax highlighting
5755 \end{warpHTML}
```

55 Page headers and footers

for HTML & PRINT: 5756 \begin{warpall}

In the following, catcode is manually changed back and forth without groups, since new macros are being defined which must not be contained within the groups.

```
5757 \newcommand{\LWR@firstpagetop}{} % for the home page alone
5758 \newcommand{\LWR@pagetop}{} % for all other pages
5759 \newcommand{\LWR@pagebottom}{}%
```

\HTMLFirstPageTop {*text and logos*}

```
5760 \newcommand{\HTMLFirstPageTop}[1]{%
5761     \renewcommand{\LWR@firstpagetop}{#1}%
5762 }
```

\HTMLPageTop {*text and logos*}

```
5763 \newcommand{\HTMLPageTop}[1]{%
5764     \renewcommand{\LWR@pagetop}{#1}%
5765 }
```

\HTMLPageBottom {*text and logos*}

```
5766 \newcommand{\HTMLPageBottom}[1]{%
5767     \renewcommand{\LWR@pagebottom}{#1}%
5768 }
```

```
5769 \end{warpall}
```

56 CSS

for HTML output: 5770 \begin{warpHTML}

\LWR@currentcss The css filename to use. This may be changed mid-document using \CSSFilename, allowing different css files to be used for different sections of the document.

```
5771 \newcommand*{\LWR@currentcss}{lwarp.css}
```

\CSSFilename {*new-css-filename.css*} Assigns the css file to be used by the following HTML pages.

```
5772 \newcommand*{\CSSFilename}[1]{%
5773 \renewcommand*{\LWR@currentcss}{#1}%
5774 \@onelvel@sanitize\LWR@currentcss%
5775 }
5776
5777 \end{warpHTML}
```

for PRINT output: 5778 \begin{warpprint}

```
5779 \newcommand*{\CSSFilename}[1]{}
5780 \end{warpprint}
```

57 MathJax script

for HTML output: 5781 \begin{warpHTML}
 Default: lwarp_mathjax.txt

\LWR@mathjaxfilename The MathJax script filename to use. This file is copied into the head of each HTML page. This may be changed mid-document using \MathJaxFilename, allowing the use of a custom MathJax script, such as for a local repository, or different MathJax script files to be used for different sections of the document.

5782 \newcommand*\{\LWR@mathjaxfilename\}{lwarp_mathjax.txt}

\MathJaxFilename {\<filename>} Assigns the MathJax script file to be used by the following HTML pages.

```
5783 \newcommand*\{\MathJaxFilename\}[1]{%
5784     \renewcommand*\{\LWR@mathjaxfilename\}{#1}%
5785     \onelevel@sanitize\LWR@mathjaxfilename%
5786 }
5787
5788 \end{warpHTML}
```

for PRINT output: 5789 \begin{warpprint}
 5790 \newcommand*\{\MathJaxFilename\}[1]{}
 5791 \end{warpprint}

58 Title, HTML meta author, HTML meta description

for HTML output: 5792 \begin{warpHTML}

\title {\<title>} Modified to remember \thetitle, which is used to set the HTML page titles.

```
5793 \let\LWR@origtitle\title
5794
5795 \renewcommand*\{\title\}[1]{%
5796     \LWR@origtitle{#1}%
5797     \begingroup%
5798         \renewcommand{\thanks\}[1]{\%}
5799         \protected@xdef\thetitle{#1}%
5800     \endgroup%
5801 }
```

5802 \end{warpHTML}

for HTML & PRINT: 5803 \begin{warpall}

\HTMLTitle {\<Titlename>} The Title to place into an HTML meta tag. The default is to use the document \title's setting.

```

5804 \providecommand{\thetitle}{\BaseJobname}
5805
5806 \newcommand{\theHTMLTitle}{\thetitle}
5807
5808 \newcommand{\HTMLTitle}[1]{\renewcommand{\theHTMLTitle}{#1}}

```

\HTMLAuthor {*authorname*} The author to place into an HTML meta tag. If none given, the default is \theauthor, which is empty unless the `titling` package is used.

```

5809 \providecommand{\theauthor}{}
5810
5811 \newcommand{\theHTMLAuthor}{\theauthor}
5812
5813 \newcommand{\HTMLAuthor}[1]{\renewcommand{\theHTMLAuthor}{#1}}

```

This is placed inside an HTML meta tag at the start of each file. This may be changed mid-document using \HTMLDescription, allowing different HTML descriptions to be used for different sections of the document.

⚠ **HTML author** Do not use double quotes, and do not exceed 150 characters.

\HTMLDescription {*New HTML meta description.*} Assigns the HTML file's description meta tag.

```

5814 \newcommand{\LWR@currentHTMLDescription}{}
5815
5816 \newcommand{\HTMLDescription}[1]{%
5817 \renewcommand{\LWR@currentHTMLDescription}{#1}}
5818 }
5819
5820 \end{warpall}

```

59 Footnotes

lwarp uses native L^AT_EX footnote code, although with its own \box to avoid the L^AT_EX output routine. The usual functions mostly work as-is.

footnote numbering To have footnote numbers reset each time footnotes are printed:

```
\setcounter{footnoteReset}{1}
```

For `bigfoot`, `manyfoot`, or `perpage`:

```
\MakePerPage{footnoteX}
— or —
\MakeSortedPerPage{footnoteX}
```

The footnotes are reset when they are printed, according to section level as set by `FootnoteDepth`, which is not necessarily by HTML page. This is recommended for `\alph`, `\Alph`, or `\fnsymbol` footnotes, due to the limited number of symbols which are available.

footmisc The `footmisc` stable option is emulated by `lwarf`.

⚠ sectioning commands When using footnotes in sectioning commands, to generate consistent results between print and HTML, use the `footmisc` package with the `stable` option, provide a short toc entry, and `\protect` the `\footnote`:

```
\usepackage[stable]{footmisc}
...
\subsection[Subsection Name]
{Subsection Name\protect\footnote{A footnote.}}
```

memoir with footmisc If using `memoir` class, with which `lwarf` preloads `footmisc`, the `stable` option must be declared before `lwarf` is loaded:

```
\PassOptionsToPackage{stable}{footmisc}
\usepackage{lwarf}
...
```

Do not use a starred sectioning command. As an alternative, it may be possible to adjust `\secnumdepth` instead.

Several kinds of footnotes are used: in a regular page, in a minipage, or as thanks in the titlepage. Each of these is handle differently.

59.1 Regular page footnotes

In HTML documents, footnotes are placed at the bottom of the web page or the section, depending on `FootnoteDepth`, using the L^AT_EX box `\LWR@footnotebox`. Using this instead of the original `\footins` box avoids having footnotes be printed by the output routine, since footnotes should be printed per HTML page instead of per PDF page.

See section 59.4 for the implementation.

59.2 Minipage footnotes

See section 59.5 for how minipage footnotes are gathered. See section 89.3 for how minipage footnotes are placed into the document.

59.3 Titlepage thanks

See section 66.7 for titlepage footnotes.

59.4 Regular page footnote implementation

for HTML & PRINT: 5821 `\begin{warpall}`

Ctr FootnoteDepth Determines how deeply to place footnotes in the HTML files, similar to `tocdepth`. The Default: 3

default of 3 places footnotes before each \subsubsection or higher. See table 9 for a table of L^AT_EX section headings.

```
5822 \newcounter{FootnoteDepth}
5823 \setcounter{FootnoteDepth}{3}
```

Ctr footnoteReset If non-zero, the footnote counter is reset to this value each time the footnotes are printed, as controlled by FootnoteDepth. For the manyfoot and bigfoot packages, additional counters such as footnote<suffix>Reset will be defined as well. These counters may be set non-zero by the user, and are also set if the perpage's \MakePerPage or \MakeSortedPerPage macros are used for the footnote or footnote<suffix> counters.

(The name is not capitalized because it is made from the counter's name with "Reset" appended.)

```
5824 \newcounter{footnoteReset}
5825 \setcounter{footnoteReset}{0}

5826 \end{warpall}
```

for HTML output: 5827 \begin{warpHTML}

\LWR@footnotebox Patch L^AT_EX footnotes to use a new \box instead of an insert for lwarp footnotes. This avoids having the original \footins appear at the bottom of a lateximage, which is on its own new page.

```
5828 \newbox\LWR@footnotebox
```

Much of the following has unneeded print-mode formatting removed.

```
\@makefntext {\langle text\rangle}

5829 \long\def\@makefntext#1{\textsuperscript{\@thefnmark}#1}

\@makefnmark

5830 \def\@makefnmark{%
5831   \textsuperscript{\@thefnmark}%
5832 }
```

Footnotes may be in regular text, in which case paragraphs are tagged, or in a table data cell or lateximage, in which case paragraph tags must be added manually.

In a lateximage during HTML output, the lateximage is placed inside a print-mode minipage, but the footnotes are broken out by:

```
\def\@mpfn{footnote}
\def\thempfn{\thefootnote}
\let\@footnotetext\LWR@footnotetext
```

```
\LWR@@footnotetext {⟨text⟩} {⟨footnote box name⟩}
```

Factored to allow multiple footnote boxes for `manyfoot`.

```
5833 \long\def\LWR@@footnotetext#1#2{%
5834 \LWR@traceinfo{\LWR@footnotetext}%
5835 \global\setbox\csname #2\endcsname=\vbox{%
```

Add to any current footnotes:

```
5836 \unvbox\csname #2\endcsname%
```

Remember the footnote number for `\ref`:

```
5837 \protected@edef@\currentlabel{%
5838   \csname p@footnote\endcsname\@thefnmark%
5839 }% @currentlabel
```

Open a group:

```
5840 \color@begingroup%
```

Use HTML superscripts in the footnote even inside a `lateximage`:

```
5841 \renewrobustcmd{\textsuperscript}[1]{\LWR@htmlspan{sup}{##1}}%
```

Use paragraph tags if in a tabular data cell or a `lateximage`:

```
5842 \ifthenelse{%
5843   \boolean{\LWR@doingstartpars} \AND%
5844   \cnttest{\value{\LWR@lateximagedepth}}{=}{0}%
5845 }%
5846 {}%
5847 {\LWR@htmltagc{\LWR@tagregularparagraph}\LWR@orignewline}%
```

Append the footnote to the list:

```
5848 \@makefnlist{#1}%
```

Closing paragraph tag:

```
5849 \ifthenelse{%
5850   \boolean{\LWR@doingstartpars} \AND%
5851   \cnttest{\value{\LWR@lateximagedepth}}{=}{0}%
5852 }%
5853 {}%
5854 {}%
5855 \LWR@htmltagc{/}\LWR@tagregularparagraph}%
5856 \LWR@orignewline%
5857 }%
```

Close the group:

```
5858     \color@endgroup%
5859 }% vbox
```

Paragraph handling:

```
5860 \LWR@ensuredoingapar%
5861 }%
```

```
\LWR@footnotetext {<text>}
```

```
5862 \long\def\LWR@footnotetext#1{\LWR@footnotetext{#1}{\LWR@footnotebox}}
```

```
\@footnotetext {<text>}
```

```
5863 \LetLtxMacro\@footnotetext\LWR@footnotetext
```

59.5 Minipage footnote implementation

Patch L^AT_EX minipage footnotes to use a new \box instead of an insert for lwarp minipage footnotes. This avoids having the original \mpfootins appear at the bottom of a lateximage, which is on its own new page.

```
5864 \newbox\LWR@mpfootnotes
```

```
\@mpfootnotetext {<text>}
```

```
5865 \long\def\@mpfootnotetext#1{%
5866 \LWR@traceinfo{@mpfootnotetext}%
5867 \global\setbox\LWR@mpfootnotes\vbox{%
5868     \unvbox\LWR@mpfootnotes%
5869     \reset@font\footnotesize%
5870     \hsize\columnwidth%
5871     \parboxrestore%
5872     \protected@edef\@currentlabel%
5873         {\csname p@mpfootnote\endcsname\@thefnmark}%
5874     \color@begingroup%
```

Use paragraph tags if in a tabular data cell or a lateximage:

```
5875 \ifthenelse{%
5876     \boolean{\LWR@doingstartpars} \AND%
5877     \cnttest{\value{\LWR@lateximagedepth}}{=}{0}%
5878 }%
5879 {}%
5880 {\LWR@htmltagc{\LWR@tagregularparagraph}\LWR@orignewline}%

5881 \makefntext{%
5882     \ignorespaces#1%
5883 }%
```

Don't add the closing paragraph tag if are inside a `\lateximage`:

```

5884     \ifthenelse{\cnttest{\value{LWR@lateximagedepth}}>}{0}%
5885         {}%
5886         {}%
5887             \leavevmode\LWR@orignewline%
5888             \LWR@htmltagc{/}\LWR@tagregularparagraph}%
5889             \LWR@origpar%
5890         }%
5891     \color@endgroup%
5892 }% vbox

```

Paragraph handling:

```

5893 \LWR@ensuredoingapar%
5894 \LWR@traceinfo{@mpfootnotetext: done}%
5895 }

```

`\thempfootnote` Redefined to remove the `\itshape`, which caused an obscure compiling error in some situations.

```

5896 \AtBeginDocument{%
5897 \def\thempfootnote{\@alph\c@mpfootnote}%
5898 }

```

59.6 Printing pending footnotes

`\LWR@@printpendingfootnotes {⟨footnote counter name⟩}`

```

5899 \newcommand*{\LWR@printpendingfootnotes}[1]{%
5900 \expandafter\ifvoid\csname LWR@#1box\endcsname\else
5901     \LWR@forcenewpage
5902     \begin{BlockClass}{footnotes}
5903         \LWR@origmedskip
5904         \unvbox\csuse{\LWR@#1box}
5905         \setbox\csuse{\LWR@#1box}=\vbox{%
5906             \end{BlockClass}
5907             \ifltxcounter{\#1Reset}{%
5908                 \ifnumgreater{\value{\#1Reset}}{0}{%
5909                     \setcounter{\#1}{\value{\#1Reset}}%
5910                     \addtocounter{\#1}{-1}%
5911                 }{}%
5912             }{}%
5913 \fi
5914 }

```

`\LWR@printpendingfootnotes` Enclose the footnotes in a class, print, then clear. For `manynotes`, new footnotes may be added via `\appto`.

```

5915 \newcommand*{\LWR@printpendingfootnotes}{%
5916     \LWR@printpendingfootnotes{footnote}%
5917 }

```

`\LWR@maybeprintpendingfootnotes {⟨depth⟩}` Used to print footnotes before sections only if formatting for an EPUB or word processor:

```
5918 \newcommand*{\LWR@maybeprintpendingfootnotes}[1]{%
5919 \ifboolexpr{%
5920   not test{\ifnumcomp{#1}{>}{\value{FootnoteDepth}}} or
5921   bool{FormatEPUB} or
5922   bool{FormatWP}
5923 }%
5924 {\LWR@printpendingfootnotes}%
5925 {}%
5926 }
```

`\LWR@printpendingmpfootnotes` Enclose the minipage footnotes in a class, print, then clear.

```
5927 \newcommand*{\LWR@printpendingmpfootnotes}{%
5928 \ifvoid\LWR@mpfootnotes\else
5929   \LWR@forcenewpage
5930   \begin{BlockClass}{footnotes}
5931     \LWR@print\vspace*{\baselineskip}
5932     \unvbox\LWR@mpfootnotes
5933     \setbox\LWR@mpfootnotes=\vbox{}
5934   \end{BlockClass}
5935 \fi
5936 }

5937 \end{warpHTML}
```

60 Marginpars

`\marginpar [⟨left⟩] {⟨right⟩}` `\marginpar` may contains paragraphs, but in order to remain inline with the surrounding text `lwarp` nullifies block-related macros inside the `\marginpar`. Paragraph breaks are converted to `
` tags.

`\marginparBlock [⟨left⟩] {⟨right⟩}` To include block-related macros, use `\marginparBlock`, which takes the same arguments but creates a `<div>` instead of a ``. A line break will occur in the text where the `\marginBlock` occurs.

for HTML output: 5938 `\begin{warpHTML}`

```
\marginpar [⟨left⟩] {⟨right⟩}

5939 \renewcommand{\marginpar}[2][]{%
5940 \ifbool{FormatWP}{%
5941 {}%
5942 \begin{LWR@BlockClassWP}{width:2in; float:right; margin:10pt}{}{marginblock}%
5943 #2
5944 \end{LWR@BlockClassWP}
5945 }%
5946 {}%
5947 \LWR@htmlspanclass{\marginpar}{#2}%
5948 }
```

```
5948 }%
5949 }

\marginparBlock  [⟨left⟩] {⟨right⟩}
```

For use when the marginpar will be more than one paragraph, and/or contains more than simple text.

HTML version.

```
5950 \newcommand{\marginparBlock}[2][]{%
5951 \LWR@stoppars%
5952 \ifbool{FormatWP}{%
5953 {%
5954   \begin{LWR@BlockClassWP}{width:2in; float:right; margin:10pt}{}{marginblock}
5955   #2
5956   \end{LWR@BlockClassWP}
5957 }{%
5958   \begin{BlockClass}[width:2in; float:right; margin:10pt]{marginparblock}
5959   #2
5960   \end{BlockClass}
5961 }%
5962 \LWR@startpars%
5963 }
```

```
\reversemarginpar
```

```
5964 \renewcommand*{\reversemarginpar}{}  
  
\normalmarginpar
```

```
5965 \renewcommand*{\normalmarginpar}{}  
5966 \end{warpHTML}
```

for PRINT output: 5967 \begin{warpprint}

```
\marginparBlock  [⟨left⟩] {⟨right⟩}
```

For use when the marginpar will be more than one paragraph, and/or contains more than simple text.

Print version.

```
5968 \LetLtxMacro\marginparBlock\marginpar
5969 \end{warpprint}
```

61 Splitting HTML files

- Files are split according to `FileDepth` and `CombineHigherDepths`.

- Filenames are sanitized by \LWR@filenamenoblanks.
- \LWR@newhtmlfile finishes an HTML page, adds a comment to tell where and how to split the file, then starts a new HTML page.

for HTML & PRINT: 5970 \begin{warpall}

Ctr FileDepth {*section depth*} determines how deeply to break into new HTML files, similar to tocdepth. The default of -5 produces one large HTML file.

```
5971 \newcounter{FileDepth}
5972 \setcounter{FileDepth}{-5}
```

Bool CombineHigherDepths Combiile higher-level sections together into one file?

```
5973 \newbool{CombineHigherDepths}
5974 \booltrue{CombineHigherDepths}
```

\FilenameLimit Maximum length of the generated filenames.

```
5975 \newcommand*\{\FilenameLimit}{80}
5976 \end{warpall}
```

for HTML output: 5977 \begin{warpHTML}

\LWR@thisfilename The currently-active filename or number. At first, this is the homepage.

```
5978 \AtBeginDocument{
5979 \ifbool{FileSectionNames}%
5980   {\newcommand*\{\LWR@thisfilename}{\HomeHTMLFilename}}
5981   {\newcommand*\{\LWR@thisfilename}{\emptyset}}
5982 }
```

\LWR@thisnewfilename The filename being sanitized.

```
5983 \newcommand*\{\LWR@thisnewfilename}{}%
```

\LWR@simplifyname * {*expression*} Simplify \LWR@thisnewfilename.

If starred, detokenizes the input expression. If found, changes the expression to a single detokenized dash.

```
5984 \NewDocumentCommand{\LWR@simplifyname}{s m}{%
5985 \IfBooleanTF{#1}{%
5986   \StrSubstitute{\LWR@thisnewfilename}{%
5987     {\detokenize{#2}}}{%
5988     {\detokenize{-}}[\LWR@thisnewfilename]}%
5989 }{%
5990   \StrSubstitute{\LWR@thisnewfilename}{%
```

```

5991      {#2}%
5992      {\detokenize{-}}[\LWR@thisfilename]%
5993 }
5994 }
```

\LWR@simplifystyle User-defined filename simplifications. Redefine with \newcommand.

```
5995 \newcommand*{\LWR@simplifystyle}{}{}
```

\FilenameSimplify * {*phrase*} Assign a user-defined filename simplification. Appends to \LWR@simplifystyle.

```

5996 \NewDocumentCommand{\FilenameSimplify}{s m}{%
5997 \IfBooleanTF{#1}{%
5998     \appto{\LWR@simplifystyle}{%
5999         \LWR@simplifyname*{#2}%
6000     }%
6001 }{%
6002     \appto{\LWR@simplifystyle}{%
6003         \LWR@simplifyname{#2}%
6004     }%
6005 }%
6006 }
```

\LWR@filenamenoblanks {*filename*}

Convert blanks into dashes, removes short words, store result in \LWR@thisfilename.

Also see \LWR@nullfonts for nullified macros.

```

6007 \newcommand*{\LWR@filenamenoblanks}[1]{%
6008 \begingroup
```

Locally temporarily disable direct-formatting commands, not used in filenames:

```

6009 \LWR@nullfonts%
6010 \renewcommand*{\LWR@htmlltagc}[1]{}%
```

```
6011 \edef\LWR@thisfilename{#1}%
```

Replaces common macros with hyphens. (\& is done by \LWR@nullfonts.)

```

6012 \RenewDocumentCommand{\LWR@subsingledollar}{s m m m}{%
6013 \LWR@simplifyname{\_}
6014 \LWR@simplifyname{\#}
6015 \LWR@simplifyname{\textbackslash}
6016 \LWR@simplifyname{\protect}
6017 \LWR@simplifyname{\_}
6018 \LWR@simplifyname{\textless}
6019 \LWR@simplifyname{\textgreater}
```

6020 \edef\LWR@thisnewfilename{\detokenize\expandafter{\LWR@thisnewfilename}}%

6021 \LWR@traceinfo{\LWR@filenamenoblanks edef: !\LWR@thisnewfilename!}%
 6022 \fullexpandarg%

Convert spaces into hyphens:

6023 \LWR@simplifyname*{ }

Convert punctuation into hyphens:

6024 \LWR@simplifyname*{!}
 6025 \LWR@simplifyname*{,}

 6048 \LWR@simplifyname*{^}
 6049 \LWR@simplifyname*{~}
 6050 \LWR@simplifyname*{[]}
 6051 \LWR@simplifyname*{[]}
 6052 \LWR@simplifyname*{'}

Convert short words:

6053 \LWR@simplifyname*{-s-}

6054 \LWR@simplifyname*{-S-}

6055 \LWR@simplifyname*{-a-}

```

6056 \LWR@simplifyname*{-A-}
6057 \LWR@simplifyname*{-an-}
6058 \LWR@simplifyname*{-AN-}
6059 \LWR@simplifyname*{-to-}
6060 \LWR@simplifyname*{-TO-}
6061 \LWR@simplifyname*{-by-}
6062 \LWR@simplifyname*{-BY-}
6063 \LWR@simplifyname*{-of-}
6064 \LWR@simplifyname*{-OF-}
6065 \LWR@simplifyname*{-and-}
6066 \LWR@simplifyname*{-AND-}
6067 \LWR@simplifyname*{-for-}
6068 \LWR@simplifyname*{-FOR-}
6069 \LWR@simplifyname*{-the-}
6070 \LWR@simplifyname*{-THE-}

```

Convert custom words:

```
6071 \LWR@simplifycustom%
```

Convert multiple hyphens:

```

6072 \LWR@simplifyname*{----}
6073 \LWR@simplifyname*{---}
6074 \LWR@simplifyname*{--}
6075 \LWR@simplifyname*{--}

```

If pdflATEX and not utf8 encoding, don't try to convert emdash, endash:

```

6076 \ifPDFTeX% pdflatex or dvi latex
6077 \ifdefstring{\inputencodingname}{utf8}{%
6078 \LWR@simplifyname*{-}
6079 %      emdash
6080 \LWR@simplifyname*{-}
6081 %      endash
6082 }{}%
6083 \else% not PDFTeX
6084 \LWR@simplifyname*{-}
6085 \LWR@simplifyname*{-}
6086 \fi%

```

If starts with a dash, remove the leading dash:

```

6087 \IfBeginWith{\LWR@thisnewfilename}{\detokenize{-}}{%
6088     \StrGobbleLeft{\LWR@thisnewfilename}{1}[\LWR@thisnewfilename]%
6089 }{}%

```

If ends with a dash, remove the trailing dash:

```

6090 \IfEndWith{\LWR@thisnewfilename}{\detokenize{-}}{%
6091     \StrGobbleRight{\LWR@thisnewfilename}{1}[\LWR@thisnewfilename]%
6092 }{}%

```

Limits the length of the filename:

```
6093 \StrLeft{\LWR@thisfilename}{\FilenameLimit}[\LWR@thisfilename]%
```

Return the global result:

```
6094 \global\let\LWR@thisfilename\LWR@thisfilename%
6095 \endgroup%
6096 \LWR@traceinfo{\LWR@filenamenoblanks: result is \LWR@thisfilename}%
6097 }
```

LWR@previousautopagelabel Ctr Remembers which autopage label was most recently generated. Used to avoid duplicates.

```
6098 \newcounter{LWR@previousautopagelabel}
6099 \setcounter{LWR@previousautopagelabel}{-1}
```

File *_html.aux A new entry in the *_html.aux file is used to help cross-references:

```
\newlabel{autopage-<nnn>}{{<x>}{<y>}}
```

\LWR@newautopagelabel {<pagenumber counter>}

\BaseJobname is added to the label in case xr or xr-hyper are used.

```
6100 \newcommand*{\LWR@newautopagelabel}[1]{%
6101 \ifnumequal{\value{LWR@previousautopagelabel}}{\value{page}}{%
6102 {}% no action if this autopage label has already been defined
6103 {}%
6104 \label{\BaseJobname-autopage-\arabic{#1}}%
6105 \setcounter{LWR@previousautopagelabel}{\value{page}}%
6106 }%
6107 }
```

61.1 Customizing MATHJAX

\LWR@customizedMathJax Additional MATHJAX definitions to be added to the start of each HTML page.

```
6108 \newcommand*{\LWR@customizedMathJax}{}%
```

\CustomizeMathJax MATHJAX does not have preexisting support every possible math function. Additional MATHJAX function definitions may be defined. These will be declared at the start of each HTML page, and thus will have a global effect.

Examples:

```

\CustomizeMathJax{
  \newcommand{\expval}[1]{\langle#1\rangle}
  \newcommand{\abs}[1]{\lvert#1\rvert}
}

\CustomizeMathJax{\newcommand{\arsinh}{\text{arsinh}}}
\CustomizeMathJax{\newcommand{\arcosh}{\text{arcosh}}}
\CustomizeMathJax{\newcommand{\NN}{\mathbb{N}}}

6109 \newcommand*\CustomizeMathJax[1]{%
6110   \appto{\LWR@customizedMathJax}{%

6189 }%
6190 }
```

If using file numbers instead of names, the name is set to the next file number.

```
6191 {\renewcommand*{\LWR@thisfilename}{\arabic{\LWR@htmlfilename}}}
```

Include an HTML comment to instruct lwarpmk where to split the files apart. Uses pipe-separated fields for `split_html.gawk`. Uses monospaced font with ligatures disabled for everything except the title.

```
6192 \LWR@traceinfo{\LWR@newhtmlfile: about to print start file}%
```

\LWR@nullfonts to allow math in a section name.

```
6193 \begingroup%
6194 \LWR@nullfonts%
6195 \LWR@htmlblockcomment{%
6196 |Start file|%
6197 \LWR@htmlsectionfilename{\LWR@thisfilename}|%
6198 }
6199 \endgroup%
```

At the top of the starting file:

```
6200 \LWR@stoppars
6201
```

Start a new file with the given section name:

```
6202 \LWR@filestart[#1]
6203
```

Track the page numbers:

```
6204 \setcounter{\LWR@latestautopage}{\value{page}}%
6205 \LWR@newautopagelabel{\LWR@latestautopage}%
```

No navigation between files if formatting for an EPUB or word processor:

```
6206 \ifthenelse{\boolean{FormatEPUB} \OR \boolean{FormatWP}}
6207   {}
6208   {\LWR@topnavigation}
6209
```

No header if between files if formatting for an EPUB or word processor:

```
6210 \ifthenelse{\boolean{FormatEPUB} \OR \boolean{FormatWP}}
6211   {}
6212   {

6213     \ifdefempty{\LWR@pagetop}{}{
6214       \LWR@htmlelement{header}
6215
6216       \LWR@pagetop
6217
6218       \LWR@htmlelementend{header}
6219     }
6220   }
6221
```

The container for the sidetoc and text body:

```
6222 \LWR@htmlelementclass{div}{bodyandsidetoc}
```

No sidetoc if formatting for an EPUB or word processor:

```

6223 \ifthenelse{\boolean{FormatEPUB}\OR\boolean{FormatWP}}
6224     {}
6225     {\LWR@sidetoc}
6226

```

Start of the <textbody>:

```

6227 \LWR@htmlelementclass{div}{bodycontainer}
6228 \LWR@htmlelementclass{section}{textbody}
6229

```

Print title only if there is one. Skip if formatting for an EPUB or word processor:

```

6230 \ifthenelse{\boolean{FormatEPUB}\OR\boolean{FormatWP}}%
6231     {}%
6232     {%
6233         \ifcvoid{\thetitle}{}{%
6234             \LWR@printthetitle%
6235         }%
6236     }%

```

Keep paragraph tags disabled for now:

```

6237 \LWR@stoppars
6238

```

If using MATHJAX, disable \ensuremath by printing a nullified definition at the start of each file, and add further customizations:

```

6239 \LWR@customizeMathJax
6240 \LWR@traceinfo{\LWR@newhtmlfile: done}
6241 }
6242 \end{warpHTML}

```

62 Sectioning

Sectioning and cross-references have been emulated from scratch, rather than try to patch several layers of existing L^AT_EX code and packages. Formatting is handled by css, so the emulated code has much less work to do than the print versions.

Unicode accents in filenames	Section names and the resulting filenames with accented characters are partially supported, depending on the ability of <i>pdflatex</i> to generate characters and <i>pdftotext</i> to read them. If extra symbols appear in the text, it may be that <i>pdflatex</i> is actually producing a symbol over or under a character, resulting in <i>pdftotext</i> picking up the accent symbol separately.
-------------------------------------	--

X_EL^AT_EX and LuaL^AT_EX directly support accented section and file names.

for HTML output: 6243 \begin{warpHTML}

62.1 User-level starred section commands

\ForceHTMLPage For HTML output, forces the next section to be on its own HTML page, if FileDepth allows, even if starred. For use with \printindex and others which generate a starred section which should be on its own HTML page. Also see \ForceHTMLTOC.

For print output, no effect.

```
6244 \newbool{LWR@forcinghtmlpage}
6245 \boolfalse{LWR@forcinghtmlpage}
6246
6247 \newcommand*{\ForceHTMLPage}{%
6248 \global\booltrue{LWR@forcinghtmlpage}%
6249 }
```

\ForceHTMLTOC For HTML output, forces the next section to have a TOC entry, even if starred. For use with \printindex and others which generate a starred section which should be in the TOC so that it may be accessed via HTML. Not necessary if used with tocbibind. Also see \ForceHTMLPage.

For print output, no effect.

```
6250 \newbool{LWR@forcinghtmltoc}
6251 \boolfalse{LWR@forcinghtmltoc}
6252
6253 \newcommand*{\ForceHTMLTOC}{%
6254 \global\booltrue{LWR@forcinghtmltoc}%
6255 }
```

6256 \end{warpHTML}

for PRINT output: 6257 \begin{warpprint}
6258 \newcommand*{\ForceHTMLPage}{}
6259 \newcommand*{\ForceHTMLTOC}{}
6260 \end{warpprint}

for HTML output: 6261 \begin{warpHTML}

62.2 Book class commands

\mainmatter Declare the main matter section of the document. Does not reset the page number, which must be consecutive arabic numbers for the HTML conversion.

⚠

```
6262 \newbool{LWR@mainmatter}
6263 \DeclareDocumentCommand{\mainmatter}{}{%
6264 \booltrue{LWR@mainmatter}%
6265 }
```

\frontmatter Declare the front matter section of the document, using arabic numbering for the internal numbering. Does not reset the page number.

```
6266 \DeclareDocumentCommand{\frontmatter}{}{%
6267 \boolfalse{LWR@mainmatter}%
6268 }
```

\backmatter Declare the back matter section of the document. Does not reset the page number.

```
6269 \DeclareDocumentCommand{\backmatter}{}{%
6270 \boolfalse{LWR@mainmatter}%
6271 }
```

62.3 Sectioning support macros

\LWR@sectionnumber {*<section type>*}

Typeset a section number and its trailing space with css formatting:

```
6272 \newcommand*{\LWR@sectionnumber}[1]{%
6273 \InlineClass{sectionnumber}{#1}%
6274 }
```

autosec A tag used by the TOC and index.

\LWR@createautosec {*<section type>*}

Create an autosection tag.

```
6275 \newcommand*{\LWR@createautosec}[1]{%
6276 \LWR@htmlltag{%
6277     #1 % space
6278     id=\textquotedbl\LWR@print@mbox{autosec-\arabic{page}}\textquotedbl%
6279 }%
6280 }
```

\LWR@pushoneclose {*<section type>*} Stacks the new sectioning level's closing tag, to be used when this section is closed some time later.

⚠ \LWR@stoppars must be executed first.

```
6281 \NewDocumentCommand{\LWR@pushoneclose}{m}{%
6282 \LWR@traceinfo{\LWR@pushoneclose #1}%
6283     \LWR@pushclose{#1}%
6284 }
```

\LWR@startnewdepth {*<section type>*}

Closes currently stacked tags of a lesser level, then opens the new nesting level by saving this new sectioning level's closing tag for later use.

⚠ \LWR@stoppars must be executed first.

```
6285 \NewDocumentCommand{\LWR@startnewdepth}{m}{%
```

Close any stacked sections up to this new one.

6286 \LWR@closeprevious{#1}%

Push a new section depth:

6287 \LWR@pushoneclose{#1}%
6288 }

Ctr LWR@prevFileDepth Remembers the previous LWR@FileDepth.

Initialized to a deep level so that any section will trigger a new HTML page after the home page.

6289 \newcounter{LWR@prevFileDepth}
6290 \setcounter{LWR@prevFileDepth}{\LWR@depthsubparagraph}

\@secCntFormat {\<sectiontype>}

6291 \def\@secCntFormat#1{\csname the#1\endcsname\quad}

\simplechapterdelim Used by `tocbibind` and `anonchap`.

6292 \newcommand*\simplechapterdelim{}

\@chapCntFormat {\<sectiontype>}

\let to \@secCntFormat by default, but may be redefined by `\simplechapter` and `\restorechapter` from `tocbibind` or `anonchap`.

6293 \let\@chapCntFormat\@secCntFormat

\@partCntFormat {\<sectiontype>}

\let to \@secCntFormat by default, but may be redefined by `ctex`.

6294 \let\@partCntFormat\@secCntFormat

\@partNameFormat Prints “Part” for part sections.

Nullified by `ctex`.

6295 \newcommand*\@partNameFormat{\LWR@isolate{\partname}~}%

Ctr LWR@currentautosec Records the page number when the section was created. If a math expression is included in the section name, and SVG math is used, the corresponding `lateximage` will cause the page number to change by the time the following autosec label is created.

6296 \newcounter{LWR@currentautosec}
6297 \setcounter{LWR@currentautosec}{1}

```
\LWR@section * [<TOC name>] {<name>} {<sectiontype>}
```

The common actions for the high-level sectioning commands.

```
6298 \DeclareDocumentCommand{\LWR@section}{m m m m}{%
6299 \IfValueTF{#2}{%
6300   {\LWR@traceinfo{LWR@section: starting #4 #2}}%
6301   {\LWR@traceinfo{LWR@section: starting #4 #3}}%
6302 \LWR@maybeprintpendingfootnotes{\csuse{LWR@depth#4}}%
6303 \LWR@stoppars%
6304 \LWR@startnewdepth{#4}}
```

Cancel special `minipage` horizontal space interaction:

```
6305 \global\boolfalse{LWR@minipagethispar}%
```

Start a new HTML file unless starred, and if is a shallow sectioning depth.

Exception: Also start a new HTML file for `\part*`, for `appendix`.

Generate a new L^AT_EX page so that TOC and index page number points to the section:

```
6306 \LWR@traceinfo{LWR@section: testing whether to start a new HTML file}%
6307 \IfBooleanT{#1}{\LWR@traceinfo{LWR@section: starred}}%
6308 \ifbool{LWR@forcinghtmlpage}{\LWR@traceinfo{LWR@section: forcinghtmlpage}}{}%
6309 \ifthenelse{%
6310   \%
6311   \NOT\equal{#1}{\BooleanTrue}\OR%
6312   \cnttest{@nameuse{LWR@depth#4}}{=}{\LWR@depthpart}\OR%
6313   \boolean{LWR@forcinghtmlpage}\%
6314 }%
6315 \AND%
6316 \cnttest{@nameuse{LWR@depth#4}}{<=}{\value{FileDepth}}%
6317 \AND%
6318 \%
6319 \NOT\boolean{CombineHigherDepths}\OR%
6320 \cnttest{@nameuse{LWR@depth#4}}{<=}{\value{LWR@prevFileDepth}}%
6321 }%
6322 \AND%

6323 \%
6324 \phantomsection
6325 \NOT\isempty{#3}%
6326 \OR%
6327 \NOT\equal{#1}{\BooleanTrue}\%
6328 }%
```

If so: start a new HTML file:

```
6329 \% new file
6330 \LWR@traceinfo{LWR@section: new HTML file}%
```

See if there was an optional TOC name entry:

```

6331 \IfNoValueTF{#2}%
If no optional entry
6332 {\LWR@newhtmlfile{#3}}%
If yes an optional entry
6333 {\LWR@newhtmlfile{#2}}%
6334 }% new file

```

Else: No new HTML file:

```
6335 { % not new file
```

Generate a new L^AT_EX page so that TOC and index page number points to the section:

```

6336 \LWR@traceinfo{\LWR@section: not a new HTML file, about to \LWR@orignewpage}%
6337 \LWR@orignewpage%
6338 }% not new file
6339

```

Remember this section's name for \nameref:

```

6340 \IfValueT{#3}{%
6341   \LWR@traceinfo{\LWR@section: about to \LWR@setlatestname}%
6342   \IfValueTF{#2}{\LWR@setlatestname{#2}}{\LWR@setlatestname{#3}}%
6343 }%

```

Print an opening comment with the level and the name; ex: “section” “Introduction” Footnotes may be used in section names, which would also appear in the HTML section opening comments, so the short TOC entry is used if possible, and a limited opening comment is made if the sectional unit is starred.

```

6344 \ifbool{HTMLDebugComments}{%
6345   \begingroup%
6346   \LWR@nullfonts%
6347   \IfBooleanTF{#1}{starred}{%
6348     {\LWR@htmlcomment{Opening #4*}}%
6349   {%
6350     \IfNoValueTF{#2}{short TOC}{%
6351       {\LWR@htmlcomment{Opening #4 ‘#3’}}%
6352       {\LWR@htmlcomment{Opening #4 ‘#2’}}%
6353     }\LWR@orignewline%
6354   \endgroup%
6355 }{%

```

For inline sections paragraph and subparagraph, start a new paragraph now:

```

6356 \ifthenelse{%
6357   \cnttest{@nameuse{\LWR@depth#4}}{>=}{\LWR@depthparagraph}%
6358 }%
6359 {\LWR@startpars}%
6360 { }%

```

Create the opening tag with an autosec:

```
6361 \LWR@traceinfo{LWR@section: about to LWR@createautosec}%
6362 \LWR@createautosec{\@nameuse{LWR@tag#4}}%

6363 \setcounter{LWR@currentautosec}{\value{page}}%
```

Check if starred:

```
6364 \IfBooleanTF{#1}%
6365 {%
6366   \LWR@traceinfo{LWR@section: starred}%
}
```

Starred, but also forcing a toc entry, so add unnumbered toc name or regular name:

```
6367   \ifbool{LWR@forcinghtmltoc}%
6368   {%
6369     \addcontentsline{toc}{#4}{%
6370       \IfValueTF{#2}{\LWR@isolate{#2}}{\LWR@isolate{#3}}%
6371     }%
6372   }%
6373 {}%
6374 }% starred
```

Not starred, so step counter and add to toc:

```
6375 {}% not starred
```

Only add a numbered toc entry if section number is not too deep:

```
6376   \ifthenelse{%
6377     \cnttest{\@nameuse{LWR@depth#4}}{<=}{\value{secnumdepth}}}%
6378   {%
6379     {}% if secnumdepth
```

If in the main matter, step the counter and add the toc entry. For article class, lwarp assumes that all is mainmatter.

```
6380   \LWR@traceinfo{LWR@section: about to test main matter}%
6381   \ifbool{LWR@mainmatter}%
6382   {%
6383     \LWR@traceinfo{LWR@section: yes mainmatter}%
6384     \refstepcounter{#4}%
```

Add main matter numbered toc entry with the toc name or the regular name:

```
6385   \LWR@traceinfo{LWR@section: about to addcontentsline}%
6386   \addcontentsline{toc}{#4}{%
6387   {%
6388     \protect\numberline{%
6389       \@nameuse{pre#4name}}%
6390       \@nameuse{the#4}%
6391       \@nameuse{post#4name}}%
```

```

6392      }%
6393      {%
6394          \ignorespaces%
6395          \IfValueTF{#2}{\LWR@isolate{#2}}{\LWR@isolate{#3}}\protect\relax%
6396          }%
6397      }%
6398      \LWR@traceinfo{LWR@section: finished addcontentsline}%
6399  }% end of if main matter

```

If not main matter, add unnumbered TOC name or regular name:

```

6400      {%
6401          \not main matter
6402          \LWR@traceinfo{LWR@section: no main matter}%
6403          \addcontentsline{toc}{#4}{%
6404              \IfValueTF{#2}{\LWR@isolate{#2}}{\LWR@isolate{#3}}%
6405          }%
6406      }% end of not main matter
6407  }% end of secnumdepth

```

Deeper than secnumdepth, so add an unnumbered TOC entry:

```

6407      {%
6408          \addcontentsline{toc}{#4}{%
6409              \IfValueTF{#2}{\LWR@isolate{#2}}{\LWR@isolate{#3}}%
6410          }%
6411      }%

```

For part, print “Part”:

```

6412      \ifbool{LWR@mainmatter}{%
6413          {%
6414              \ifthenelse{%
6415                  \cnttest{@nameuse{LWR@depth#4}}{<=}{%
6416                      \value{secnumdepth}}}\ AND%
6417                  \cnttest{@nameuse{LWR@depth#4}}{=}{\LWR@depthpart}}{%
6418          }%
6419          {\@partnameformat}%
6420      }%

```

Print the section number:

```

6421      \LWR@traceinfo{LWR@section: about to print section number}%
6422      \ifthenelse{%
6423          \cnttest{@nameuse{LWR@depth#4}}{<=}{\value{secnumdepth}}}{%
6424      }%
6425      {%
6426          \ifstrequal{#4}{part}{%
6427              \protect\LWR@sectionnumber{@partcntformat{#4}}}%
6428          {%
6429              \ifstrequal{#4}{chapter}{%
6430                  \protect\LWR@sectionnumber{@chapcntformat{#4}}}%
6431                  \protect\LWR@sectionnumber{@seccntformat{#4}}}%
6432          }%
6433      }%
6434  }%

```

```

6435      \LWR@traceinfo{LWR@section: finished print section number}%
6436      }{ }%
6437 }% end of not starred

```

Print the section name:

```

6438 \LWR@traceinfo{LWR@section: about to print the section name}%
6439 \LWR@isolate{#3}%

```

Close the heading tag, such as /H2:

```

6440 \LWR@traceinfo{LWR@section: about to close the heading tag}%
6441 \LWR@htmlltag{@nameuse{LWR@tag#4end}}%
6442 \LWR@orignewline%

```

Generate a L^AT_EX label:

```

6443 \LWR@traceinfo{LWR@section: about to create the LaTeX label}%
6444 \setcounter{LWR@latestautopage}{\value{page}}%
6445 \LWR@newautopagelabel{LWR@currentautosec}\LWR@orignewline%

```

Start paragraph handing unless is an inline paragraph or subparagraph:

```

6446 \ifthenelse{%
6447   \cnttest{@nameuse{LWR@depth#4}}{<}{\LWR@depthparagraph}%
6448 }%
6449 { \LWR@startpars}%
6450 {}%

```

If not starred, remember the previous depth to possibly trigger a new HTML page.

HOWEVER, allow a \part* to start a new HTML page. This is used by appendix.

A starred section does not trigger a new HTML page at the beginning of this macro, so it should not affect it here at the end either. This became an issue when a \listoftables was tested in the middle of the document. The \chapter* for the list was not allowing a new HTML page for the section following it while CombineHigherDepths was true.

```

6451 \ifthenelse{%
6452   \NOT\equal{#1}{\BooleanTrue}\OR%
6453   \cnttest{@nameuse{LWR@depth#4}}{=}{\LWR@depthpart}%
6454 }%
6455 { % not starred
6456   \setcounter{LWR@prevFileDepth}{@nameuse{LWR@depth#4}}%
6457 }% not starred
6458 {}%

```

Reset to defaults if not a phantomsection:

```

6459 \ifstrempty{#3}%
6460 {}%
6461 {%
6462   \global\boolfalse{LWR@forcinghtmlpage}%
6463   \global\boolfalse{LWR@forcinghtmltoc}%

```

```

6464      }%
6465 %
6466 \LWR@traceinfo{LWR@section: done}%
6467 }

```

62.4 Pre- and post- sectioning names

\prebookname Usually null, but is used by `uj*` and `ut*` Japanese classes.
\postbookname

```

6468 \providecommand*\{\prebookname}{}%
6469 \providecommand*\{\postbookname}{}%

```

\prepartname Usually null, but is used by `uj*` and `ut*` Japanese classes.
\postpartname

```

6470 \providecommand*\{\prepartname}{}%
6471 \providecommand*\{\postpartname}{}%

```

\prechaptername Usually null, but is used by `uj*` and `ut*` Japanese classes.
\postchaptername

```

6472 \providecommand*\{\prechaptername}{}%
6473 \providecommand*\{\postchaptername}{}%

```

\presectionname Always null, but provided here for algorithmic simplicity in `\LWR@section`.
\postsectionname

```

6474 \providecommand*\{\presectionname}{}%
6475 \let\postsectionname\presectionname
6476
6477 \let\presubsectionname\presectionname
6478 \let\postsubsectionname\postsectionname
6479
6480 \let\presubsubsectionname\presectionname

6556 }
```

\theHTMLTitleSection Forms the HTML page's meta title tag. The default is to show the website title before the section name.

```
6557 \HTMLTitleBeforeSection
```

\theHTMLSection The section name is passed to \LWR@filestart, which then sets \theHTMLSection for use inside \theHTMLTitleSection to create an HTML meta title tag.

```
6558 \newcommand*{\theHTMLSection}{}%
6559 \end{warpall}
```

for HTML output: 6560 \begin{warpHTML}

\LWR@filestart [<sectionname>] Creates the opening HTML tags.

```
6561 \newcommand*{\LWR@filestart}[1][]{%
6562 \LWR@traceinfo{\LWR@filestart !#1!}%
```

Locally temporarily disable direct-formatting commands:

```
6563 \begingroup%
6564 \LWR@nullfonts%
```

Save the section name for use while creating the HTML meta title tag:

```
6565 \edef\theHTMLSection{#1}%
```

Create the page's HTML header:

```
6566 \LWR@htmltag{!DOCTYPE html}\LWR@orignewline
```

The language is user-adjustable:

```
6567 \LWR@htmltag{%
6568     html lang=\LWR@orig@textquotedbl\LWR@currentHTMLLanguage\LWR@orig@textquotedbl%
6569 }\LWR@orignewline
```

Start of the meta data:

```
6570 \LWR@htmltag{head}\LWR@orignewline
```

Charset is fixed at UTF-8:

```
6571 \LWR@htmltag{%
6572     meta charset=\LWR@orig@textquotedbl{}UTF-8\LWR@orig@textquotedbl\ /%
6573 }\LWR@orignewline
```

Author:

```
6574 \ifthenelse{\equal{\theHTMLAuthor}{}}{%
6575     {}%
6576     {%
6577         \LWR@htmltag{%
6578             meta name=\LWR@orig@textquotedbl{}author\LWR@orig@textquotedbl\ % space
6579             content=\LWR@orig@textquotedbl{}\theHTMLAuthor\LWR@orig@textquotedbl\ /%
6580         }\LWR@orignewline%
6581     }%
```

lwarp is the generator:

```
6582 \LWR@htmltag{%
6583     meta % space
6584     name=\LWR@orig@textquotedbl{}generator\LWR@orig@textquotedbl\ % space
6585     content=\LWR@orig@textquotedbl{}LaTeX lwarp package\LWR@orig@textquotedbl\ /%
6586 }\LWR@orignewline%
```

If there is a description, add it now:

```
6587 \ifdefempty{\LWR@currentHTMLDescription}{%
6588     \LWR@htmltag{%
6589         meta name=\LWR@orig@textquotedbl{}description\LWR@orig@textquotedbl\ % space
6590         content=\LWR@orig@textquotedbl{}\LWR@currentHTMLDescription\LWR@orig@textquotedbl\ /%
6591     }\LWR@orignewline%
6592 }%
```

Mobile-friendly viewport:

```
6593 \LWR@htmltag{%
6594     meta % space
6595     name=\LWR@orig@textquotedbl{}viewport\LWR@orig@textquotedbl\ % space
6596     content=\LWR@orig@textquotedbl{}width=device-width, initial-scale=1.0\LWR@orig@textquotedbl\ /%
6597 }\LWR@orignewline
```

IE patch:

```
6598 \LWR@htmltag{!-\/-[if lt IE 9]}\LWR@orignewline
6599 \LWR@htmltag{%
6600     script % space

6603     \LWR@orig@textquotedbl%
6604 }%
6605 \LWR@htmltag{/script}\LWR@orignewline
6606 \LWR@htmltag{![endif]-\/-}\LWR@orignewline
```

The page's title, if there is one. A section name is also added if given.

```
6607 \ifthenelse{\equal{\theHTMLTitle}{}}%
6608     {}%
6609     {%
6610         \LWR@htmltag{title}%
6611         \ifdefempty{\theHTMLSection}%
6612             {\theHTMLTitle}%
6613             {\theHTMLTitleSection}%
6614         \LWR@htmltag{/title}\LWR@orignewline%
6615     }%
```

The page's stylesheet:

```
6616 \LWR@htmltag{%
6617     link % space
6618     rel=\LWR@orig@textquotedbl{}stylesheet\LWR@orig@textquotedbl\ % space
6619     type=\LWR@orig@textquotedbl{}text/css\LWR@orig@textquotedbl\ % space
6620     href=\LWR@orig@textquotedbl\LWR@currentcss\LWR@orig@textquotedbl\ /%
6621 }%
6622 \LWR@orignewline
```

Optional MATHJAX support. The `HTML` tags must be turned off during the verbatim input, and the paragraph handling which was turned on at the end of verbatim input must be immediately turned off again.

```
6623 \ifbool{mathjax}%
6624 {%
6625     \begingroup%
6626     \LWR@restoreoriglists%
6627     \boolfalse{\LWR@verbtags}%

6628         \verbatiminput{\LWR@mathjaxfilename}%

6629     \booltrue{\LWR@verbtags}%
6630     \endgroup%
6631     \LWR@stopars%
6632 }% end of mathjax
6633 { }%
```

End of the header:

```
6634 \LWR@htmltag{/head}\LWR@orignewline
```

Start of the body:

```
6635 \LWR@htmltag{body}\LWR@orignewline
6636 \endgroup
6637 \LWR@traceinfo{\LWR@filestart: done}
6638 }

6639 \end{warpHTML}
```

64 Starting HTML output

for HTML output: 6640 \begin{warpHTML}

\LWR@LwarpStart Executed at the beginning of the entire document.

The use of \textquotedbl instead of " improves compatibility with xeCJK.

```
6641 \catcode`\$=\active
6642 \newcommand*\LWR@LwarpStart{%
6643 {%
6644 \LWR@traceinfo{\LWR@l warpStart}}
```

If formatting for a word processor, force filedepth to single-file only, force HTML debug comments off.

```
6645 \ifbool{FormatWP}{%
6646   \setcounter{FileDepth}{-5}%
6647   \boolfalse{HTMLDebugComments}}%
6648 }{}}
```

Expand and detokenize \HomeHTMLFilename and \HTMLFilename:

```
6649 \edef\LWR@strresult{\HomeHTMLFilename}
6650 \edef\HomeHTMLFilename{\detokenize\expandafter{\LWR@strresult}}
6651 \edef\LWR@strresult{\HTMLFilename}
6652 \edef\HTMLFilename{\detokenize\expandafter{\LWR@strresult}}
```

Force onecolumn and empty page style:

```
6653 \LWR@origonecolumn%
6654 \LWR@origpagestyle{empty}%
```

No black box for overfull lines:

```
6655 \overfullrule=0pt
```

Reduce chance of line overflow when HTML tags are added:

```
6656 \LWR@print@footnotesize%
```

In PDF output, don't allow line breaks to interfere with HTML tags:

```
6657 \LWR@print@raggedright%
6658 \LetLtxMacro{\\"}{\LWR@endofline}%
```

Spread the lines for *pdftotext* to read them well:

```
6659 \linespread{1.3}%
```

For *pdftotext* to reliably identify paragraph splits:

```
6660 \setlength{\parindent}{0pt}
6661 \setlength{\parskip}{2ex}
```

For the `\teximage` record file:

```
6662 \immediate\openout\LWR@teximagesfile=\BaseJobname-images.txt
```

Removes space around the caption in the HTML:

```
6663 \setlength{\belowcaptionskip}{0ex}
6664 \setlength{\abovecaptionskip}{0ex}
```

Redefine the plain page style to be empty when used by index pages:

```
6665 \renewcommand{\ps@plain}{}%
```

Plug in some new actions. This is done just before the document start so that they won't be over-written by some other package.

Float captions:

```
6666 \let\LWR@origcaption\caption
```

Labels: `\ltx@label` is used in `amsmath` environments and is also patched by `cleveref`.

[Label in HTML](#)

```
6667 \let\LWR@origltx@label\ltx@label
6668 \let\ltx@label\LWR@htmlmathlabel
```

Not yet started any paragraph handling:

```
6669 \global\boolfalse{LWR@doingapar}
6670 \global\boolfalse{LWR@doingstartpars}
```

Document and page settings:

```
6671 \mainmatter
6672 \LWR@origpagenumbering{arabic}
```

Start a new HTML file and a header:

```
6673 \LWR@traceinfo{LWR@lwarpStart: Starting new file.}
6674 \LWR@filestart
6675 \LWR@traceinfo{LWR@lwarpStart: Generating first header.}
```

```
6676 \ifdefempty{\LWR@firstpagetop}{%
6677   \LWR@htmlltag{header}\LWR@orignewline
6678   \LWR@startpars
6679   \LWR@firstpagetop
6680   \LWR@stoppars
6681   \LWR@htmlltag{/header}\LWR@orignewline
6682 }%
```

```
6683 \LWR@htmlelementclass{div}{bodywithoutsidetoc}
6684 \LWR@htmlelementclass{div}{bodycontainer}
6685 \LWR@traceinfo{\LWR@lwarpStart: Generating textbody.}
6686 \LWR@htmlelementclass{section}{textbody}
```

Patch the `itemize`, `enumerate`, and `description` environments and `\item`. This works with the native L^AT_EX environments, as well as those provided by `enumitem`, `enumerate`, and `paralist`.

```
6687 \LWR@patchlists
```

Ensure that math mode is active to call `lwarp`'s patches:

```
6688 \catcode`\$=\active
```

Required for `\nameref` to work with SVG math:

```
6689 \immediate\write\@mainaux{\catcode`\string$\active}%
6690 \LetLtxMacro{\LWR@syntaxhighlightone$}{\balance} for editor syntax highlighting
```

Allow HTML paragraphs to begin:

```
6691 \LWR@startpars
```

If using MATHJAX, disable `\ensuremath` by printing a nullified definition at the start of each file, and add further customizations:

```
6692 \LWR@customizeMathJax
```

First autopage label in case a figure occurs early.

```
6693 \setcounter{\LWR@latestautopage}{\value{page}}%
6694 \LWR@newautopagelabel{\LWR@currentautosec}%

6695 \LWR@traceinfo{\LWR@lwarpStart: done}
6696 }
6697 \catcode`\$=3% math shift until lwarp starts

6698 \end{warpHTML}
```

65 Ending HTML output

for HTML output: 6699 `\begin{warpHTML}`

`\LWR@requesttoc {<boolean>} {<suffix>}` Requests that a TOC, LOF, or LOTbe generated.

```
6700 \newcommand*{\LWR@requesttoc}[2]{%
6701 \ifbool{\#1}{%
6702 {
```

```

6703      \expandafter\newwrite\@nameuse{tf@#2}
6704      \immediate\openout \@nameuse{tf@#2} \jobname.\#2\relax
6705 }{}
6706 }

```

\LWR@LwarpEnd Final stop of all HTML output:

```

6707 \newcommand*\LWR@LwarpEnd{%
6708 {
6709 \LWR@stopars
6710 \LWR@closeprevious{finished}

```

At the bottom of the ending file:

Close the textbody:

```

6711 \LWR@htmlelementclassend{section}{textbody}
6712 \LWR@htmlelementclassend{div}{bodycontainer}
6713 \LWR@htmlelementclassend{div}{bodyandsidetoc}

```

Print any pending footnotes:

```

6714 \LWR@printpendingfootnotes

```

Create the footer:

```

6715 \ifdefempty{\LWR@pagebottom}{}{%
6716   \LWR@htmlelement{footer}
6717
6718   \LWR@pagebottom
6719
6720   \LWR@htmlelementend{footer}
6721 }

```

No bottom navigation if are finishing the home page, or if formatting for an EPUB or word processor.

Presumably has a table-of-contents.

```

6722 \ifthenelse{\boolean{FormatEPUB}\OR\boolean{FormatWP}}{%
6723   {}
6724   {
6725     \ifnumcomp{\value{LWR@htmlfilename}}{>}{0}{\LWR@botnavigation}{}
6726   }
6727 \LWR@stopars% final stop of all paragraphs

```

Finish the HTML file:

```

6728 \LWR@htmlltag{/body}\LWR@orignewline
6729 \LWR@htmlltag{/html}\LWR@orignewline

```

Seems to be required sometimes:

```

6730 \LWR@orignewpage
6731 }

\enddocument If labels have not changed, mark successful completion of the lateximages file. Executed as everything is being shut down.

6732 \xpatchcmd{\enddocument}
6733 {%
6734     \if@tempswa
6735         \@latex@warning@no@line{Label(s) may have changed.
6736         Rerun to get cross-references right}%
6737     \fi
6738 }
6739 {%
6740     \if@tempswa
6741         \@latex@warning@no@line{Label(s) may have changed.
6742         Rerun to get cross-references right}%
6743     \else
6744         \immediate\write\LWR@lateximagesfile{%
6745             |end|end|end|%
6746         }%
6747     \fi
6748 }
6749 {}
6750 {
6751     \PackageWarningNoLine{lwarp}
6752 {%

6757     or the images may be corrupt%
6758 }
6759 }

6760 \end{warpHTML}

```

66 Title page

package support **⚠ load order** lwarp supports the native LATEX titling commands, and also supports the packages authblk and titling. If both are used, authblk should be loaded before titling.

\published and \subtitle If using the titling package, additional titlepage fields for \published and \subtitle may be added by using \AddSubtitlePublished in the preamble. See section 66.8.

affiliation lwarp provides for the \author macro an additional \affiliation macro to provide an affiliation and other additional information for each author in the title page. The affiliation information is removed when using titlingpage's \theauthor in the main text.

reusing titlepage information

⚠ \theauthor, authblk

The `titling` package maintains the definitions of `\thetitle`, `\theauthor`, etc., after the title has been typeset. These commands are to be used to refer to the document's title and author, etc., in the main text. These definitions have the `\thanks` and `\affiliation` removed, and for `\author` the `\and` is replaced to generate a simple inline list of authors separated by commas. Note: `\theauthor` does not work well with `authblk` unless the traditional L^AT_EX syntax is used.

custom titlepages

`\printtitle`, `\printauthor`, etc., are provided for use inside a custom `titlepage` or `titlingpage` environment, and these retain the `\thanks` and `\affiliation`.

`\printthanks` `\printthanks` has been added to force the printing of thanks inside a `titlingpage` environment when `\maketitle` is not used.

⚠ \thanks

Inside a `\titlepage` or `\titlingpage` environment, use `\thanks` instead of `\footnote` for acknowledgements, etc.

66.1 Setting the title, etc.

The following provide setting commands for both HTML and print outputs.

`\author`
`\and`

`{<author>}` While using `\maketitle` and print mode, the author is treated as a single-column tabular and the `\and` feature finishes the current tabular then starts a new one for the next author. Each author thus is placed into its own tabular, and an affiliation may be placed on its own line such as

```
\author{Name \\ Affiliation \and Second Name \\ Second Affiliation}
```

For HTML, the entire author block is placed inside a `<div>` of class `author`, and each individual author is inside a `<div>` of class `oneauthor`.

`\@title`
`\@author`
`\@date`

`\@title`, `\@author`, and `\@date` store the values as originally assigned, including any `\thanks`, `\and`, or `\affiliation`. These are low-level macros intended to be used by other macros only inside a `titlepage` or `titlingpage`, and are used by `\maketitle`. The author is printed inside a single-column tabular, which becomes multiple single-column tabulars if multiples authors are included. For HTML, these tabulars become side-by-side `<div>`s of class `oneauthor`, all of which are combined into one `<div>` of class `author`.

`\printtitle`
`\printauthor`
`\printdate`

`\printtitle`, etc. are user-level macros intended to be used in custom `titlepage` or `titlingpage` environments in cases where `\maketitle` is not desired. These commands preserve the `\thanks`, etc., and should not be used in the main text.

`\thetitle`
`\theauthor`
`\thedate`
`\HTMLPageBottom`

`\thetitle`, `\theauthor`, and `\thedate` are available if `titling` has been loaded, and are sanitized user-level versions from which have been removed the `\thanks` and `\affiliation`, and `\and` is changed for inline text usage. The author is printed inline without `\affiliation` or `\thanks`, with `\and` placing commas between multiple authors. Thus, these commands are to be used in the main text whenever the user wishes to refer to the document's title and such. One practical use for this is to place the authors at the bottom of each HTML page, such as:

```
\HTMLPageBottom{
\begin{center}\textcopyright~20xx \theauthor\end{center}}
```

}

⚠ `\theauthor, authblk` `\theauthor` does not work well if `authblk` is used. If `\theauthor` is important, it is recommended to use the standard L^AT_EX syntax for `\author`, optionally with `lwarp`'s `\affiliation` macro as well.

⚠ `affiliations` After `\maketitle` has completed, `\theauthor` retains the definition of the author, but `\and` is changed to become a comma and a space, intending to print the authors names separated by spaces. This fails when affiliations are included on their own table rows.

`\affiliation` A solution, provide here, is to define a macro `\affiliation` which, during `\maketitle`, starts a new row and adds the affiliation, but after `\maketitle` is finished `\affiliation` is re-defined to discard its argument, thus printing only the author names when `\author` is later used inline.

66.2 `\if@titlepage`

for HTML & PRINT: 6761 `\begin{warpall}`

`\if@titlepage` Some classes do not provide `\if@titlepage`. In this case, provide it and force it false.

```
6762 \ifcsvoid{@titlepagefalse}{  
6763     \newif\if@titlepage  
6764     \if@titlepagefalse  
6765 }{}
```

6766 `\end{warpall}`

66.3 Changes for `\affiliation`

`\affiliation` `{<text>}`

Adds the affiliation to the author for use in `\maketitle`.

Inside `titlepage`, this macro prints its argument. Outside, it is null.

for HTML & PRINT: 6767 `\begin{warpall}`
6768 `\providerobustcmd{\affiliation}[1]{}`
6769 `\end{warpall}`

for PRINT output: 6770 `\begin{warpprint}`

```
6771 \AtBeginEnvironment{titlepage}{  
6772 \renewrobustcmd{\affiliation}[1]{\textsc{\small#1}}}  
6773 }  
6774  
6775 \AtBeginDocument{  
6776 \@ifpackageloaded{titling}{  
6777 \AtBeginEnvironment{titlingpage}{
```

```

6778 \renewrobustcmd{\affiliation}[1]{\textsc{\small#1}}
6779 }
6780 }{}% titling loaded
6781 }% AtBeginDocument

6782 \end{warpprint}

```

for HTML output: 6783 \begin{warpHTML}

Env titlepage Sets up a <div> of class titlepage. Provided even for memoir class, since it is used by \maketitle.

```

6784 \DeclareDocumentEnvironment{titlepage} {}
6785 {
6786 \renewrobustcmd{\affiliation}[1]{\InlineClass{affiliation}{##1}}
6787 \LWR@printpendingfootnotes
6788 \LWR@forcenewpage
6789 \BlockClass{titlepage}
6790 }
6791 {
6792 \endBlockClass
6793 \LWR@printpendingfootnotes
6794 }

6795 \end{warpHTML}

```

66.4 Printing the thanks

for HTML & PRINT: 6796 \begin{warpall}

\printthanks Forces the \thanks to be printed.

This is necessary in a titlingpage environment when \maketitle was not used.

```

6797 \newcommand*{\printthanks}{\LWR@stoppars@\thanks\LWR@startpars}

6798 \end{warpall}

```

66.5 Printing the title, etc. in HTML

The following are for printing the title, etc. in a titlepage or a titlingpage in HTML:

for HTML output: 6799 \begin{warpHTML}

```

\printtitle

6800 \newcommand*{\printtitle}{%
6801   \LWR@stoppars%
6802   \LWR@startpars%

```

```
6803   \LWR@htmlltag{\LWR@tagtitle}%
6804   \@title%
6805   \LWR@htmlltag{\LWR@tagtitleend}%
6806   \LWR@startpars%
6807 }
```

\LWR@printthetitle A private version which prints the title without footnotes, used to title each HTML page.

```
6808 \newcommand*\LWR@printthetitle{%
6809 {%
6810   \LWR@stoppars%
6811   \LWR@htmlltag{\LWR@tagtitle}%
6812   \thetitle%
6813   \LWR@htmlltag{\LWR@tagtitleend}%
6814   \LWR@startpars%
6815 }
```

\printauthor HTML version.

```
6816 \newcommand*\printauthor{
```

The entire author block is contained in a <div> named author:

```
6817 \begin{BlockClass}{author}
```

\and finishes one author and starts the next:

```
6818 \renewcommand{\and}{%
6819 \end{BlockClass}%
6820 \begin{BlockClass}{oneauthor}%
6821 }
```

Individual authors are contained in a <div> named oneauthor:

```
6822 \begin{BlockClass}{oneauthor}
6823 \@author
6824 \end{BlockClass}
6825 \end{BlockClass}
6826 }
```

\printdate

```
6827 \newcommand*\printdate{%
6828 \begin{BlockClass}{titledate}
6829 \@date
6830 \end{BlockClass}
6831 }

6832 \end{warpHTML}
```

66.6 Printing the title, etc. in print form

The following are for printing the title, etc. in a `titlepage` or a `titlingpage` in print form:

for PRINT output: 6833 `\begin{warpprint}`

`\printtitle`

6834 `\newcommand*{\printtitle}{{\Huge \@title}}`

`\printauthor` Print mode.

6835 `\newcommand*{\printauthor}{`

6836 `\{\large\begin{tabular}[t]{c}\@author\end{tabular}\}}`

`\printdate`

6837 `\newcommand*{\printdate}{{\small \textit{\@date}}}`

6838 `\end{warpprint}`

66.7 \maketitle for HTML output

An HTML `<div>` of class `titlepage` is used.

`\thanks` are a form of footnotes used in the title page. See section 59 for other kinds of footnotes.

See `\thanksmarkseries{series}`, below, to set the style of the footnote marks.

for HTML output: 6839 `\begin{warpHTML}`

6840 `@ifclassloaded{memoir}`

6841 `{`

6842 `\newcommand{\LWR@setfootnoteseries}{%`

6843 `\renewcommand{\thefootnote}{\@arabic\c@footnote}%`

6844 `}`

6845 `}% not memoir`

6846 `\if@titlepage`

6847 `\newcommand{\LWR@setfootnoteseries}{%`

6848 `\renewcommand{\thefootnote}{\@arabic\c@footnote}%`

6849 `}`

6850 `\else`

6851 `\newcommand{\LWR@setfootnoteseries}{%`

6852 `\renewcommand{\thefootnote}{\@fnsymbol\c@footnote}%`

6853 `}`

6854 `\fi`

6855 `}% not memoir`

\LWR@maketitlesetup Patches \thanks macros.

6856 \newcommand*\LWR@maketitlesetup{%

Redefine the footnote mark:

6857 \LWR@setfootnoteseries%
6858 \def\@makefnmark{\thefootnote}

\thefootnote \Rightarrow \nameuse{arabic}{footnote}, or
\thefootnote \Rightarrow \nameuse{fnsymbol}{footnote}

Redefine the footnote text:

6859 \long\def\@makefntext##1{%

Make the footnote mark and some extra horizontal space for the tags:

6860 \@thefnmark~%

\makethanksmark \Rightarrow \thanksfootmark \Rightarrow \tmark \Rightarrow
\@thefnmark \Rightarrow \itshape a (or similar)

Print the text:

6861 ##1%
6862 }%
6863 }

\@fnsymbol {\langle counter\rangle}

Re-defined to use an HTML entity for the double vertical bar symbol. The original definition used \| which was not being seen by *pdftotext*.

6864 \def\fnsymbol#1{\ifcase#1\or *\or \HTMLentity{dagger}\or \HTMLentity{Dagger}\or
6865 \HTMLentity{sect}\or \HTMLentity{para}\or \text{\HTMLunicode{2016}}\or
6866 **\or \HTMLentity{dagger}\HTMLentity{dagger} \or
6867 \HTMLentity{Dagger}\HTMLentity{Dagger} \else\@ctrerr\fi}

\maketitle HTML mode. Creates an HTML titlepage div and typesets the title, etc.

Code from the *titling* package is adapted, simplified, and modified for HTML output.

6868 \renewcommand*\maketitle{%

An HTML titlepage <div> is used for all classes.

6869 \begin{titlepage}

Set up special patches:

```
6870 \LWR@maketitlesetup
```

Typeset the title, etc:

```
6871 \@maketitle
```

Immediately generate any \thanks footnotes:

```
6872 \LWR@stopars \@thanks \LWR@startpars
```

Close the HTML titlepage div and cleanup:

```
6873 \end{titlepage}
6874 \setcounter{footnote}{0}%
6875 \global\let\thanks\relax
6876 \global\let\maketitle\relax
6877 \global\let@\maketitle\relax
6878 \global\let@\thanks\empty
6879 \global\let@\author\empty
6880 \global\let@\date\empty
6881 \global\let@\title\empty
6882 \global\let\title\relax
6883 \global\let\author\relax
6884 \global\let\date\relax
6885 \global\let\and\relax
6886 }
```

\@maketitle HTML mode. Typesets the title, etc.:

```
6887 \DeclareDocumentCommand{\@maketitle}{}{%
6888   \LWR@stopars%
6889   \LWR@htmlltag{\LWR@tagtitle}%
6890   \@title%
6891   \LWR@htmlltag{\LWR@tagtitleend}%
6892   \LWR@startpars%
6893   \begin{BlockClass}{author}%
```

For **IEEEtran** class:

```
6894   \renewcommand*\{\cr\}{}%
6895   \renewcommand*\{\crr\}{}%
6896   \renewcommand*\{\noalign\}{}%
6897   \renewcommand{\and}{%
6898     \end{BlockClass}%
6899     \begin{BlockClass}{oneauthor}%
6900   }%
6901   \begin{BlockClass}{oneauthor}%
6902     \@author%
6903     \end{BlockClass}%
6904   \end{BlockClass}%
6905 }
```

```
6905 \begin{BlockClass}{titledate}%
6906   \@date%
6907 \end{BlockClass}%
6908 }
```

\LWR@titlingmaketitle \maketitle for use inside an HTML titlingpage environment.

```
6909 \newcommand*{\LWR@titlingmaketitle}{%
```

Keep pending footnotes out of the title block:

```
6910 \LWR@stoppars \@thanks \LWR@startpars
```

Set up special patches:

```
6911 \LWR@maketitlesetup
```

Typeset the title, etc:

```
6912 \@maketitle
```

Immediately generate any \thanks footnotes:

```
6913 \LWR@stoppars \@thanks \LWR@startpars
6914 }
```

```
6915 \end{warpHTML}
```

66.8 \published and \subtitle

\subtitle and \published To add \subtitle and \published to the titlepage, load the `titling` package and use `\AddSubtitlePublished` in the preamble.

The default `lwarp.css` has definitions for the `published` and `subtitle` classes.

If `titling` is loaded, `\AddSubtitlePublished` creates a number of additional macros, and also assigns some of the `titling` hooks. If `titling` is not loaded, `\AddSubtitlePublished` creates null macros.

 **titling hooks** Do not use `\AddSubtitlePublished` if the user has patched the `titling` hooks for some other reason. Portions are marked `\warpprintonly` to reduce extra tags in `HTML`. Similarly, `BlockClass` has no effect in print mode. Thus, the following may be marked `warpall`.

for HTML & PRINT: 6916 \begin{warpall}

\AddSubtitlePublished Adds \published and \subtitle, and related.

```
6917 \newcommand*{\AddSubtitlePublished}{%
6918 \@ifpackageloaded{titling}{% yes titling package}
```

```

6919  \newcommand{\@published}{}%
6920  \newcommand{\published}[1]{\gdef\@published{##1}}%
6921  \renewcommand*{\maketitlehooka}{\printpublished}%
6922  \newcommand*{\printpublished}{}%
6923      \warpprintonly{\begin{center}\unskip}%
6924      \begin{BlockClass}{published}%
6925          \warpprintonly{\large\itshape}%
6926          \@published%
6927          \end{BlockClass}%
6928          \warpprintonly{\end{center}}%
6929      }%
6930  \newcommand{\@subtitle}{}%
6931  \newcommand{\subtitle}[1]{\gdef\@subtitle{##1}}%
6932  \renewcommand*{\maketitlehookb}{\printsubtitle}%
6933  \newcommand*{\printsubtitle}{}%
6934      \warpprintonly{\begin{center}\unskip}%
6935      \begin{BlockClass}{subtitle}%
6936          \warpprintonly{\Large\itshape}%
6937          \@subtitle%
6938          \end{BlockClass}%
6939          \warpprintonly{\end{center}}%
6940      }%
6941 }% yes titling package
6942 {%- no titling package
6943     \newcommand{\published}[1]{}%
6944     \newcommand*{\printpublished}{}%
6945     \newcommand{\subtitle}{}%
6946     \newcommand*{\printsubtitle}{}%
6947 }% no titling package
6948 }% \AddSubtitlePublished

6949 \end{warpall}

```

67 Abstract

The following code replaces the L^AT_EX default, and will itself be replaced later if the `abstract` package is loaded.

for HTML output: 6950 `\begin{warpHTML}`

`\abstractname` User-redefinable title for the abstract.

Also over-written by the `babel` package.

```
6951 \providecommand*{\abstractname}{Abstract}
```

Some classes allow an optional name, so it is allowed here.

`Env abstract`

```
6952 \DeclareDocumentEnvironment{abstract}{O{\abstractname}}
```

```

6953 {
6954 \LWR@forcenewpage
6955 \BlockClass{abstract}
6956 \BlockClassSingle{abstracttitle}{#1}
6957 }
6958 {
6959 \endBlockClass
6960 }

6961 \end{warpHTML}

```

68 Quote and verse

68.1 Attributions

\attribution {\langle name\rangle}

For use with quote, quotation, verse:

Ex: "A quotation." \attribution{\textsc{Author Name}\\\textsl{Book Title}}

for HTML output: 6962 \begin{warpHTML}
6963 \newcommand{\attribution}[1]{%
6964 \LWR@stoppars%
6965 \begin{BlockClass}{attribution}
6966 #1
6967 \end{BlockClass}
6968 \LWR@startpars%
6969 }
6970 \end{warpHTML}

for PRINT output: 6971 \begin{warpprint}
6972 \newcommand{\attribution}[1]{
6973 \begin{flushright}
6974 \unskip
6975 #1
6976 \end{flushright}%
6977 }
6978 \end{warpprint}

68.2 Quotes, quotations

for HTML output: 6979 \begin{warpHTML}

Env quote

```

6980 \renewenvironment*{quote}
6981 {
6982     \LWR@forcenewpage

```

```

6983     \LWR@htmlblocktag{blockquote}
6984 }
6985 {\LWR@htmlblocktag{/blockquote}}
```

Env quotation

```

6986 \renewenvironment*{quotation}
6987 {
6988     \LWR@forcenewpage
6989     \LWR@htmlblocktag{blockquote}
6990 }
6991 {\LWR@htmlblocktag{/blockquote}}
```

```
6992 \end{warpHTML}
```

68.3 Verse

When using `verse` or `memoir`, always place a `\\"` after each line.

- \attrib** The documentation for the `verse` and `memoir` packages suggest defining an `\attrib` command, which may already exist in current documents, but it will only work for print output. `lwarp` provides `\attribution`, which works for both print and `HTML` output. To combine the two so that `\attrib` is used for print and `\attribution` is used for `HTML`:

```

\begin{warpHTML}
\let\attrib\attribution
\end{warpHTML}
```

- Len \vleftskip** These lengths are used by `verse` and `memoir` to control the left margin, and they may already be set by the user for print output. New lengths `\HTMLvleftskip` and `\HTMLleftmargini` are provided to control the margins in `HTML` output. These new lengths may be set by the user before any `verse` environment, and persist until they are manually changed again. One reason to change `\HTMLleftmargini` is if there is a wide `\flagverse` in use, such as the word “Chorus”, in which case the value of `\HTMLleftmargini` should be set to a wide enough length to contain “Chorus”. The default is wide enough for a stanza number.

- ⚠ spacing** Horizontal spacing relies on `pdftotext`’s ability to discern the layout (`-layout` option) of the text in the `HTML`-tagged PDF output. For some settings of `\HTMLleftmargini` or `\HTMLleftskip` the horizontal alignment may not work out exactly, in which case a label may be shifted by one space.

68.3.1 L^AT_EX core verse environment

for HTML output: 6993 `\begin{warpHTML}`

Env `verse`

```

6994 \renewenvironment{verse}
6995     {\let\\newline\l warp
6996      \list{}{\itemsep     \z@
6997          \itemindent -1.5em%
6998          \listparindent\itemindent
6999          \rightmargin \leftmargin
7000          \advance\leftmargin 1.5em}%
7001          \item\relax}
7002      {\endlist}

7003 \end{warpHTML}

```

for HTML & PRINT: 7004 \begin{warpall}

68.3.2 verse and memoir

The following lengths are used by `verse` and `memoir`. They may be set in either print or HTML output, but are only used in HTML. This allows the user to set `\vleftskip` and `\leftmargini` for print output, and optionally select different values for HTML.

Len `\HTMLvleftskip` Sets `\vleftskip` inside a `verse` environment in HTML.

```

7005 \newlength{\HTMLvleftskip}
7006 \setlength{\HTMLvleftskip}{1em}

```

Len `\HTMLleftmargini` Sets `\leftmargini` inside a `verse` environment in HTML.

```

7007 \newlength{\HTMLleftmargini}
7008 \setlength{\HTMLleftmargini}{4.5em}

```

```
7009 \end{warpall}
```

69 Verbatim and tabbing

for HTML & PRINT: 7010 \begin{warpall}

Len `\VerbatimHTMLWidth` Width to use in HTML `Verbatim` environment.

This width is used when placing line numbers to the right. Ignored during print output.

```

7011 \newlength{\VerbatimHTMLWidth}
7012 \setlength{\VerbatimHTMLWidth}{4in}
7013 \end{warpall}

```

for HTML output: 7014 \begin{warpHTML}

Bool `LWR@verbtags` Used to temporarily turn off verbatim tags while doing `\verbatiminput` in the HTML head.

```

7015 \newbool{LWR@verbtags}
7016 \booltrue{LWR@verbtags}

```

```
\LWR@atbeginverbatim [<1: style>] {<2: negative \baselineskip \vspace>} {<3: class>}
```

Encloses a verbatim environment with the given css class.

The use of \textquotedbl instead of " improves compatibility with xeCJK.

```
7017 \newcommand*{\LWR@atbeginverbatim}[3][]%
7018 {%
```

Avoid excessive space between lines:

```
7019 \setlength{\parskip}{0ex} %
```

Stop generating HTML paragraph tags:

```
7020 \LWR@stoppars%
```

Create a new pre of the given class. The tags may temporarily be turned off for internal use, such as loading the MATHJAX script.

```
7021 \ifbool{\LWR@verbtags}{%
7022     \LWR@htmltag{pre class=\textquotedbl#3\textquotedbl%
7023         \ifthenelse{\equal{\#1}{}}{}{ style=\textquotedbl#1\textquotedbl}%
7024     }%
7025     \LWR@newline% pre
7026     \leavevmode\unskip\LWR@print@\vspace*{-\#2\baselineskip}%
7027 }{}}
```

Use a mono-spaced font to preserve horizontal positioning. If horizontal alignment is important for the user, use a mono-spaced font in the css for the verse class.

```
7028 \begingroup%
```

```
7029 % \LWR@print@normalsize%
7030 \LWR@origttfamily%
7031 \LWR@print@small%
```

Since inside a <pre>, restore the original list processing:

```
7032 \LWR@restoreoriglists%
```

Turn off babel-french extra space before punctuation:

```
7033 \LWR@FBcancel%
```

Do not produce HTML tags for \hspace inside a verse par. Restore plain L^AT_EX \hspace functionality:

```
7034 \LWR@select@print@hspace%
7035 }
```

```
\LWR@afterendverbatim {<negative \baselineskip \vspace>}
```

Finishes enclosing a verbatim environment.

```
7036 \newcommand*{\LWR@afterendverbatim}[1]{%
7037 \endgroup%
7038 \par%
```

At the end of the environment, close the pre:

```
7039 \ifbool{\LWR@verbtags}{%
7040     \LWR@print@vspace*{-\baselineskip}%
7041     \noindent\LWR@htmltag{/pre}\LWR@newline% pre
7042 }{}}
```

Resume regular paragraph handling:

```
7043 \LWR@startpars%
7044 }
```

\verbatiminput {<filename>}

Patch \verbatiminput to add HTML tags:

```
7045 \let\LWRV@origverbatim@input\verbatim@input
7046
7047 \renewcommand{\verbatim@input}[2]{%
7048 \ifbool{\LWR@verbtags}{\LWR@forcenewpage}{%
7049 \LWR@atbeginverbatim{2.5}{Verbatim}%
7050 \LWRV@origverbatim@input{\#1}{\#2}%
7051 \LWR@afterendverbatim{1.5}%
7052 }}
```

Env verbatim

```
7053 \AfterEndPreamble{
7054 \LWR@traceinfo{Patching verbatim.}
7055 \AtBeginEnvironment{verbatim}{%
7056 \LWR@forcenewpage%
7057 \LWR@atbeginverbatim{2.5}{verbatim}%
7058 }
7059 \AfterEndEnvironment{verbatim}{%
7060     \LWR@afterendverbatim{1}%
7061 }
7062 }
```

Env tabbing The tabbing environment works, except that `svg` math and `lateximages` do not yet work inside the environment.

⚠ **math in tabbing** If math is used inside tabbing, place tabbing inside a `lateximage` environment, which will render the entire environment as a single `svg` image.

```
7063 \newcommand*{\LWR@HTML@tabbing}{%
7064 \LWR@forcenewpage%
```

```

7065 \LWR@atbeginverbatim{3}{tabbing}%
7066 \LWR@print@tabbing%
7067 }
7068

70 Theorems

\newtheorem {⟨text⟩} [⟨counter⟩] -or- [⟨oldname⟩] {⟨text⟩}

A few minor changes are made to supply HTML tags.

- The entire theorem is placed into a <div> of class theoremcontents.
- The label for each theorem is placed inside a of class theoremlabel.
- The contents are placed inside a <div> of class theoremcontents.

for HTML output: 7077 \begin{warpHTML}

\@begintheorem {⟨name⟩} {⟨number⟩}

```

7078 \renewcommand{\@begintheorem}[2]{%
7079 \LWR@forcenewpage
7080 \BlockClass{theoremcontents}
7081 \trivlist
7082 \item[\InlineClass{theoremlabel}{#1\ #2\ }]\itshape
7083 }

```

\@opargbegintheorem {⟨name⟩} {⟨number⟩} {⟨oparg⟩}

```

7084 \renewcommand{\@opargbegintheorem}[3]{%
7085 \LWR@forcenewpage

7089 }

```

\@endtheorem

```

7090 \renewcommand*{\@endtheorem}{%

```

```

7091 \endtrivlist
7092 \endBlockClass% theoremcontents
7093 }

7094 \end{warpHTML}

```

71 Lists

The environments `itemize`, `enumerate`, and `description` are patched when `lwarp` is started. These patches support the standard L^AT_EX environments, as well as those of `enumerate`, `enumitem`, and `paralist`, and at least the French version of `babel`. Additional patches are done on a package-specific basis.

The L^AT_EX source for `itemize` and `enumerate` are found in `source2e`, but the source for `description` is found in `article.cls`, etc.

empty item To have an empty item, use `\mbox{}` or a trailing backslash. This forces a new line in print output, matching the new line which will appear in HTML output. Ex:

```

begin{itemize}
item \mbox{}
\begin{itemize}
...
\end{itemize}
item \
\begin{itemize}
...
\end{itemize}

```

\makelabel While inside a list environment, `lwarp` nullifies a number of T_EX horizontal skip and fill commands, allowing the user to define `\makelabel` for print mode while HTML mode ignores those commands.

 **label font** When defining `\makelabel` in a list environment, use `\textbf` etc. instead of `\bfseries`.

71.1 List environment

for HTML output: 7095 `\begin{warpHTML}`

`\LWR@printcloselist` May be locally redefined by `enumerate` or `description`.

```
7096 \newcommand*{\LWR@printcloselist}{\LWR@printcloseitemize}
```

`\LWR@printopenlist` May be locally redefined by `enumerate` or `description`.

```
7097 \newcommand*{\LWR@printopenlist}{ul style="\LWR@print@mbox{list-style-type:none}"} 
```

\@mklab Removes PDF spacing.

```
7098 \AtBeginDocument{  
7099 \def\@mklab#1{

7267 \renewcommand*{\LWR@printopenlist}{\LWR@printopenlist}
7268 \let\item\LWR@descitem%
7269 \LWR@nulllistfills%
7270 }
```

71.5 Patching the lists

\LWR@patchlists Patches list environments.

\LWR@patchlists remembers \item as defined by whatever packages have been loaded, then patches the itemize, enumerate, and description environments and \item. This works with the native L^AT_EX environments, as well as those provided by enumitem, enumerate, and paralist.

```
7271 \newcommand*{\LWR@patchlists}{%
7272     \LetLtxMacro{\item}{\LWR@listitem}%
7273     \LetLtxMacro{\@item}{\LWR@HTML@item}%
7274     \renewcommand*{\@trivlist}{%
7275         \LWR@traceinfo{@trivlist start}}%
```

```

7276      \LWR@liststart%
7277      \LWR@orig@trivlist%
7278      \LWR@traceinfo{@trivlist done}%
7279  }%
7280  \renewcommand*{\trivlist}{%

7316 }

7317 \end{warpHTML}

```

72 Tabular

This is arguably the most complicated part of the entire package. Numerous tricks are employed to handle the syntax of the L^AT_EX core and the various tabular-related packages.

72.1 Limitations

Tabular mostly works as expected, but pay special attention to the following, especially if working with environments, macros inside tabulars, multirows, siunitx S columns, or the packages multirow, longtable, supertabular, or xtab.

Defining macros and environments:

- ⚠ Misplaced alignment tab character &
 - When defining environments or macros which include tabular and instances of the & character, it may be necessary to make & active before the environment or macro is defined, then restore & to its default catcode after, using the following commands. These are ignored in print mode.

```
\StartDefiningTabulars
<define macros or environments using tabular and & here>
\StopDefiningTabulars
```
- ⚠ floatrow
 - This includes before and after defining any macro which used \ttabbox from floatrow.
- ⚠ tabular inside another environment
 - When creating a new environment which contains a tabular environment, lwarf's emulation of the tabular does not automatically resume when the containing environment ends, resulting in corrupted HTML rows. To fix this, use \ResumeTabular as follows. This is ignored in print mode.

```
\StartDefiningTabulars % because & is used in a
definition
\newenvironment{outerenvironment}
{
\begin{tabular}{cc}
left & right \\
}
{
\TabularMacro\ResumeTabular
left & right \\
\end{tabular}
}
\StopDefiningTabulars
```

Cell contents:

- ⚠ macro in a table
 - Using a custom macro inside a tabular data cell may result in an extra HTML data cell tag, corrupting the HTML table. To avoid this, use \TabularMacro just before the macro. This is ignored in print mode.

```
\TabularMacro\somemacro & more row contents \\
```

Column specifiers:

- ⚠ @ and !
 - Only one each of @ and ! is used at each column, and they are used in that order.
- ⚠ \multirow
 - In \multirow cells, the print version may have extra instances of <, >, @, and ! cells on the second and later rows in the \multirow which do not appear in the HTML version.
- ⚠ \newcolumntype
 - \newcolumntype is ignored; unknown column types are set to l.

Rules:**vertical rules**

- Doubled `\hlines`, `\midrules`, and vertical rules are supported.
- Vertical rules next to either side of an @ or ! column are displayed on both sides of the column.

width and trim

- Width options are honored. Trim options are converted to rounded top corners. Trim corners are not rounded with @ or ! columns, and full-width rules ignore trim.

full-width rules

- `\toprule`, `\midrule`, `\bottomrule`, and `\hline` ignore trim. When given an optional width, each cell is styled to create the custom border. Without an optional width, the entire row is given a class to assign the standard border.

combined rules

- If you wish to use `\cmidrule` followed by `\bottomrule`, it may be necessary to use:

```
\cmidrule{2-3} \\[-2ex]
```

```
\bottomrule
```

The optional -2ex is ignored in HTML, but improves the visual formatting in the print output.

- For `\toprule` and `\bottomrule`, when combined with a `\warpprint` or `\warpHTML` environment, if a “Misplaced `\noalign`” error occurs, change

This & That `\endhead`

to

```
\warpprintonly{This & That \endhead}
```

and likewise with the other `\end` headings. Keep the `\endfirsthead` row unchanged, as it is still relevant to HTML output.

Other:**longtable headings**

- `tabularx` ignores the width, but X columns do produce paragraph columns or multicolumns.

S columns

- For `longtable`, place headings and footings which do not apply to HTML inside `\warpprintonly{}`.
- For S columns (from the `siunitx` package), while producing print output, anything non-numeric must be placed inside {} braces, including commands such as `\multirow`. While producing HTML output, though, anything placed inside braces is not seen by lwarp’s tabular handling algorithm. To resolve this problem, make a copy of the row, with one version for print output, containing the extra braces, and another version for HTML output, without the extra braces, such as:

```
\warpprintonly{1 & 2 & {\multirow{2}{2cm}{Text}} & 3 \\}
\warpHTMLonly{1 & 2 & \multirow{2}{2cm}{Text} & 3 \\}
```

- In L^AT_EX, a `tabular` may be placed inside a `minipage`, but in HTML a `<table>` may not be inside a ``. If this situation is detected, a warning is printed instructing the user to isolate the `` using `\warpprintonly` or the `\warpprint` environment.

for HTML output: 7318 `\begin{warpHTML}`

72.2 Temporary package-related macros

These macros are temporary placeholders for macros defined by various packages. If the relevant package is not loaded, these placeholders are used instead.

72.2.1 `arydshln`

Emulated by the original L^AT_EX non-dashed versions.

```
7319 \LetLtxMacro{\hdashline}{\hline}
7320 \LetLtxMacro{\cdashline}{\cline}
7321 \LetLtxMacro{\firstdashline}{\hline}
7322 \LetLtxMacro{\lastdashline}{\hline}
```

72.3 Token lookahead

Used by `\LWR@futureonospacelet` to look at the next token.

```
\LWR@mynexttoken
```

```
7323 \newcommand{\LWR@mynexttoken}{\relax
    \futurelet \nexttok \LWR@futureonospacelet
    \ifx \nexttok \relax \else \nexttok \fi
    \expandafter \LWR@futureonospacelet
```

`\futurelet` copies the next token then executes a function to analyze
`\LWR@futureonospacelet` does the same, but ignores intervening white space

Based on the booktabs style:

```
\LWR@futureonospacelet
```

```
7324 \def{\LWR@futureonospacelet}{\def{\LWR@cs{\#1}}%
    \afterassignment{\LWR@fnalone\let{\nexttok= } }%
    \def{\LWR@fnalone}{\expandafter{\futurelet{\LWR@cs{\LWR@fnltwo}}%
        \def{\LWR@fnltwo}{\%}}%
    \expandafter{\ifx{\LWR@cs{\sptok}}{\let{\next=\LWR@fnlthree}}%
        \else{\let{\next=\nexttok}\fi}%
        \next}%
    \def{\LWR@fnlthree}{\afterassignment{\LWR@fnalone\let{\next= } }%
```

`\LWR@getmynexttoken` Looks ahead and copies the next token into `\LWR@mynexttoken`.

```
7331 \newcommand*{\LWR@getmynexttoken}{%
    \LWR@traceinfo{\LWR@getmynexttoken}%
    % nothing must follow this next line
    \LWR@futureonospacelet{\LWR@mynexttoken\LWR@tabledatacolumntag}%
}
```

72.4 Tabular variables

Bool LWR@startedrow True if should print a row tag before this column.

```
7336 \newbool{LWR@startedrow}
7337 \boolefalse{LWR@startedrow}
```

Bool LWR@tabularcelladded True if have added a data cell for this position.

```
7338 \newbool{LWR@tabularcelladded}
7339 \boolefalse{LWR@tabularcelladded}
```

Ctr LWR@hlines Number of \hlines or \midrules above the next row.

```
7340 \newcounter{LWR@hlines}
```

Ctr LWR@hdashedlines Number of arydshln dashed lines above the next row.

```
7341 \newcounter{LWR@hdashedlines}
```

Bool LWR@doingtbrule True if the next row will have a top/bottom rule above it.

```
7342 \newbool{LWR@doingtbrule}
7343 \boolefalse{LWR@doingtbrule}
```

Bool LWR@doingcmidrule True if the next row will have a cmidrule above it.

This is used by \LWR@tabularfinishrow to force a final empty row to create the border for the \cmidrule.

```
7344 \newbool{LWR@doingcmidrule}
7345 \boolefalse{LWR@doingcmidrule}
```

Bool LWR@tableparcell True if are handling a paragraph inside a table cell, so must close the paragraph tag before moving on.

```
7346 \newbool{LWR@tableparcell}
```

Bool LWR@skippingmrowcell True if are doing an empty \multirow cell, and thus there is no data tag to close.

```
7347 \newbool{LWR@skippingmrowcell}
```

Bool LWR@skippingmcolrowcell True if are doing an empty \multicolumnrow cell, and thus there is no data tag to close, and do not print @ and ! columns.

```
7348 \newbool{LWR@skippingmcolrowcell}
```

Bool LWR@usedmultirow Used to error if used \multirow or \multicolumnrow without using \mrowcell or \mcolrowcell.

```
7349 \newbool{LWR@usedmultirow}
```

Bool LWR@foundmrowcell Used to error if used `\multirow` or `\multicolumn` without using `\mrowcell` or `\mcolrowcell`.

```
7350 \newbool{LWR@foundmrowcell}
```

Bool LWR@skipatbang True if just finished a `\multicolumn` so should not create the trailing @ or ! columns table data cells.

```
7351 \newbool{LWR@skipatbang}
```

Bool LWR@emptyatbang True if finishing a row and should print empty @ or ! column table data cells.

```
7352 \newbool{LWR@emptyatbang}
```

Bool LWR@intabularmetadata True if are in a tabular but not in a data cell. Used to prevent extra HTML breaks if not inside table data.

```
7353 \newbool{LWR@intabularmetadata}
```

```
7354 \boolfalse{LWR@intabularmetadata}
```

Ctr LWR@tabularDepth Tracks whether & is being used inside a tabular.

```
7355 \newcounter{LWR@tabulardepth}
```

```
7356 \setcounter{LWR@tabulardepth}{0}
```

Ctr LWR@tabularpardepth Tracks whether should look ahead at the next token when encountering a `\par` while processing tabular contents.

When `LWR@tabularpardepth` is deeper than `LWR@tabulardepth` then `lwarp` has started looking at the contents of the tabular, and thus any `\pars` encountered must be followed by another token lookahead.

```
7357 \newcounter{LWR@tabularpardepth}
```

```
7358 \setcounter{LWR@tabularpardepth}{0}
```

```
7359 \newcommand*{\LWR@colsresult}{}%temp storage for column format results
```

```
7360 \newcommand*{\LWR@position}{}%
```

```
7361 \newcommand*{\LWR@pleft}{}%
```

```
7362 \newcommand*{\LWR@pright}{}%
```

LWR@tablecolspec Holds the parsed column specification, of total width `LWR@tabletotalLaTeXcols`, not counting @ and ! columns.

Will contain a string such as `llrrccpc`, exactly one letter per LATEX table column, without @, !, >, <, or the vertical bar.

`\LWR@strresult` Holds the result of Str functions.

```
7363 \providecommand*{\LWR@strresult}{}%
```

```
7364 \providecommand*{\LWR@strresulttwo}{}%
```

\LWR@origcolspec Holds the original column specs given to tabular.

```
7365 \newcommand*{\LWR@origcolspec}{}%
```

Ctr LWR@tablecolspecwidth Holds the number of tokens in the table columns specification.

This includes one for each @, !, <, > column, and also one for each of the parameters of p, @, !, <, > columns, and three for each D column.

(This is not the total # of *LATEX* columns in the table.)

```
7366 \newcounter{LWR@tablecolspecwidth}
```

Ctr LWR@tablecolspecindex While parsing the *LATEX* table column specification, starts at 1 and is incremented per token of the specification.

```
7367 \newcounter{LWR@tablecolspecindex}
```

Ctr LWR@tableLaTeXcolindex While producing the table, resets to 1 at the start of the table and also at each end of line, and is incremented by 1 by each ampersand.

```
7368 \newcounter{LWR@tableLaTeXcolindex}
```

Ctr LWR@tabletotalLaTeXcols While parsing a table column specification, begins at 0 and increments by 1 per *LATEX* table column. Eventually holds the final number of *LATEX* table columns in each row, not counting @ and ! columns. (In *HTML*, @ and ! cells become their own columns, but are not included in LWR@tabletotalLaTeXcols.)

```
7369 \newcounter{LWR@tabletotalLaTeXcols}
```

Ctr LWR@tabletotalLaTeXcolsnext Holds the next *LATEX* table column index while parsing, equal to one more than LWR@tabletotalLaTeXcolsnext LWR@tabletotalLaTeXcols.

```
7370 \newcounter{LWR@tabletotalLaTeXcolsnext}
```

LWR@colatspec A data array of specifications for @ columns. The leftmost's index is lefthead, the others are counter values. See section 42.

LWR@colbangspec A data array of specifications for ! columns. The leftmost's index is lefthead, the others are counter values. See section 42.

LWR@colbeforespec A data array of specifications for > columns.

LWR@col afterspec A data array of specifications for < columns.

LWR@colbarspec A data array of specifications for vertical rules.

72.5 Handling &, @, !, and bar

For technical discussion regarding problems redefining \&, See:

<http://tex.stackexchange.com/questions/11638/>

[where-do-i-find-futurelets-nasty-behaviour-documented/11860#11860](http://tex.stackexchange.com/questions/11860/#11860)

```
\LWR@insertatbangcols
```

```
7371 \newcommand*{\LWR@insertatbangcols}{%
7372 \ifbool{\LWR@skipatbang}{%
7373 {}{%
7374 {}{%
7375 \LWR@printatbang{at}{\arabic{LWR@tableLaTeXcolindex}}{%
7376 \LWR@printatbang{bang}{\arabic{LWR@tableLaTeXcolindex}}{%
7377 }{%
7378 }}
```

\LWR@closetabledatacell If `LWR@skippingmrowcell` or `LWR@skippingmcolrowcell` then there is no data tag to close. Otherwise, close any paragraphs, then close the data tag.

```
7379 \newcommand*{\LWR@closetabledatacell}{%
7380 \global\booltrue{\LWR@intabularmetadata}{%
7381 \ifbool{\LWR@exittingtabular}{%
7382 {}{%
7383 \LWR@stoppars{%
7384 }{%
7385 {}{%
7386 \ifboolexpr{\bool{\LWR@skippingmrowcell} \or \bool{\LWR@skippingmcolrowcell}}{%
7387 {}{%
7388 \LWR@stoppars{}}
```

If not skipping a `\multicolumnrow` cell, insert the @ and ! columns after this non-existent column.

```
7389 \ifbool{\LWR@skippingmcolrowcell}{%
7390 {}{%
7391 {\LWR@insertatbangcols}{%
7392 }{%
7393 {}{not skippingmrowcell}}
```

Insert any < then any @ and ! column contents, unless muted for the `\bottomrule` or a `\multicolumn`:

```
7394 \unskip{%
7395 \ifboolexpr{%
7396 \bool{\LWR@tabularmutemods} \or
7397 \bool{\LWR@skipatbang} \or
7398 \bool{\LWR@emptyatbang}{%
7399 }{%
7400 }{%
7401 {\LWR@getexparray{\LWR@colafperspec}{\arabic{LWR@tableLaTeXcolindex}}{}}
```

Close paragraphs:

```
7402 \LWR@stoppars{%
7403 \global\boolfalse{\LWR@tableparcell}{}}
```

Close the table data cell.

Close any color <div>s.

```
7404      \whileboolexpr{test {\ifnumcomp{\value{LWR@cellcolordepth}}{>}{0}}}{{%
7405          \LWR@htmltag{/div}\LWR@orignewline%
7406          \addtocounter{LWR@cellcolordepth}{-1}%
7407      }%
```

Skip the @ and ! cells if are closing a multicolumn cell.

```
7408      \leavevmode\unskip\LWR@htmltag{/td}\LWR@orignewline%
7409      \global\booltrue{LWR@tabularcelladded}%
7410      \LWR@insertatbangcols%
7411  }% not skipping mrowcell
7412 }% not exiting tabular
7413 \global\boolfalse{LWR@skippingmrowcell}%
7414 \global\boolfalse{LWR@skippingmcolrowcell}%
7415 \global\boolfalse{LWR@skipatbang}%
```

Color control. Column is set by >{} for each cell, so it must be cleared here.

```
7416 \gdef\LWR@cellHTMLcolor{}%
7417 \gdef\LWR@columnHTMLcolor{}%
7418 \setcounter{LWR@cellcolordepth}{0}%
7419 }
```

When not used inside a `tabular`, & performs its original function as recorded here (with catcode 4).

```
7420 \let\LWR@origampmacro&
7421 \end{warpHTML}
```

72.5.1 Handling &

for HTML output: 7422 `\begin{warpHTML}`

- & Will behave depending on whether it is being used inside `tabular`.
- & is redefined to test whether it is inside a `tabular` environment, in which case it performs special processing for HTML conversion. If not, it behaves normally.

```
7423 \newcommand*\LWR@tabularampersand{}%
7424 \LWR@traceinfo{LWR@tabularampersand}%
7425 \ifnumcomp{\value{LWR@tabulardepth}}{>}{0}%
7426 {%
```

If not skipping a multirow cell, close the current data cell.

```
7427 \unskip%
7428 \LWR@closestabledatacell%
```

Move to the next column.

```
7429     \addtocounter{LWR@tableLaTeXcolindex}{1}%
```

Have not yet added data in this column:

```
7430     \global\boolfalse{LWR@tabularcelladded}%
```

Look at the next token to decide multi or single column data tag.

```
7431     \LWR@getmynexttoken%
7432 }%
```

If not inside a tabular, performs the original action:

```
7433 {\LWR@origampmacro}%
7434 }
```

& is left with its original catcode for now.

tikz package seems to require & be left alone until after tikz has been loaded. Also, cleveref uses the ampersand in one of its options.

& is made active inside a tabular.

& is left alone when in math alignments.

72.5.2 Filling an unfinished row

\LWR@tabularfinishrow Adds empty table cells if necessary to finish the row.

At the end of the table, if any bottom rules are requested then an empty row must be generated to form the borders which show the rules.

```
7435 \newcommand*{\LWR@tabularfinishrow}{%
```

If not exiting the tabular, or doing a rule, or have already started a row, finish this row:

```
7436 \ifboolexpr{%
7437     not bool{LWR@exittingtabular} or%
7438     bool{LWR@doingtbrule} or%
7439     bool{LWR@doingcmidrule} or%
7440     test{\ifnumcomp{\value{LWR@hlines}}{>}{0}} or%
7441     test{\ifnumcomp{\value{LWR@hdashedlines}}{>}{0}} or%
7442     bool{LWR@startedrow}%
7443 }{%
```

To temporarily turn off LWR@exittingtabular so that table data tags will still be generated:

If generating a final row for the \bottomrule borders, turn off the @, !, <, and > column output:

```

7444 \ifbool{LWR@exittingtabular}{%
7445     \global\booltrue{LWR@tabularmutemods}%
7446 }{%
7447     \global\boolfalse{LWR@tabularmutemods}%
7448 }%

```

Locally reenable the table data tags until finished with the final row:

```
7449 \global\boolfalse{LWR@exittingtabular}%
```

Generate table data tags and ampersands until the right edge:

```

7450 \whileboolexpr{%
7451     test {
7452         \ifnumcomp{\value{LWR@tableLaTeXcolindex}}{<}{\value{LWR@tabletotalLaTeXcols}}
7453     } or %
7454     (%
7455         \bool{LWR@intabularmetadata} and%
7456         not \bool{LWR@tabularcelladded} and%
7457         test {
7458             \ifnumcomp{\value{LWR@tableLaTeXcolindex}}{=}{\value{LWR@tabletotalLaTeXcols}}
7459         }%
7460     )%
7461 }%
7462 {%
7463     \LWR@tabledatasinglecolumntag%

```

The following is essentially \LWR@tabularampersand with LWR@emptyatbang added to empty the following cells:

```

7464     \LWR@closetabledatacell%
7465     \addtocounter{LWR@tableLaTeXcolindex}{1}%
7466     \global\boolfalse{LWR@tabularcelladded}%
7467     \global\booltrue{LWR@emptyatbang}%

```

Starts the next cell:

```

7468     \ifnumcomp{\value{LWR@tableLaTeXcolindex}}{<}{\value{LWR@tabletotalLaTeXcols}}{%
7469         \LWR@getmynexttoken}%
7470     {}%
7471 }%

```

Reenable the original LWR@exittingtabular to close the entire table:

```

7472 \ifbool{LWR@tabularmutemods}{%
7473     \global\booltrue{LWR@exittingtabular}%
7474 }{%
7475     \global\boolfalse{LWR@exittingtabular}%
7476 }%
7477 \global\boolfalse{LWR@tabularmutemods}%
7478 \global\boolfalse{LWR@emptyatbang}%
7479 }{} ifboolexpr
7480 }

```

72.6 Handling \\

Inside tabular, \\ is redefined to \LWR@tabularendofline

Throws away options \\[dim] or *

\LWR@tabularendofline

```
7481 \NewDocumentCommand{\LWR@tabularendofline}{s o}{%
```

Finish the row:

```
7482 \ifnumcomp{\value{LWR@tableLaTeXcolindex}}{<}{\value{LWR@tabletotalLaTeXcols}}%
7483     {\LWR@tabularfinishrow}%
7484     {\LWR@closetabledatacell}%
7485 \LWR@htmltag{/tr}\LWR@orignewline%
```

xcolor row color support:

```
7486 @rowc@lors%
```

No longer inside a data cell:

```
7487 \global\booltrue{LWR@intabularmetadata}%
```

Not yet started a table row:

```
7488 \global\boolfalse{LWR@startedrow}%
```

Additional setup:

```
7489 \setcounter{LWR@hlines}{0}%
7490 \setcounter{LWR@hdashedlines}{0}%
7491 \global\boolfalse{LWR@doingtbrule}%
7492 \global\boolfalse{LWR@doingcmidrule}%
7493 \LWR@clearmidrules%
7494 \gdef\LWR@rowHTMLcolor{}%
```

Start at first column:

```
7495 \setcounter{LWR@tableLaTeXcolindex}{1}%
```

Have not yet added data in this column:

```
7496 \global\boolfalse{LWR@tabularcelladded}%
```

Allow TeX to flush the pending paragraph. Not doing so causes a slowdown for very large tables.

```
7497 \LWR@stopars
7498 \LWR@origpar
```

Look at the next token to decide between single column data tag or a special case:

```
7499 \LWR@getmynexttoken%
7500 }
```

72.7 Looking ahead in the column specifications

\LWR@columnspeclookahead {*offset*}

Looks *offset* tokens ahead in the column specification, setting \LWR@strresulttwo.

The w column alignment will be seen as a single unit such as {c}.

```
7501 \newcommand*{\LWR@columnspeclookahead}[1]{%
7502 \setcounter{LWR@tempcountone}{\value{\LWR@tablecolspecindex}}%
7503 \addtocounter{LWR@tempcountone}{#1}%
7504 \fullexpandarg%
7505 \StrChar{\LWR@origcolspec}{\arabic{LWR@tempcountone}}[\LWR@strresulttwo]%
```

Get the contents of the first group in \LWR@strresulttwo:

```
7506 \exploregroups%
7507 \StrChar{\LWR@strresulttwo}{1}[\LWR@strresulttwo]%
7508 \noexploregroups%
7509 }
```

72.8 Parsing @, >, <, !, bar columns

Holds the parsed argument for @, >, <, or ! columns:

```
7510 \newcommand*{\LWR@colparameter}{}%
```

\LWR@parseatcolumn Handles {@text} columns.

```
7511 \newcommand*{\LWR@parseatcolumn}{}%
```

Move to the next token after the '@':

```
7512 \LWR@traceinfo{at column}%
7513 \addtocounter{LWR@tablecolspecindex}{1}%
```

Read the next token into \LWR@colparameter, expanding once:

```
7514 \LWR@traceinfo{about to read the next token:}%
7515 \expandarg%
7516 \StrChar{\LWR@origcolspec}%
7517 {\arabic{LWR@tablecolspecindex}}[\LWR@colparameter]
7518 \fullexpandarg%
```

Store the result into a data array, expanding once out of \LWR@colparameter:

```

7519 \LWR@traceinfo{have now read the next token}%
7520 \ifnumcomp{\value{LWR@tabletotalLaTeXcols}}{=}{0}%
7521 {%
    % left edge of the table:
    \LWR@traceinfo{at the left edge}%
    \LWR@setexparray{LWR@colatspec}{leftedge}{\LWR@colparameter}%
    \LWR@traceinfo{at the left edge: \%}
    \LWR@getexparray{LWR@colatspec}{leftedge}%
}%
7527 {%
    % not at the left edge:
    \LWR@traceinfo{not at the left edge}%
    \LWR@setexparray{LWR@colatspec}%
        {\arabic{LWR@tabletotalLaTeXcols}}{\LWR@colparameter}%
    \LWR@traceinfo{at \arabic{LWR@tabletotalLaTeXcols}: \%}
    \LWR@getexparray{LWR@colatspec}{\arabic{LWR@tabletotalLaTeXcols}}%
}%
7534 \let\LWR@colparameter\relax%
7535 \global\booltrue{LWR@validtablecol}%
7536 }

```

\LWR@parsebangcolumn Handles !{text} columns.

```
7537 \newcommand*{\LWR@parsebangcolumn}{%
```

Move to the next token after the '!':

```

7538 \LWR@traceinfo{bang column}%
7539 \addtocounter{LWR@tablecolsindex}{1}%

```

Read the next token into \LWR@colparameter, expanding once:

```

7540 \LWR@traceinfo{about to read the next token:}%
7541 \expandarg%
7542 \StrChar{\LWR@origcolspec}%
7543 {\arabic{LWR@tablecolsindex}}[\LWR@colparameter]%
7544 \fullexpandarg%

```

Store the result into a data array, expanding once out of \LWR@colparameter:

```

7545 \LWR@traceinfo{have now read the next token}%
7546 \ifnumcomp{\value{LWR@tabletotalLaTeXcols}}{=}{0}%
7547 {%
    % left edge of the table:
    \LWR@traceinfo{at the left edge}%
    \LWR@setexparray{LWR@colbangspec}{leftedge}{\LWR@colparameter}%
}%
7551 {%
    % not at the left edge:
    \LWR@traceinfo{not at the left edge}%
    \LWR@setexparray{LWR@colbangspec}%
        {\arabic{LWR@tabletotalLaTeXcols}}{\LWR@colparameter}%
    \LWR@traceinfo{bang \arabic{LWR@tabletotalLaTeXcols}: \LWR@colparameter!}%
}%
7556 }%
7557 \let\LWR@colparameter\relax%
7558 \global\booltrue{LWR@validtablecol}%

```

7559 }

\LWR@parsebeforecolumn Handles >{text} columns.

7560 \newcommand*{\LWR@parsebeforecolumn}{%

Move to the next token after the '>':

7561 \addtocounter{\LWR@tablecolsindex}{1}%

Read the next token, expanding once into \LWR@colparameter:

7562 \expandarg%
 7563 \StrChar{\LWR@origcolspec}%
 7564 {\arabic{\LWR@tablecolsindex}}[\LWR@colparameter]%

7565 \fullexpandarg%

Store the result into a data array, expanding once out of \LWR@colparameter:

7566 \LWR@setexpparray{\LWR@colbeforespec}%
 7567 {\arabic{\LWR@tabletotalLaTeXcolsnext}}[\LWR@colparameter]%

7568 \let\LWR@colparameter\relax%

7569 \global\booltrue{\LWR@validtablecol}%

7570 }

\LWR@parseaftercolumn Handles <{text} columns.

7571 \newcommand*{\LWR@parseaftercolumn}{%

Move to the next token after the '<':

7572 \addtocounter{\LWR@tablecolsindex}{1}%

Read the next token, expanding once into \LWR@colparameter:

7573 \expandarg%
 7574 \StrChar{\LWR@origcolspec}%
 7575 {\arabic{\LWR@tablecolsindex}}[\LWR@colparameter]%

7576 \fullexpandarg%

Store the result into a data array, expanding once out of \LWR@colparameter:

7577 \LWR@setexpparray{\LWR@colafterspec}%
 7578 {\arabic{\LWR@tabletotalLaTeXcols}}[\LWR@colparameter]%

7579 \let\LWR@colparameter\relax%

7580 \global\booltrue{\LWR@validtablecol}%

7581 }

\LWR@parsebarcolumn Handles vertical rules.

7582 \newcommand*{\LWR@parsebarcolumn}{%

7583 \LWR@traceinfo{\LWR@parsebarcolumn}%

Remember the bar at this position:

```

7584 \ifnumcomp{\value{LWR@tabletotalLaTeXcols}}{=}{0}%

7641 \LWR@setexpparray{\LWR@colbarspec}{\arabic{\LWR@tabletotalLaTeXcolsnext}}{}%

7642 \global\booltrue{\LWR@validtablecol}%

7643 }

72.10 Parsing ‘p’, ‘m’, or ‘b’ columns

\LWR@parsepcolumn {*thiscolumn*} The width will be ignored.

7644 \newcommand*{\LWR@parsepcolumn}[1]{%

Converts to the given column type:

7645 \LWR@parsenormalcolumn{#1}%

Skips the following width token:

7646 \addtocounter{\LWR@tablecolsindex}{1}%

7647 }

72.11 Parsing ‘w’ columns

\LWR@parsewcolumn The width will be ignored.

```
7648 \newcommand*{\LWR@parsewcolumn}{%
7649 \LWR@columnspeclookahead{1}%
7650 \expandafter\LWR@parsenormalcolumn\expandafter{\LWR@strresulttwo}%
}
```

Skips the following width and alignment tokens:

```
7651 \addtocounter{\LWR@tablecolsindex}{2}%
7652 }
```

72.12 Parsing ‘*’ columns

\LWR@parsestarcolumn Star columns should already have been expanded, so this should never be used.

```
7653 \newcommand*{\LWR@parsestarcolumn}{%
7654 \addtocounter{\LWR@tablecolsindex}{2}%
7655 }
```

72.13 Parsing ‘D’ columns

From the `dcolumn` package.

\LWR@parseDcolumn {*thiscolumn*} The three parameters will be ignored.

```
7656 \newcommand*{\LWR@parseDcolumn}[1]{%
```

Converts to the given column type.

```
7657 \LWR@parsenormalcolumn{#1}%
```

Skips the following three parameters.

```
7658 \addtocounter{\LWR@tablecolsindex}{3}%
7659 }
```

72.14 Expanding the star column specifications

Ctr \LWR@starcount Internal count for duplicating star columns.

```
7660 \newcount\LWR@starcount
```

\LWR@expcolspec Temporary storage used to build the expanded column specifier.

```
7661 \newcommand*{\LWR@expcolspec}{}%
```

Ctr \LWR@splitstarindex Indexes into the column specifiers.

```
7662 \newcounter{LWR@splitstarindex}
```

Ctr \LWR@splitstarcopies Number of copies.

```
7663 \newcounter{LWR@splitstarcopies}
```

\LWR@splitstarcontents Contents to duplicate.

```
7664 \newcommand*{\LWR@splitstarcontents}{}%
```

\expandcolspeс Expands \LWR@origcolspeс for star columns.

```
7665 \newcommand*{\expandcolspeс}{%
```

Find the position of any star token.

```
7666 \StrPosition{\LWR@origcolspeс}{*}[\LWR@tempone]%
```

Expand until no stars are found:

```
7667 \whileboolexpr{ test {\ifnumgreater{\LWR@tempone}{0}}}%
7668 {%
```

Begin with any characters to the left of the star.

```
7669 \setcounter{LWR@splitstarindex}{\LWR@tempone}%
7670 \addtocounter{LWR@splitstarindex}{-1}%
7671 \StrLeft{\LWR@origcolspeс}{\value{LWR@splitstarindex}}[\LWR@expcolspeс]%
```

Move past the star to remember its number of copies.

```

7689 \edef\LWR@origcolspec{\LWR@expcolspec}%
```

See if more stars exist.

```

7690   \StrPosition{\LWR@origcolspec}{*}[\LWR@tempone]%
7691   }%
7692 }%

```

72.15 Parsing the column specifications

⚠ tabular baselines

HTML CSS cannot exactly match the L^AT_EX concept of a baseline for a table row. Table 10 shows the L^AT_EX results for various vertical-alignment choices, with the baseline of the first column drawn across all the columns for comparison. See the p column specification in table 11 for details.

Table 11 describes how each kind of column is converted to HTML.

Bool `LWR@validtablecol` True if found a valid table column type.

```
7693 \newbool{LWR@validtablecol}
```

Bool `LWR@opttablecol` True if found a table column optional argument.

```
7694 \newbool{LWR@opttablecol}
```

Table 11: Tabular HTML column conversions

-
- l, r, c:** Converted to table cells without paragraph tags.
Uses css vertical-align:middle so that top or bottom-aligned cells may go above or below this cell.
- p:** Converted to table cells with paragraph tags. Ref: Table 10, L^AT_EX places the top line of a parbox aligned with the rest of the text line, so css vertical-align:bottom is used to have the HTML result appear with the paragraph extending below the L, R, C cells at the middle, if possible. This may be confusing as a P cell may not top-align with an L,R,C cell in the HTML conversion, especially in the presence of a B cell, and two P cells side-by-side will be aligned at the bottom instead of the top. Some adjustment of the css may be desired, changing td.tdp, td.tdP, td.tdprule, and td.tdPrule to vertical-align: middle. Another possibility is to change L,R,C, and P to vertical-align: top and not worry about the alignment of B and M cells or trying to approximate L^AT_EX baselines.
- m:** With paragraph tags, css vertical-align:middle.
- b:** With paragraph tags, css vertical-align:top so that the bottom of the text is closest to the middle of the text line.
- P, M, B:** Horizontally-centered versions.
- S:** Converted to 'r'. Ignores optional argument. From the siunitx package.
- D:** Converted to 'c'. From the dcolumn package.
- @, !, >, <:** One each, in that order.
- |:** Vertical rule.
- Unknown:** Converted to 'l'.
- \newcolumn:** Currently treated as unknown.
-

```
\LWR@parsetablecols {⟨colspecs⟩}
```

Scans the column specification left to right.

Builds `\LWR@tablecolspec` with the final specification, one `LATEX` column per entry. The final number of `LATEX` columns in each row is stored in `\LWR@tabletotalLaTeXcols`, which is the number of `&` and `\`` in each line, but which does not include `@`, `!`, `<`, `>` specifications in the count.

```
7695 \newcommand*{\LWR@parsetablecols}[1]{%
7696 \LWR@traceinfo{\LWR@parsetablecols}{%
```

Remember the original supplied column spec:

```
7697 \renewcommand*{\LWR@origcolspec}{#1}{%
```

Remove spaces:

```
7698 \expandarg%
7699 \StrSubstitute{\LWR@origcolspec}{ }{}[\LWR@origcolspec]{%
```

Expand any star columns:

```
7700 \expandcolspec{}
```

The parsed column spec data array, `\LWR@tablecolspec`, will be overwritten with new values.

Total number of columns found so far. Also pre-initialize the first several columns of specs:

```
7701 \setcounter{\LWR@tabletotalLaTeXcols}{0}{%
7702 \setcounter{\LWR@tabletotalLaTeXcolsnext}{1}{%
7703 \LWR@setexpparray{\LWR@colatspec}{leftedge}{}}{%
7704 \LWR@setexpparray{\LWR@colatspec}{1}{}}{%
7705 \LWR@setexpparray{\LWR@colatspec}{2}{}}{%
7706 \LWR@setexpparray{\LWR@colatspec}{3}{}}{%
7707 \LWR@setexpparray{\LWR@colbangspec}{leftedge}{}}{%
7708 \LWR@setexpparray{\LWR@colbangspec}{1}{}}{%
7709 \LWR@setexpparray{\LWR@colbangspec}{2}{}}{%
7710 \LWR@setexpparray{\LWR@colbangspec}{3}{}}{%
7711 \LWR@setexpparray{\LWR@colbeforespec}{1}{}}{%
7712 \LWR@setexpparray{\LWR@colbeforespec}{2}{}}{%
7713 \LWR@setexpparray{\LWR@colbeforespec}{3}{}}{%
7714 \LWR@setexpparray{\LWR@colafterspec}{1}{}}{%
7715 \LWR@setexpparray{\LWR@colafterspec}{2}{}}{%
7716 \LWR@setexpparray{\LWR@colafterspec}{3}{}}{%
7717 \LWR@setexpparray{\LWR@colbarspec}{leftedge}{}}{%
7718 \LWR@setexpparray{\LWR@colbarspec}{1}{}}{%
7719 \LWR@setexpparray{\LWR@colbarspec}{2}{}}{%
7720 \LWR@setexpparray{\LWR@colbarspec}{3}{}}{%
```

Starting at the first column specification:

```
7721 \setcounter{LWR@tablecolspectindex}{1}%
```

Place the colspecs string length into `\LWR@strresult`, and remember the number of characters in the column specification:

```
7722 \expandarg%
7723 \StrLen{\LWR@origcolspec}[\LWR@strresult]%
7724 \fullexpandarg%
7725 \LWR@traceinfo{original column spec length: \LWR@strresult}%
7726 \setcounter{LWR@tablecolspecwidth}{\LWR@strresult}%
```

Haven't seen any optional arguments so far

```
7727 \global\boolfalse{LWR@opttablecol}%
```

Scan through the column specifications:

```
7728 \whileboolexpr{%
7729     not test{%
7730         \ifnumcomp{\value{LWR@tablecolspectindex}}{>}{%
7731             {\value{LWR@tablecolspecwidth}}%
7732         }%
7733     }%
7734 }%
```

Place the next single-character column type into `\LWR@strresult`:

```
7735 \expandarg%
7736 \StrChar{\LWR@origcolspec}{\arabic{LWR@tablecolspectindex}}[\LWR@strresult]%
7737 \LWR@traceinfo{position \arabic{LWR@tablecolspectindex}: \LWR@strresult}%
7738 \fullexpandarg%
```

Not yet found a valid column type:

```
7739 \global\boolfalse{LWR@validtablecol}%
```

Skip over any optional arguments, such as `siunitx S` column:

```
7740 \IfStrEq{\LWR@strresult}{}{\global\booltrue{LWR@opttablecol}}{}
```

Throw away anything found inside the optional argument:

```
7741 \ifbool{LWR@opttablecol}{%
7742 {}% inside an optional argument
7743 {}% not an optional tabular argument
}
```

Not inside an optional argument, so consider the column type:

```
7744 \IfStrEq{\LWR@strresult}{l}{\LWR@parsenormalcolumn{l}}{%
7745 \IfStrEq{\LWR@strresult}{c}{\LWR@parsenormalcolumn{c}}{%
7746 \IfStrEq{\LWR@strresult}{r}{\LWR@parsenormalcolumn{r}}{%
7747 \IfStrEq{\LWR@strresult}{L}{\LWR@parsenormalcolumn{l}}{%
7748 \IfStrEq{\LWR@strresult}{C}{\LWR@parsenormalcolumn{c}}{}}
```

```

7749 \IfStrEq{\LWR@strresult}{R}{\LWR@parsenormalcolumn{r}}{}%
7750 \IfStrEq{\LWR@strresult}{J}{\LWR@parsenormalcolumn{l}}{}%
7751 \IfStrEq{\LWR@strresult}{S}{\LWR@parsenormalcolumn{c}}{}%
7752 \IfStrEq{\LWR@strresult}{s}{\LWR@parsenormalcolumn{c}}{}%
7753 \IfStrEq{\LWR@strresult}{\detokenize{@}}{\LWR@parseatcolumn}{}%
7754 \IfStrEq{\LWR@strresult}{!}{\LWR@parsebangcolumn}{}%
7755 \IfStrEq{\LWR@strresult}{>}{\LWR@parsebeforecolumn}{}%
7756 \IfStrEq{\LWR@strresult}{<}{\LWR@parseaftercolumn}{}%
7757 \IfStrEq{\LWR@strresult}{|}{\LWR@parsebarcolumn}{}%
7758 \IfStrEq{\LWR@strresult}{:}{\LWR@parsecoloncolumn}{}%
7759 \IfStrEq{\LWR@strresult}{;}{\LWR@parsesemicoloncolumn}{}%
7760 \IfStrEq{\LWR@strresult}{p}{\LWR@parsepcolumn{p}}{}%
7761 \IfStrEq{\LWR@strresult}{m}{\LWR@parsepcolumn{m}}{}%
7762 \IfStrEq{\LWR@strresult}{b}{\LWR@parsepcolumn{b}}{}%
7763 \IfStrEq{\LWR@strresult}{w}{\LWR@parsewcolumn}{}%
7764 \IfStrEq{\LWR@strresult}{W}{\LWR@parsewcolumn}{}%

```

A star column:

```
7765 \IfStrEq{\LWR@strresult}{*}{\LWR@parsestarcolumn}{}%
```

From the `dcolumn` package:

```
7766 \IfStrEq{\LWR@strresult}{D}{\LWR@parseDcolumn{c}}{}%
```

From the `tabularx` package. X column has no parameter, but will be given paragraph tags.

```
7767 \IfStrEq{\LWR@strresult}{X}{\LWR@parsenormalcolumn{X}}{}%
```

Many people define centered versions “P”, “M”, and “B”:

```
\newcolumntype{P}[1]{>{\centering\arraybackslash}p{#1}}
```

```

7768 \IfStrEq{\LWR@strresult}{P}{\LWR@parsepcolumn{P}}{}%
7769 \IfStrEq{\LWR@strresult}{M}{\LWR@parsepcolumn{M}}{}%
7770 \IfStrEq{\LWR@strresult}{B}{\LWR@parsepcolumn{B}}{}%

```

If this column was an invalid column type, convert it to an `l` column:

```

7771 \ifbool{\LWR@validtablecol}{}{%
7772   \LWR@traceinfo{invalid column type: \LWR@strresult}%
7773   \LWR@parsenormalcolumn{l}%
7774 }%
7775 }% not an optional column argument

```

If read the closing bracket, no longer inside the optional argument:

```
7776 \IfStrEq{\LWR@strresult}{}{\global\boolfalse{LWR@opttablecol}}{}%
```

Move to the next character:

```
7777 \addtocounter{LWR@tablecolspecindex}{1}%
7778 }% whiledo
7779 }%
```

72.16 colortbl and xparse tabular color support

These macros provide a minimal emulation of some `colortbl` macros which might appear between table cells. If `colortbl` is loaded, these macros will be replaced with functional versions.

For each of the `HTML` colors below, the text for the `HTML` color is set if requested, but the macro is empty if none has been set.

`\rownum` Reserve a counter register.

```
7780 \@ifundefined{rownum}{\newcount\rownum}{}%
```

`\@rowcolors` Emulated in case `xcolor` is not used.

```
7781 \newcommand*{\@rowcolors}{}%
```

`\@rowc@lors` Emulated in case `xcolor` is not used.

```
7782 \newcommand*{\@rowc@lors}{}%
```

`\LWR@xcolorrowHTMLcolor` Emulated `xcolor` row color.

```
7783 \newcommand*{\LWR@xcolorrowHTMLcolor}{}%
```

`\LWR@columnHTMLcolor` `HTMLstyle` code for the column color.

```
7784 \def\LWR@columnHTMLcolor{}%
```

`\LWR@rowHTMLcolor` `HTMLstyle` code for the row color.

```
7785 \def\LWR@rowHTMLcolor{}%
```

`\LWR@cellHTMLcolor` `HTMLstyle` code for the cell color.

```
7786 \def\LWR@cellHTMLcolor{}%
```

\LWR@ruleHTMLcolor HTML style code for the cell color.

7787 \newcommand*{\LWR@ruleHTMLcolor}{}{}

\rowcolor [*model*] {*color*} [*left overhang*] [*right overhang*] Print version. The HTML version is in `lwarp-colortbl`. Used before starting a tabular data cell, thus `\LWR@getmynexttoken`.

7788 \newcommand*{\rowcolor}{\LWR@getmynexttoken}{}

\arrayrulecolor [*model*] {*color*}

\arrayrulecolornexttoken [*model*] {*color*}

Print versions for use outside and inside a tabular:

7789 \newcommand{\arrayrulecolor}[2][named]{}{}

7790 \newcommand{\arrayrulecolornexttoken}[2][named]{\LWR@getmynexttoken}{}

\doublerulesepcolor [*model*] {*color*}

\doublerulesepcolornexttoken [*model*] {*color*}

Print versions for use inside and outside a tabular:

7791 \newcommand{\doublerulesepcolor}[2][named]{}{}

7792 \newcommand{\doublerulesepcolornexttoken}[2][named]{\LWR@getmynexttoken}{}

72.17 Starting a new row

\LWR@maybenewtablerow If have not yet started a new table row, begin one now. Creates a new row tag, adding a class for `hline` or `tbrule` if necessary.

7793 \newcommand*{\LWR@maybenewtablerow}{}{}

7794 {%

7795 \ifbool{\LWR@startedrow}{%

7796 {}% started the row

7797 {}% not started the row

Remember that now have started the row:

7798 \global\booltrue{\LWR@startedrow}{}

Create the row tag, with a class if necessary.

7799 \global\booltrue{\LWR@intabularmetadata}{}

7800 \ifboolexpr{%

7801 test{\ifnumcomp{\value{\LWR@hlines}}{>}{0}} or%

7802 test{\ifnumcomp{\value{\LWR@hdashedlines}}{>}{0}}{}}

7803 }{}

```

7804      {%
7805          \LWR@htmltag{tr class="hline" }%
7806          \LWR@orignewline%
7807      }%
7808      {% not doing hline

7812                      \LWR@htmltag{tr class="tbrule" }%
7813                  }{%
7814                      \LWR@htmltag{%
7815                          tr class="tbrule" % space
7816                          style="border-top: 1px solid % space
7817                              \LWR@origpound\LWR@ruleHTMLcolor "%
7818                      }%
7819                  }%
7820                  \LWR@orignewline%
7821              }%
7822              {\LWR@htmltag{tr}\LWR@orignewline}%
7823          }% end of not doing hline
7824      }% end of not started the row
7825 }

```

72.18 Printing vertical bar tags

\LWR@printbartag {*index*}

Adds to a tabular data cell an HTML class name for a left/right vertical bar.

```

7826 \newcommand*{\LWR@printbartag}[1]{%
7827 \LWR@traceinfo{\LWR@printbartag !#1!}%
7828 \ifboolexpr{bool{\LWR@tabularmutemods} or bool{\LWR@emptyatbang}}{%
7829 {}% muting or empty
7830 {}% not muting
7831     \edef\tempone{\LWR@getexpparray{\LWR@colbarspec}{#1}}%
7832     \ifdefempty{\tempone}{}{\LWR@tempone}%
7833 }% not muting
7834 \LWR@traceinfo{\LWR@printbartag done}%
7835 }

```

72.19 Printing at or bang tags

\LWR@printatbang {*at-or-bang*} {*index*}

```
7836 \newcommand*{\LWR@printatbang}[2]{%
```

Fetch the column at or bang spec:

```

7837 \xdef\atbangspec{\LWR@getexpparray{\LWR@col#1spec}{#2}}%
7838 \LWR@traceinfo{atbang: #2 !\LWR@atbangspec!}%

```

Only generate if is not empty;

```

7839 \ifdefempty{\LWR@atbangspec}%
7840 {}%
7841 {%
7842     \LWR@htmltag{%
7843         td class="td#1%
7844             \LWR@subaddcmidruletrim{}{}%
7845             \LWR@printbartag{\#2}%
7846             "%
7847             \LWR@tdstartstyles%
7848             \LWR@addcmidrulewidth%
7849             \LWR@addcdashline%
7850             \LWR@addtabularrulecolors%
7851             \LWR@tdendstyles%
7852     }%

```

Create an empty cell if muting for the \bottomrule:

```

7853     \ifboolexpr{bool{\LWR@tabularmutemods} or bool{\LWR@emptyatbang}}{%
7854     {}%
7855     {\LWR@atbangspec}%
7856 }%
7857     \LWR@htmltag{/td}\LWR@orignewline%
7858     \global\booltrue{\LWR@tabularcelladded}%
7859 }% not empty
7860 }%

```

\LWR@addleftmostbartag

```

7861 \newcommand*{\LWR@addleftmostbartag}{%
7862 \ifnumcomp{\value{\LWR@tableLaTeXcolindex}}{=}{1}{%
7863     \LWR@printbartag{leftedge}%
7864 }{%
7865 }

```

\LWR@tabularleftedge

```

7866 \newcommand*{\LWR@tabularleftedge}{%
7867 \ifnumcomp{\value{\LWR@tableLaTeXcolindex}}{=}{1}{%
7868 {%
7869     \LWR@printatbang{at}{leftedge}%
7870     \LWR@printatbang{bang}{leftedge}%
7871 }% left edge
7872 }% not left edge
7873 }

```

72.20 Data opening tag

\LWR@thiscolspec Temporary storage.

```
7874 \newcommand*{\LWR@thiscolspec}{}%
```

\LWR@tabledatasinglecolumntag Print a table data opening tag with style for alignment and color.

```

7875 \newcommand*\LWR@tabledatasinglecolumntag{%
7876 {%
7877 \LWR@traceinfo{\LWR@tabledatasinglecolumntag}%
7878 \LWR@maybenewtablerow%
```

Don't start a new paragraph tag if have already started one:

```

7879 \ifbool{\LWR@intabularmetadata}{%
7880 {%
```

If have found the end of tabular command, do not create the next data cell:

```

7881 \ifbool{\LWR@exittingtabular}{%
7882 {%
    \LWR@not exiting tabular}
```

Print the @ and ! contents before first column:

```

7883 \LWR@tabularleftedge%
```

Fetch the current column's alignment character into \LWR@strresult:

```

7884 \xdef\LWR@strresult{%
7885     \LWR@getexpparray{\LWR@tablecolsing}{\arabic{\LWR@tableLaTeXcolindex}}%
7886 }%
```

print the start of a new table data cell:

```

7887 \LWR@traceinfo{\LWR@tabledatasinglecolumntag: about to print td tag}%
7888     \LWR@htmlltag{td class="td"}
```

append this column's spec:

```

7889 \LWR@strresult%
```

If this column has a cmidrule, add "rule" to the end of the HTML class tag. Also add vertical bar tags.

```

7890 \LWR@addcmidruletrim%
7891 \LWR@addleftmostbartag%
7892 \LWR@printbartag{\arabic{\LWR@tableLaTeXcolindex}}%
7893 "%
```

Add styles for rules, alignment:

```

7894 \LWR@tdstartstyles%
7895 \LWR@addcmidrulewidth%
7896 \LWR@addcdashline%

7897 \xdef\LWR@thiscolsing{%
7898     \LWR@getexpparray{\LWR@tablecolsing}{\arabic{\LWR@tableLaTeXcolindex}}%
```

```
7899      }%
7900      \LWR@addformatwpalignment{\LWR@thiscolspec}%
```

Add styles for cell and rule colors:

```
7901      \LWR@addtabularrowcolor%
7902      \LWR@addtabularrulecolors%
7903      \LWR@tdendstyles%
7904      }% HTML td
7905      \LWR@traceinfo{LWR@tabledatasinglecolumntag: done printing td tag}%

```

If this is a p, m, b, or X column, allow paragraphs:

```
7906      \ifboolexpr{%
7907          test{ \ifdefstring{\LWR@strresult}{p} } or
7908          test{ \ifdefstring{\LWR@strresult}{m} } or
7909          test{ \ifdefstring{\LWR@strresult}{b} } or
7910          test{ \ifdefstring{\LWR@strresult}{P} } or
7911          test{ \ifdefstring{\LWR@strresult}{M} } or
7912          test{ \ifdefstring{\LWR@strresult}{B} } or
7913          test{ \ifdefstring{\LWR@strresult}{X} }%
7914      }%
7915      {%
7916          \LWR@traceinfo{LWR@tabledatasinglecolumntag: about to LWR@startpars}%
7917          \global\booltrue{LWR@tableparcell}%
7918          \LWR@startpars%

7929  }{}%
7930 \LWR@traceinfo{LWR@tabledatasinglecolumntag: done}%
7931 }%
```

72.21 Midrules

- LWR@midrules LWR@midrules is a data array (section 42) of columns each containing a non-zero width if a midrule should be created for this column.
- LWR@trimlrules LWR@trimlrules is a data array (section 42) of columns containing l if a midrule should be left trimmed for each column.
- LWR@trimrrules LWR@trimrrules is a data array (section 42) of columns containing r if a midrule

should be right trimmed for each column.

`LWR@cdashlines` `LWR@cdashlines` is a data array (section 42) of columns each containing a Y if an `arydshln` package "cdashed line" should be created for this column.

`Ctr LWR@midrulecounter` Indexes across the `LWR@midrules` and `LWR@trim<l/r>rules` data arrays.

```
7932 \newcounter{LWR@midrulecounter}
```

`Len \LWR@heavyrulewidth` The default width of the rule.

```
7933 \newlength{\LWR@heavyrulewidth}
7934 \setlength{\LWR@heavyrulewidth}{.08em}
```

`Len \LWR@lightrulewidth` The default width of the rule.

```
7935 \newlength{\LWR@lightrulewidth}
7936 \setlength{\LWR@lightrulewidth}{.05em}
```

`Len \LWR@cmidrulewidth` The default width of the rule.

```
7937 \newlength{\LWR@cmidrulewidth}
7938 \setlength{\LWR@cmidrulewidth}{.03em}
```

`Len \LWR@thiscmidrulewidth` The width of the next rule, defaulting to `\LWR@cmidrulewidth`.

If not `\LWR@cmidrulewidth`, a style will be used to generate the custom width.

Assigned from the `LWR@midrules` array.

```
7939 \newlength{\LWR@thiscmidrulewidth}
7940 \setlength{\LWR@thiscmidrulewidth}{\LWR@cmidrulewidth}
```

`\LWR@clearmidrules` Start new midrules. Called at beginning of tabular and also at `\``.

Clears all `LWR@midrules` and `LWR@trimrules` markers for this line.

```
7941 \newcommand*\LWR@clearmidrules{%
7942 {%
7943 \setcounter{LWR@midrulecounter}{1}%
7944 \whileboolexpr{%

7986     \addtocounter{LWR@midrulecounter}{1}%
7987 }% whiledo
```

```
7988 \global\booltrue{LWR@doingcmidrule}%
7989 }
```

\LWR@docdashline {⟨leftcolumn-rightcolumn⟩}

Marks LWR@cdashlines data array elements to be Y from left to right columns.

```
7990 \NewDocumentCommand{\LWR@docdashline}{%
7991   >{\SplitArgument{1}{-}m}%
7992   {%
7993     \LWR@subcdashline#1%
7994   }}
```

Used to compute margins, tabular trims, column offsets:

```
7995 \newlength{\LWR@templengthone}%
7996 \newlength{\LWR@templengthtwo}%
7997 \newlength{\LWR@templengththree}%
7998 \newcounter{\LWR@tempcountone}
```

Used to add a style to a table data cell:

```
7999 \newbool{\LWR@tdhavecellstyle}
```

\LWR@tdstartstyles Begins possibly adding a table data cell style.

```
8000 \newcommand*{\LWR@tdstartstyles}{\global\boolfalse{\LWR@tdhavecellstyle}}
```

\LWR@tdaddstyle Starts adding a table data cell style.

```
8001 \newcommand*{\LWR@tdaddstyle}{%
8002 \ifbool{\LWR@tdhavecellstyle}{%
8003 ; }%
8004 { style=""}%
8005 \booltrue{\LWR@tdhavecellstyle}%
8006 }
```

\LWR@tdendstyles Finishes possibly adding a table data cell style. Prints the closing quote.

```
8007 \newcommand*{\LWR@tdendstyles}{%
8008 \ifbool{\LWR@tdhavecellstyle}{%
8009 "%%
8010 \global\boolfalse{\LWR@tdhavecellstyle}%
8011 }{}%
8012 }
```

\LWR@subaddcmidruletrim {⟨lefttrim⟩} {⟨righttrim⟩} Adds a \cmidrule with optional trim.

```
8013 \newcommand*{\LWR@subaddcmidruletrim}[2]{%
8014 \setlength{\LWR@templengthone}{%
```

```

8015      \LWR@getexpparray{\LWR@midrules}{\arabic{\LWR@tableLaTeXcolindex}}%
8016 }%
8017 \ifdimcomp{\LWR@templengthone}{>}{0pt}%
8018 {%

```

Print the class with left and right trim letters appended:

```

8019 \LWR@origtilde tdrule#1#2%

```

Remember the width of the rule:

```

8020 \setlength{\LWR@thiscmidrulewidth}{\LWR@templengthone}%
8021 }%
8022 {%
8023 \setlength{\LWR@thiscmidrulewidth}{0pt}%
8024 }%
8025 }

```

\LWR@addcmidruletrim Adds left or right trim to a \cmidrule.

```

8026 \newcommand*{\LWR@addcmidruletrim}{%
8027 \LWR@subaddcmidruletrim%
8028 {\LWR@getexpparray{\LWR@trimlrules}{\arabic{\LWR@tableLaTeXcolindex}}}}%
8029 {\LWR@getexpparray{\LWR@trimrrules}{\arabic{\LWR@tableLaTeXcolindex}}}}%
8030 }

```

\LWR@addrulewidth {*thiswidth*} {*defaultwidth*}

If not default width, add a custom style with width and color depending on *thiswidth*.

Must be placed between \LWR@tdstartstyles and \LWR@tdendstyles.

```

8031 \newcommand{\LWR@addrulewidth}[2]{%

```

Only add a custom width if *thiswidth* is different than the *defaultwidth*, or if a color is being used:

```

8032 \ifboolexpr{%
8033   test{\ifdimcomp{\#1}{=}{0pt}} or
8034   (
8035     ( test{\ifdimcomp{\#1}{=}{\#2}} and not bool{FormatWP} )
8036     and ( test {\ifdefvoid{\LWR@ruleHTMLcolor}} )
8037   )
8038 }%
8039 {}% default width and color
8040 {}% custom width and/or color

```

Ensure that the width is wide enough to display in the browser:

```

8041 \LWR@forceminwidth{\#1}%

```

Begin adding another style:

```
8042 \LWR@tdaddstyle%
```

The style itself:

```
8043 border-top:\LWR@printlength{\LWR@atleastonept} solid %
```

If default gray, the darkness of the color depends on the thickness of the rule:

```
8044 \ifdefvoid{\LWR@ruleHTMLcolor}{%
8045   \ifdimcomp{#1}{<}{\LWR@lightrulewidth}{%
8046     {\LWR@origpound{}A0A0A0}{%
8047       {%
8048         \ifdimcomp{#1}{<}{\LWR@heavyrulewidth}{%
8049           {\LWR@origpound{}808080}{%
8050             {black}{%
8051               {%
8052                 \LWR@origpound{\LWR@ruleHTMLcolor}{%
8053               }{%
8054             }{%
8055           }{custom width and/or color}{%
8056         }{%
8057       }{%
8058     }{%
8059   }{%
8060 }
```

\LWR@addcmidrulewidth Adds a style for the rule width.

Must be placed between \LWR@tdstartstyles and \LWR@tdendstyles.

```
8057 \newcommand{\LWR@addcmidrulewidth}{%
8058 \LWR@addrulewidth{\LWR@thiscmidrulewidth}{\LWR@cmidrulewidth}{%
8059 }}
```

\LWR@addcdashline Must be placed between \LWR@tdstartstyles and \LWR@tdendstyles.

```
8060 \newcommand{\LWR@addcdashline}{%
8061 \edef\LWR@tempone{%
8062   \LWR@getexparray{\LWR@cdashlines}{\arabic{\LWR@tableTeXcolindex}}{%

8097             }%
8098         }%
8099         {%
8100             explicit row color
8101             \LWR@tdaddstyle%
8102             background:\LWR@origpound\LWR@rowHTMLcolor%
8103         }%
8104     }%
8105 }

```

`\LWR@addtabularhrulecolor` Adds a cell's horizontal rule color style, if needed.

```
8104 \newcommand*{\LWR@addtabularhrulecolor}{%
```

If either form of horizontal rule is requested:

```

8105 \ifboolexpr{%
8106     test{\ifnumcomp{\value{\LWR@hlines}}{>}{0}} or%
8107     test{\ifnumcomp{\value{\LWR@hdashedlines}}{>}{0}} or%
8108     bool{\LWR@doingtbrule}%
8109 }{%

```

If there is a no custom color:

```

8110  \ifdefvoid{\LWR@ruleHTMLcolor}%
8111  {%
8112    \ifnumcomp{\value{LWR@hlines}}{>}{1}%
8113    {%
8114      \LWR@tdaddstyle%
8115      border-top: 4px double%
8116    }{%
8117      \ifnumcomp{\value{LWR@hdashedlines}}{>}{1}%
8118      {%
8119        \LWR@tdaddstyle%
8120        border-top: 2px dashed%
8121      }{%
8122        \ifnumcomp{\value{LWR@hdashedlines}}{=}{1}%
8123        {%
8124          \LWR@tdaddstyle%
8125          border-top: 1px dashed%
8126        }{}}}}%

```

If no color and not doubled or dashed, then add nothing, since a simpler rule is the default.

```
8127  }%
```

If there is a custom color:

```

8128  {%
8129    \ifnumcomp{\value{LWR@hlines}}{>}{1}%
8130    {%
8131      \LWR@tdaddstyle%
8132      border-top: 4px double \LWR@origpound\LWR@ruleHTMLcolor%
8133    }{%
8134      \ifnumcomp{\value{LWR@hdashedlines}}{>}{1}%
8135      {%
8136        \LWR@tdaddstyle%
8137        border-top: 2px dashed \LWR@origpound\LWR@ruleHTMLcolor%
8138      }{%
8139        \ifnumcomp{\value{LWR@hdashedlines}}{=}{1}%
8140        {%
8141          \LWR@tdaddstyle%
8142          border-top: 1px dashed \LWR@origpound\LWR@ruleHTMLcolor%
8143        }{%
8144          \LWR@tdaddstyle%
8145          border-top: 1px solid \LWR@origpound\LWR@ruleHTMLcolor%
8146        }}}}}%
8147  }%
8148 }{}}%
8149 }

```

`\LWR@addtabularrulecolors` Adds a cell's rule color styles, if needed.

No color is added for the final row of empty cells which finishes each tabular.

```
8150 \newcommand*{\LWR@addtabularrulecolors}{%
```

Custom horizontal rule color:

```
8151 \LWR@addtabularhrulecolor%
```

No vertical rules if finishing the tabular with a row of empty cells:

```
8152 \ifbool{\LWR@tabularmutemods}{ }{ %
```

If at the leftmost cell, possibly add a leftmost vertical rule:

```
8153 \ifnumequal{\value{\LWR@tableLaTeXcolindex}}{1}{ %
```

Fetch the left edge's vertical bar specification:

```
8154 \edef\LWR@tempone{\LWR@getexpparray{\LWR@colbarspec}{leftedge}}%
```

Add a custom style if a vertical bar was requested:

```
8155 \ifdefstring{\LWR@tempone}{tvertbarl}{ %
8156   \LWR@tdaddstyle%
8157   border-left: 1px solid % space
8158   \LWR@verruleHTMLcolor%
8159 }{ %
8160 \ifdefstring{\LWR@tempone}{tvertbarldouble}{ %
8161   \LWR@tdaddstyle%
8162   border-left: 4px double % space
8163   \LWR@verruleHTMLcolor%
8164 }{ %
8165 \ifdefstring{\LWR@tempone}{tvertbarldash}{ %
8166   \LWR@tdaddstyle%
8167   border-left: 1px dashed % space
8168   \LWR@verruleHTMLcolor%
8169 }{ %
8170 \ifdefstring{\LWR@tempone}{tvertbarldoubledash}{ %
8171   \LWR@tdaddstyle%
8172   border-left: 2px dashed % space
8173   \LWR@verruleHTMLcolor%
8174 }{ %
8175 }
```

Possibly add a right vertical rule for this cell:

```
8176 \edef\LWR@tempone{ %
8177   \LWR@getexpparray{\LWR@colbarspec}{\arabic{\LWR@tableLaTeXcolindex}}%
8178 }%
8179 \ifdefstring{\LWR@tempone}{tvertbarr}{ %
```

Add a custom style if a vertical bar was requested:

```
8180 \LWR@tdaddstyle%
8181 border-right: 1px solid \LWR@verruleHTMLcolor%
8182 }{ %
8183 \ifdefstring{\LWR@tempone}{tvertbarrdouble}{ %
8184   \LWR@tdaddstyle%
```

```

8185         border-right: 4px double \LWR@vertruleHTMLcolor%
8186     }{ }%
8187     \ifdefstring{\LWR@tempone}{tvertbarrdash}{%
8188         \LWR@tdaddstyle%
8189         border-right: 1px dashed \LWR@vertruleHTMLcolor%
8190     }{ }%
8191     \ifdefstring{\LWR@tempone}{tvertbarrdoubledash}{%
8192         \LWR@tdaddstyle%
8193         border-right: 2px dashed \LWR@vertruleHTMLcolor%
8194     }{ }%
8195 }{ }%
8196 }

```

\ctr \LWR@cellcolordepth Counts how many cell color <div>s were added to the current tabular data cell.

```
8197 \newcounter{\LWR@cellcolordepth}
```

\LWR@subaddtabularcellcolor {<HTML color>}

```

8198 \newcommand*{\LWR@subaddtabularcellcolor}[1]{%
8199 \LWR@htmltag{div class="cellcolor" style="%
8200     background:\LWR@origpound{}{}#1 %

8202 \addtocounter{\LWR@cellcolordepth}{1}%
8203 }

```

\LWR@addtabularcellcolor Adds a cell color style, if needed.

```

8204 \newcommand*{\LWR@addtabularcellcolor}{%
8205 \ifdefvoid{\LWR@cellHTMLcolor}{%
8206 { }%
8207     \ifdefvoid{\LWR@rowHTMLcolor}{%
8208         { }%
8209         \ifdefvoid{\LWR@xcolorrowHTMLcolor}{%
8210             { }%
8211             \ifdefvoid{\LWR@columnHTMLcolor}{%
8212                 { }%
8213                 {\LWR@subaddtabularcellcolor{\LWR@columnHTMLcolor}}%
8214             }%
8215             {\LWR@subaddtabularcellcolor{\LWR@xcolorrowHTMLcolor}}%
8216         }%
8217         {\LWR@subaddtabularcellcolor{\LWR@rowHTMLcolor}}%
8218     }%
8219 {\LWR@subaddtabularcellcolor{\LWR@cellHTMLcolor}}%
8220 }

```

72.23 Multicolumns

72.23.1 Parsing multicolumns

```
8221 \newcounter{\LWR@tablemulticolwidth}
```

Indexes into the multicolumn specification:

```
8222 \newcounter{LWR@tablemulticolspos}
```

Remembers multicolumn vertical rules if found in the column spec.

```
8223 \newcounter{LWR@mcolvertbarsl}
8224 \newcounter{LWR@mcolvertbarsr}
8225 \newcounter{LWR@mcolvertbarsldash}
8226 \newcounter{LWR@mcolvertbarsrdash}
8227 \newbool{LWR@mcolvertbaronleft}%
```

\LWR@printmccoltype {*<colspec>*} Print any valid column type found. Does not print @, !, >, or < columns or their associated tokens.

This is printed as part of the table data tag's class.

```
8228 \newcommand*{\LWR@printmccoltype}[1]{%
8229 \LWR@traceinfo{lwr@printmccoltype -#1-}%
}
```

Get one token of the column spec:

```
8230 \StrChar{#1}{\arabic{LWR@tablemulticolspos}}[\LWR@strresult]%
```

Add to the HTML tag depending on which column type is found:

```
8231 \IfStrEq{\LWR@strresult}{l}{l}{%
8232 \IfStrEq{\LWR@strresult}{c}{c}{%
8233 \IfStrEq{\LWR@strresult}{r}{r}{%
8234 \IfStrEq{\LWR@strresult}{p}{p}{%
8235 \IfStrEq{\LWR@strresult}{m}{m}{%
8236 \IfStrEq{\LWR@strresult}{b}{b}{%
8237 \IfStrEq{\LWR@strresult}{P}{P}{%
8238 \IfStrEq{\LWR@strresult}{M}{M}{%
8239 \IfStrEq{\LWR@strresult}{B}{B}{%
8240 \IfStrEq{\LWR@strresult}{w}{w}{%
8241 \IfStrEq{\LWR@strresult}{W}{W}{%
8242 \IfStrEq{\LWR@strresult}{S}{c}{%
8243 \IfStrEq{\LWR@strresult}{s}{c}{%
8244 \IfStrEq{\LWR@strresult}{X}{p}{%
8245 \IfStrEq{\LWR@strresult}{|}{%
8246 {%
8247     \ifbool{LWR@mcolvertbaronleft}{%
8248         {\addtocounter{LWR@mcolvertbarsl}{1}}% left edge
8249         {\addtocounter{LWR@mcolvertbarsr}{1}}% not left edge
8250 }%
8251 {%
8252     \IfStrEq{\LWR@strresult}{:}{%
8253     {%
```

```

8254      \ifbool{LWR@mcolvertbaronleft}%
8255          {\addtocounter{LWR@mcolvertbarsldash}{1}}% left edge
8256          {\addtocounter{LWR@mcolvertbarsrdash}{1}}% not left edge
8257      }%
8258      {%
8259          \IfStrEq{\LWR@strresult}{;}%
8260          {%

8274 \LWR@stoppars%
8275 }

```

\LWR@multicolother {*colspec*} For @, !, >, <, print the next token without paragraph tags:

```

8276 \newcommand*{\LWR@multicolother}[1]{%
8277 \addtocounter{LWR@tablemulticolspos}{1}%
8278 \StrChar{#1}{\arabic{LWR@tablemulticolspos}}[\LWR@strresult]%
8279 \LWR@strresult%

```

A valid column data type was found:

```

8280 \global\booltrue{LWR@validtablecol}%
8281 }

```

\LWR@multicolskip Nothing to print for this column type.

```

8282 \newcommand*{\LWR@multicolskip}{%

```

A valid column data type was found:

```

8283 \global\booltrue{LWR@validtablecol}%
8284 }

```

\LWR@printmccoldata {*colspec*} Print the data for any valid column type found.

```

8285 \newcommand*{\LWR@printmccoldata}[1]{%
8286 \LWR@traceinfo{lwr@printmccoldata -#1}%

```

Not yet found a valid column type:

```
8287 \global\boolfalse{LWR@validtablecol}%
```

Get one token of the column spec:

```
8288 \StrChar{\#1}{\arabic{LWR@tablemulticolspos}}[\LWR@strresult]%
```

Print the text depending on which column type is found. Also handles @, >, < as it comes to them.

```
8289 \IfStrEq{\LWR@strresult}{l}{\LWR@multicoltext}{}%
8290 \IfStrEq{\LWR@strresult}{c}{\LWR@multicoltext}{}%
8291 \IfStrEq{\LWR@strresult}{r}{\LWR@multicoltext}{}%
8292 \IfStrEq{\LWR@strresult}{D}{%
8293 \addtocounter{LWR@tablemulticolspos}{3}%
8294 \LWR@multicoltext%
8295 }{}%
```

```
8296 \IfStrEq{\LWR@strresult}{p}{\LWR@multicolpartext{2}}{}%
8297 \IfStrEq{\LWR@strresult}{m}{\LWR@multicolpartext{2}}{}%
8298 \IfStrEq{\LWR@strresult}{b}{\LWR@multicolpartext{2}}{}%
8299 \IfStrEq{\LWR@strresult}{P}{\LWR@multicolpartext{2}}{}%
8300 \IfStrEq{\LWR@strresult}{M}{\LWR@multicolpartext{2}}{}%
8301 \IfStrEq{\LWR@strresult}{B}{\LWR@multicolpartext{2}}{}%
```

```
8302 \IfStrEq{\LWR@strresult}{w}{\LWR@multicolpartext{3}}{}%
8303 \IfStrEq{\LWR@strresult}{W}{\LWR@multicolpartext{3}}{}%
```

```
8304 \IfStrEq{\LWR@strresult}{S}{\LWR@multicoltext}{}%
8305 \IfStrEq{\LWR@strresult}{s}{\LWR@multicoltext}{}%
```

```
8306 \IfStrEq{\LWR@strresult}{X}{\LWR@multicolpartext{1}}{}%
8307 \IfStrEq{\LWR@strresult}{|}{\LWR@multicolskip}{}%
8308 \IfStrEq{\LWR@strresult}{:}{\LWR@multicolskip}{}%
8309 \IfStrEq{\LWR@strresult}{;}{%
8310 \LWR@multicolskip%
8311 \addtocounter{LWR@tablemulticolspos}{1}%
8312 }{}%
```

```
8313 \IfStrEq{\LWR@strresult}{\detokenize{@}}{\LWR@multicolother{#1}}{}%
8314 \IfStrEq{\LWR@strresult}{\detokenize{!}}{\LWR@multicolother{#1}}{}%
8315 \IfStrEq{\LWR@strresult}{\detokenize{>}}{\LWR@multicolother{#1}}{}%
8316 \IfStrEq{\LWR@strresult}{\detokenize{<}}{\LWR@multicolother{#1}}{}%
```

If an invalid column type:

```
8317 \ifbool{LWR@validtablecol}{}{\LWR@multicoltext}%
```

Tracing:

```
8318 \LWR@traceinfo{lwr@printmccoldata done}%
8319 }
```

```
\parsemulticolumnalignment {\{1: colspec\}} {\{2: printresults\}}
```

Scan the multicolumn specification and execute the printfunction for each entry.

Note that the spec for a p{spec} column, or @, >, <, is a token list which will NOT match l, c, r, or p.

```
8320 \newcommand*{\LWR@parsemulticolumnalignment}[2]{%
8321   \setcounter{LWR@tablemulticolspos}{1}%
8322   \StrLen{\#1}[\LWR@strresult]%
8323   \setcounter{LWR@tablemulticolwidth}{\LWR@strresult}%
```

Scan across the tokens in the column spec:

```
8324 \whileboolexpr{%
8325   not test {%
8326     \ifnumcomp{\value{LWR@tablemulticolspos}}{>}{%
8327       {\value{LWR@tablemulticolwidth}}%
8328     }%
8329   }%
8330 {%
```

Execute the assigned print function for each token in the column spec:

```
8331 #2{\#1}%
```

Move to the next token in the column spec:

```
8332 \addtocounter{LWR@tablemulticolspos}{1}%
8333 }%
8334 }
```

72.23.2 Multicolumn factored code

```
\LWR@addmulticolverrulecolor
```

```
8335 \newcommand*{\LWR@addmulticolverrulecolor}{%
```

No vertical rules if finishing the tabular with a row of empty cells:

```
8336 \ifbool{\LWR@tabularmutemods}{}{%
```

Left side:

```
8337   \ifnumcomp{\value{LWR@mcolvertbarsl}}{=}{1}{%
8338     \LWR@tdaddstyle%
8339     border-left: 1px solid \LWR@verruleHTMLcolor%
8340   }%
8341   \ifnumcomp{\value{LWR@mcolvertbarsl}}{>}{1}{%
8342     \LWR@tdaddstyle%

8355   border-right: 1px solid \LWR@vertruleHTMLcolor%
8356 }{%
8357 \ifnumcomp{\value{LWR@mclovertbarsr}}{>}{1}{%
8358   \LWR@tdaddstyle%
8359   border-right: 4px double \LWR@vertruleHTMLcolor%
8360 }{%
8361 \ifnumcomp{\value{LWR@mclovertbarsrdash}}{=}{1}{%
8362   \LWR@tdaddstyle%
8363   border-right: 1px dashed \LWR@vertruleHTMLcolor%
8364 }{%
8365 \ifnumcomp{\value{LWR@mclovertbarsrdash}}{>}{1}{%
8366   \LWR@tdaddstyle%
8367   border-right: 2px dashed \LWR@vertruleHTMLcolor%
8368 }{%
8369 }%
8370 }

8371 \newcommand{\LWR@multicoltext}{}%

```

To find multicolumn right trim:

```

8372 \newcounter{LWR@lastmulticolumn}

\LWR@domulticolumn [⟨1: vpos⟩] [⟨2: #rows⟩] {⟨3: numLaTeXcols⟩} {⟨4: numHTMLcols⟩} {⟨5: colspec⟩}
{⟨6: text⟩}

8373 \NewDocumentCommand{\LWR@domulticolumn}{o o m m m +m}{%
8374 \LWR@traceinfo{LWR@domulticolumn -#1- -#2- -#4- -#5-}%

```

Remember the text to be inserted, and remember that a valid column type was found:

```

8375 \renewcommand{\LWR@multicoltext}{%
8376 #6%
8377 \global\booltrue{LWR@validtablecol}%
8378 }%

```

Compute the rightmost column to be included. This is used to create the right trim.

```

8379 \setcounter{LWR@lastmulticolumn}{\value{LWR@tableLaTeXcolindex}}%
8380 \addtocounter{LWR@lastmulticolumn}{#3}%
8381 \addtocounter{LWR@lastmulticolumn}{-1}%

```

Row processing:

```
8382 \LWR@maybenewtablerow%
```

Begin the opening table data tag:

```
8383 \LWR@htmlltag{td colspan="#4" %
```

```
8384 \IfValueT{#2}{ % rows?
```

```
8385 rowspan="#2" %
```

```
8386 \IfValueT{#1}{% vpos?
```

```
8387 \ifstrequal{#1}{b}{style="\LWR@print@mbox{vertical-align:bottom}" }{}%
```

```
8388 \ifstrequal{#1}{t}{style="\LWR@print@mbox{vertical-align:top}" }{}%
```

```
8389 }% vpos?
```

```
8390 }% rows?
```

```
8391 class="td%"
```

Print the column type and vertical bars:

```
8392 \setcounter{LWR@mcolvertbarsl}{0} %
```

```
8393 \setcounter{LWR@mcolvertbarsr}{0} %
```

```
8394 \setcounter{LWR@mcolvertbarsldash}{0} %
```

```
8395 \setcounter{LWR@mcolvertbarsrdash}{0} %
```

```
8396 \booltrue{LWR@mcolvertbaronleft} %
```

```
8397 \LWR@parsemulticolumnalignment{#5}{\LWR@printmccoltype} %
```

If this column has a cmidrule, add “rule” to the end of the HTML class tag.

If this position had a “Y” then add “rule” for a horizontal rule:

```
8398 \LWR@subaddcmidruletrim%
```

```
8399 {\LWR@getexparray{\LWR@trimlrules}{\arabic{\LWR@tableTeXcolindex}}} %
```

```
8400 {\LWR@getexparray{\LWR@trimrrules}{\arabic{\LWR@lastmulticolumn}}} %
```

Also add vertical bar class.

```
8401 \ifnumcomp{\value{LWR@mcolvertbarsl}}{=}{1}{ tvertbarl}{}%
```

```
8402 \ifnumcomp{\value{LWR@mcolvertbarsl}}{>}{1}{ tvertbarldouble}{}%
```

```
8403 \ifnumcomp{\value{LWR@mcolvertbarsr}}{=}{1}{ tvertbarr}{}%
```

```
8404 \ifnumcomp{\value{LWR@mcolvertbarsr}}{>}{1}{ tvertbarrdouble}{}%
```

```
8405 \ifnumcomp{\value{LWR@mcolvertbarsldash}}{=}{1}{ tvertbarldash}{}%
```

```
8406 \ifnumcomp{\value{LWR@mcolvertbarsldash}}{>}{1}{ tvertbarldoubledash}{}%
```

```
8407 \ifnumcomp{\value{LWR@mcolvertbarsrdash}}{=}{1}{ tvertbarrdash}{}%
```

```
8408 \ifnumcomp{\value{LWR@mcolvertbarsrdash}}{>}{1}{ tvertbarrdoubledash}{}%
```

Close the class tag's opening quote: " NOT A TYPO

```
8409 %
```

```
8410 \LWR@tdstartstyles%
```

```

8411 \LWR@addtabulararrowcolor%
8412 \LWR@addcmidrulewidth%
8413 \LWR@addcdashline%
8414 \LWR@addtabularhrulecolor%
8415 \LWR@addmulticolvertrulecolor%
8416 \LWR@addformatwpalignment{-#5}%
8417 \LWR@tdendstyles%
8418 }% end of the opening table data tag
8419 \global\boolfalse{LWR@intabularmetadata}%
8420 \LWR@parsemulticolumnalignment{-#5}{\LWR@printmccoldata}%
8421 }

```

72.23.3 Multicolumn

```

\LWR@htmlmulticolumn {\langle numcols\rangle} {\langle alignment\rangle} {\langle text\rangle}

8422 \NewDocumentCommand{\LWR@htmlmulticolumn}{m m +m}%
8423 {%

```

Figure out how many extra `HTML` columns to add for `@` and `!` columns:

```
8424 \LWR@tabularhtmlcolumns{\arabic{LWR@tableLaTeXcolindex}}{#1}
```

Create the multicolumn tag:

```
8425 \LWR@domulticolumn{#1}{\arabic{LWR@tabhtmlcoltotal}}{#2}{#3}%
```

Move to the next `LATEX` column:

```

8426 \addtocounter{LWR@tableLaTeXcolindex}{#1}%
8427 \addtocounter{LWR@tableLaTeXcolindex}{-1}%

```

Skip any trailing `@` or `!` columns for this cell:

```

8428 \global\booltrue{LWR@skipatbang}%
8429 }

```

72.23.4 Longtable captions

`longtable` captions use `\multicolumn`.

Bool `LWR@starredlongtable` Per the `caption` pacakge, step the counter if `longtable*`.

```

8430 \newbool{LWR@starredlongtable}
8431 \boolfalse{LWR@starredlongtable}

```

Per the `caption` package. User-redefinable float type.

```
8432 \providetcommand*\LTcaptype{table}
```

```
\LWR@longtabledatacaptiontag * [<toc entry>] {<caption>}

8433 \NewDocumentCommand{\LWR@longtabledatacaptiontag}{s o +m}
8434 {%
```

Remember the latest name for \nameref:

```
8435 \IfValueTF{#2}{% optional given?
8436     \ifblank{#2}{% optional empty?
8437         {\LWR@setlatestname{#3}}% empty
8438         {\LWR@setlatestname{#2}}% given and non-empty
8439     }% optional given
8440     {\LWR@setlatestname{#3}}% no optional
```

Create a multicolumn across all the columns:

Figure out how many extra HTML columns to add for @ and ! columns found between the first and the last column:

```
8441 \LWR@tabularhtmlcolumns{1}{\arabic{\LWR@tabletotalLaTeXcols}}
```

Create the multicolumn tag:

```
8442 \LWR@domulticolumn{\arabic{\LWR@tabletotalLaTeXcols}}%
8443     {\arabic{\LWR@tabhtmlcoltotal}}%
8444     {P}%
8445 {%
8446 \LWR@domulticolumn
8446 \IfBooleanTF{#1}{star?}
```

Star version, show a caption but do not make a LOT entry:

```
8447 {%
8448     yes star
8449     \LWR@figcaption%
8450     \LWR@isolate{#3}%
8451     \endLWR@figcaption%
8451 }%
8452 {%
8452     No star:
```

Not the star version:

Don't step the counter if \caption[]{}{A caption.}

```
8453     \ifbool{\LWR@starredlongtable}{%
8454     {%
8455         \ifblank{#2}{% TOC entry
8456             {}%
8457             {%
8458                 \refstepcounter{\LTcaptive}%
8459                 \protected@edef\@currentlabel{%
8460                     \nameuse{p@\LTcaptive}\nameuse{the\LTcaptive}%
8461                 }%
8462             }%
8463         }%
8463     }%
```

Create an HTML caption. Afterwards, maybe make a LOT entry.

```
8464     \LWR@figcaption%
8465     \LWR@isolate{@nameuse{fnum@\LTcaptype}}%
8466     \CaptionSeparator%
8467     \LWR@isolate{#3}%
8468     \endLWR@figcaption%
```

See if an optional caption was given:

```
8469     \ifblank{#2}{ TOC entry empty}
```

if the optional caption was given, but empty, do not form a TOC entry

```
8470     {}%
```

If the optional caption was given, but might only be []:

```
8471     { TOC entry not empty
8472         \IfNoValueTF{#2}{ No TOC entry? }
```

The optional caption is []:

```
8473     { No TOC entry
8474         \addcontentsline%
8475         {@nameuse{ext@\LTcaptype}}%
8476         {\LTcaptype}%
8477         {%
8478             \protect\newline%
8479             {\LWR@isolate{@nameuse{p@\LTcaptype}}\nameuse{the\LTcaptype}}%
8480             {\ignorespaces \LWR@isolate{#3}\protect\relax}%
8481         }%
8482     }% end of No TOC entry
```

The optional caption has text enclosed:

```
8483     { yes TOC entry
8484         \addcontentsline%
8485         {@nameuse{ext@\LTcaptype}}%
8486         {\LTcaptype}%
8487         {%
8488             \protect\newline%
8489             {\LWR@isolate{@nameuse{p@\LTcaptype}}\nameuse{the\LTcaptype}}%
8490             {\ignorespaces \LWR@isolate{#2}\protect\relax}%
8491         }%
8492     }% end of yes TOC entry
8493     }% end of TOC entry not empty
8494 }% end of no star
```

Skip any trailing @ or ! columns for this cell:

```
8495 \global\booltrue{LWR@skipatbang}%
8496 }% end of \LWR@domulticolumn
8497
```

```

8498 \addtocounter{LWR@tableLaTeXcolindex}{\arabic{LWR@tabletotalLaTeXcols}}
8499 \addtocounter{LWR@tableLaTeXcolindex}{-1}
8500
8501 }

```

72.23.5 Counting HTML tabular columns

The L^AT_EX specification for a table includes a number of columns separated by the & character. These columns differ in content from line to line. Additional virtual columns may be specified by the special @ and ! columns. These columns are identical from line to line, but may be skipped during a multicolumn cell.

For HTML output, @ and ! columns are placed into their own tabular columns. Thus, a L^AT_EX \multicolumn command may span several additional @ and ! columns in HTML output. These additional columns must be added to the total number of columns spanned by an HTML multi-column data cell.

```

8502 \newcounter{LWR@tabhtmlcolindex}
8503 \newcounter{LWR@tabhtmlcolend}
8504 \newcounter{LWR@tabhtmlcoltotal}

```

\LWR@subtabularhtmlcolumns {<index>}

Factored from \LWR@tabularhtmlcolumns, which follows.

```
8505 \newcommand*{\LWR@subtabularhtmlcolumns}[1]{%
```

Temporarily define a macro equal to the @ specification for this column:

```
8506 \edef\LWR@atbangspec{\LWR@getexparray{LWR@colatspec}{#1}}%
```

If the @ specification is not empty, add to the count:

```

8507 \ifdefempty{\LWR@atbangspec}%
8508   {}%
8509   {\addtocounter{LWR@tabhtmlcoltotal}{1}}%

```

Likewise for the ! columns:

```

8510 \edef\LWR@atbangspec{\LWR@getexparray{LWR@colbangspec}{#1}}%
8511 \ifdefempty{\LWR@atbangspec}%
8512   {}%
8513   {\addtocounter{LWR@tabhtmlcoltotal}{1}}%
8514 }

```

\LWR@tabularhtmlcolumns {<starting L^AT_EX column>} {<number L^AT_EX columns>}

Compute the total number of HTML columns being spanned, considering the starting L^AT_EX table column and the number of L^AT_EX tabular columns being spanned. Any @ and ! columns within this span are included in the total count. The resulting number of HTML columns is returned in the counter LWR@tabhtmlcoltotal.

```
8515 \newcommand*{\LWR@tabularhtmlcolumns}[2]{%
```

Count the starting index, compute ending index, and begin with the count being the L^AT_EX span, to which additional @ and ! columns may be added:

```
8516 \setcounter{LWR@tabhtmlcolindex}{#1}%
8517 \setcounter{LWR@tabhtmlcoltotal}{#2}%
8518 \setcounter{LWR@tabhtmlcolend}{#1}%
8519 \addtocounter{LWR@tabhtmlcolend}{#2}%
```

If at the left edge, add the at/bang columns for the left edge:

```
8520 \ifnumcomp{\value{LWR@tabhtmlcolindex}}{=}{1}{%
8521     \LWR@subtabularhtmlcolumns{leftedge}%
8522 }{}}
```

Walk across the L^AT_EX columns looking for @ and ! columns:

```
8523 \whileboolexpr{%
8524     test {%
8525         \ifnumcomp{\value{LWR@tabhtmlcolindex}}{<}{\value{LWR@tabhtmlcolend}}{%
8526             }%
8527 }%
8528 }%
8529     \LWR@subtabularhtmlcolumns{\arabic{LWR@tabhtmlcolindex}}%
8530     \addtocounter{LWR@tabhtmlcolindex}{1}%
8531 }% whiledo
8532 }

8533 \end{warpHTML}
```

72.24 Multirow if not loaded

A default defintion in case multirow is not loaded. This is used during table parsing.

```
8534 \begin{warpHTML}
8535 \newcommand{\multirow}[2][c]{}%
8536 \end{warpHTML}
```

72.25 Multicolumnrow

A print-mode version is defined here, and is also used during HTML output while inside a `\teximage`.

See section 341 for the HTML versions.

for HTML & PRINT: 8537 `\begin{warpall}`

```
\multicolumnrow {\langle 1:cols \rangle} {\langle 2:halign \rangle} [\langle 3:vpos \rangle] {\langle 4:numrows \rangle} [\langle 5:bigstruts \rangle] {\langle 6:width \rangle} [\langle 7:fixup \rangle]
{\langle 8:text \rangle}
```

For discussion of the use of \DeclareExpandableDocumentCommand, see:
<https://tex.stackexchange.com/questions/168434/problem-with-abbreviation-of-multirow-and-multicolumn-latex>

\AtBeginDocument to adjust after the user may have loaded multirow, which requires several tests to determine which version is loaded and thus which options are available.

```
8538 \AtBeginDocument{
```

\@ifundefined{@xmultirow} determines if multirow was never loaded.

Null action if not loaded:

```
8539 \@ifundefined{@xmultirow}
8540 {
8541 \DeclareExpandableDocumentCommand{\LWR@print@multicolumnrow}{%
8542   +m +m +O{c} +m +O{0} +m +O{opt} +m}%
8543   {}%
8544 }% no version of multirow was loaded
8545 {%
  \ProvidesPackage{multirow}{2016/09/01}{2016/09/27 for v2.0 or newer}
  \@ifpackagelater{multirow}{2016/09/01}{2016/09/27 for v2.0}{}%
```

\@ifpackagelloaded{multirow} determines if v2.0 or later of multirow was used, which included the \ProvidesPackage macro.

The print version:

```
8546 \@ifpackagelloaded{multirow}{%
  \ProvidesPackage{multirow}{2016/09/01}{2016/09/27 for v2.0 or newer}
  \@ifpackagelater{multirow}{2016/09/01}{2016/09/27 for v2.0}{}%
  \LWR@print@multicolumnrow{%
    +m +m +O{c} +m +O{0} +m +O{opt} +m}%
  {\multicolumn{#1}{#2}{\@xmultirow[#3]{#4}{#5}{#6}{#7}{#8}}}%
}
8553 {%
  \ProvidesPackage{multirow}{2016/09/01}{2016/09/27 for v2.0 or newer}
  \LWR@print@multicolumnrow{%
    +m +m +O{c} +m +O{0} +m +O{opt} +m}%
  {\multicolumn{#1}{#2}{\@xmultirow[#4]{#5}{#6}{#7}{#8}}}%
}
```

If not \@ifpackagelloaded{multirow} but \@xmultirow is defined, then this must be v1.6 or earlier, which did not \ProvidesPackage{multirow}, and did not have the vposn option.

```
8559 {%
  \ProvidesPackage{multirow}{2016/09/01}{2016/09/27 for v2.0 or newer}
  \LWR@print@multicolumnrow{%
    +m +m +O{c} +m +O{0} +m +O{opt} +m}%
  {\multicolumn{#1}{#2}{\@xmultirow[#4]{#5}{#6}{#7}{#8}}}%
}
8564
8565 }% \@ifundefined{@xmultirow}
8566
8567 \providecommand*\multicolumnrow{\LWR@print@multicolumnrow}
8568
```

```
8569 }% AtBeginDocument
```

```
8570 \end{warpall}
```

72.26 Utility macros inside a table

for HTML output: 8571 \begin{warpHTML}

Used to prevent opening a tabular data cell if the following token is one which does not create tabular data:

```
8572 \newcommand*{\LWR@donothing}{}%
```

In case `array` is not loaded:

```
8573 \let\firsthline\relax
8574 \let\lasthline\relax
8575 \newcommand*{\firsthline}{}%
8576 \newcommand*{\lasthline}{}%
```

In case `bigdelim` is not loaded:

```
8577 \newcommand*{\ldelim}{}%
8578 \newcommand*{\rdelim}{}%
```

```
8579 \end{warpHTML}
```

72.27 Special-case tabular markers

for HTML & PRINT: 8580 \begin{warpall}

\TabularMacro Place this just before inserting a custom macro in a table data cell. Doing so tells `lwarp` not to automatically start a new HTML table data cell yet. See section [8.10.1](#).

```
8581 \newcommand*{\TabularMacro}{}%
```

```
8582 \end{warpall}
```

\ResumeTabular Used to resume tabular entries after resuming an environment.

 **tabular inside another environment** When creating a new environment which contains a `tabular` environment, `lwarp`'s emulation of the `tabular` does not automatically resume when the containing environment ends, resulting in corrupted HTML rows. To fix this, use `\ResumeTabular` as follows. This is ignored in print mode.

```
\StartDefiningTabulars % because & is used in a definition
\newenvironment{outerenvironment}
{
\begin{tabular}{cc}
left & right \\
\end{tabular}
}
\TabularMacro\ResumeTabular
left & right \\
\end{tabular}
}
\StopDefiningTabulars
```

for HTML output: 8583 \begin{warpHTML}

```
8584 \newcommand*{\ResumeTabular}{%
8585 \global\boolfalse{LWR@exittingtabular}%
8586 \global\boolfalse{LWR@tabularmutemods}%
8587 \LWR@getmynexttoken%
8588 }
```

```
8589 \end{warpHTML}
```

for PRINT output: 8590 \begin{warpprint}

```
8591 \newcommand*{\ResumeTabular}{}
8592 \end{warpprint}
```

72.28 Checking for a new table cell

for HTML output: 8593 \begin{warpHTML}

Bool LWR@exittingtabular When \end is found, turns off the next opening data tag.

```
8594 \newbool{LWR@exittingtabular}
```

Bool LWR@tabularmutemods Mutes HTML output for @, !, < and >.

This is used while printing the final row to generate \bottomrules.

```
8595 \newbool{LWR@tabularmutemods}
```

\LWR@tabledatacolumntag Open a new HTML table cell unless the next token is for a macro which does not create data, such as \hline, \toprule, etc:

```
8596 \newcommand*{\LWR@tabledatacolumntag}{%
8597 %
8598 \LWR@traceinfo{\LWR@tabledatacolumntag}%
}
```

\show\LWR@mynexttoken to see what tokens to look for

If not any of the below, start a new table cell:

```
8599 \global\let\LWR@mynextaction\LWR@tabledatasinglecolumntag%
```

If exiting the tabular:

```
8600 \ifdefequal{\LWR@mynexttoken}{\end}%
8601   {\global\booltrue{LWR@exittingtabular}}{}%
```

`longtable` can have a caption in a cell

```
8602 \ifdefequal{\LWR@mynexttoken}{\caption}%
8603   {\global\let\LWR@mynextaction\LWR@donothing}{}%
```

Look for other things which would not start a table cell:

```
8604 \ifdefequal{\LWR@mynexttoken}{\multicolumn}%
8605   {\global\let\LWR@mynextaction\LWR@donothing}{}%
8606 \ifdefequal{\LWR@mynexttoken}{\multirow}%
8607   {\global\let\LWR@mynextaction\LWR@donothing}{}%
8608 \ifdefequal{\LWR@mynexttoken}{\multicolumnrow}%
8609   {\global\let\LWR@mynextaction\LWR@donothing}{}%
8610 \ifdefequal{\LWR@mynexttoken}{\noalign}%
8611   {\global\let\LWR@mynextaction\LWR@donothing}{}%
```

If an `\mrowcell`, this is a cell to be skipped over:

```
8612 \ifdefequal{\LWR@mynexttoken}{\mrowcell}%
8613   {\global\let\LWR@mynextaction\LWR@donothing}{}%
```

If an `\mcolrowcell`, this is a cell to be skipped over:

```
8614 \ifdefequal{\LWR@mynexttoken}{\mcolrowcell}%
8615   {\global\let\LWR@mynextaction\LWR@donothing}{}%
```

```
8616 \ifdefequal{\LWR@mynexttoken}{\TabularMacro}%
8617   {\global\let\LWR@mynextaction\LWR@donothing}{}%
```

```
8618 \ifdefequal{\LWR@mynexttoken}{\hline}%
8619   {\global\let\LWR@mynextaction\LWR@donothing}{}%
```

```
8620 \ifdefequal{\LWR@mynexttoken}{\firsthline}%
8621   {\global\let\LWR@mynextaction\LWR@donothing}{}%
```

```
8622 \ifdefequal{\LWR@mynexttoken}{\lasthline}%
8623   {\global\let\LWR@mynextaction\LWR@donothing}{}%
```

```
8624 \ifdefequal{\LWR@mynexttoken}{\toprule}%
8625   {\global\let\LWR@mynextaction\LWR@donothing}{}%
```

```

8626 \ifdefequal{\LWR@mynexttoken}{\midrule}%
8627   {\global\let\LWR@mynextaction\LWR@donothing}{}%

8628 \ifdefequal{\LWR@mynexttoken}{\cmidrule}%
8629   {\global\let\LWR@mynextaction\LWR@donothing}{}%

8630 \ifdefequal{\LWR@mynexttoken}{\morecmidrules}%
8631   {\global\let\LWR@mynextaction\LWR@donothing}{}%

8632 \ifdefequal{\LWR@mynexttoken}{\specialrule}%
8633   {\global\let\LWR@mynextaction\LWR@donothing}{}%

8634 \ifdefequal{\LWR@mynexttoken}{\cline}%
8635   {\global\let\LWR@mynextaction\LWR@donothing}{}%

8636 \ifdefequal{\LWR@mynexttoken}{\bottomrule}%
8637   {\global\let\LWR@mynextaction\LWR@donothing}{}%

8638 \ifdefequal{\LWR@mynexttoken}{\rowcolor}%
8639   {\global\let\LWR@mynextaction\LWR@donothing}{}%

8640 \ifdefequal{\LWR@mynexttoken}{\arrayrulecolor}%
8641   {\global\let\LWR@mynextaction\LWR@donothing}{}%

8642 \ifdefequal{\LWR@mynexttoken}{\doublerulesepcolor}%
8643   {\global\let\LWR@mynextaction\LWR@donothing}{}%

8644 \ifdefequal{\LWR@mynexttoken}{\warpprintonly}%
8645   {\global\let\LWR@mynextaction\LWR@donothing}{}%

8646 \ifdefequal{\LWR@mynexttoken}{\warpHTMLonly}%
8647   {\global\let\LWR@mynextaction\LWR@donothing}{}%

8648 \ifdefequal{\LWR@mynexttoken}{\ldelim}%
8649   {\global\let\LWR@mynextaction\LWR@donothing}{}%

8650 \ifdefequal{\LWR@mynexttoken}{\rdelim}%
8651   {\global\let\LWR@mynextaction\LWR@donothing}{}%

```

For arydshln:

```

8652 \ifdefequal{\LWR@mynexttoken}{\hdashline}%
8653   {\global\let\LWR@mynextaction\LWR@donothing}{}%

8654 \ifdefequal{\LWR@mynexttoken}{\cdashline}%
8655   {\global\let\LWR@mynextaction\LWR@donothing}{}%

8656 \ifdefequal{\LWR@mynexttoken}{\firsthdashline}%
8657   {\global\let\LWR@mynextaction\LWR@donothing}{}%

8658 \ifdefequal{\LWR@mynexttoken}{\lasthdashline}%
8659   {\global\let\LWR@mynextaction\LWR@donothing}{}%

```

Ignore an empty line between rows:

```
8660 \ifdefequal{\LWR@mynexttoken}{\par}%
8661     {\global\let\LWR@mynextaction\LWR@donothing}{}%
```

No action for an \end token.

Add similar to the above for any other non-data tokens which might appear in the table.

Start the new table cell if was not any of the above:

```
8662 \LWR@traceinfo{\LWR@tabledatacolumntag: about to do mynext}%
8663 \LWR@mynextaction%
8664 \LWR@traceinfo{\LWR@tabledatacolumntag: done}%
8665 }

8666 \end{warpHTML}
```

72.29 \mrowcell

for HTML & PRINT: 8667 \begin{warpall}

 **multirow cells** The user must insert \mrowcell into any \multirow cells which must be skipped. This command has no action during print output.

```
8668 \newcommand*\mrowcell{}}

8669 \end{warpall}
```

72.30 \mcolrowcell

for HTML & PRINT: 8670 \begin{warpall}

 **multirow cells** The user must insert \mcolrowcell into any \multicolumnrow cells which must be skipped. This command has no action during print output.

```
8671 \newcommand*\mcolrowcell{}}

8672 \end{warpall}
```

72.31 HTML tabular environment

for HTML output: 8673 \begin{warpHTML}

These are default definitions in case `booktabs` is not loaded, and are not expected to be used, but must exist as placeholders. They are pre-deleted in case `memoir` has already loaded `booktabs`.

```

8674 \LetLtxMacro\toprule\relax
8675 \LetLtxMacro\midrule\relax
8676 \LetLtxMacro\cmidrule\cline
8677 \LetLtxMacro\bottomrule\relax
8678 \LetLtxMacro\addlinespace\relax
8679 \LetLtxMacro\morecmidrules\relax

8740 \LWR@traceinfo{\LWR@HTML@@tabular started}%
```

⚠ <table> inside

In **LATEX**, a **tabular** may be placed inside a **minipage**, but in **HTML** a <table> may not be inside a . Since there may be several nested s, with an unknown number of other objects between, it is hard to undo all these s before the <table> then redo them after. The browser probably compensates for this situation, but formatting may be lost inside the <table> because several things are neutralized inside a . Furthermore, in the **HTML** output, the entire <table> is placed on a single line of **HTML** code, since the line breaking commands are neutralized inside a . Since this is such a sloppy situation, a warning is issued here instructing the user to please isolate the to print-only.

```

8741 \ifnumcomp{\value{LWR@spandepth}}{>}{0}{%
8742     \PackageWarning{lwarp}{%
8743         A tabular is being used inside a span such as\MessageBreak
8744         a minipage. Some formatting may not be correct\MessageBreak
8745         in the tabular.\MessageBreak
8746         It is recommended to use \protect\warpprintonly\space or the\MessageBreak
8747         warpprint environment to isolate the span to\MessageBreak
8748         print-only,%
8749     }
8750 }{}}%
8751 \addtocounter{LWR@tabulardepth}{1}%

```

Not yet started a table row:

```
8752 \global\boolfalse{LWR@startedrow}%

8755 \global\boolfalse{LWR@doingtbrule}%
8756 \global\boolfalse{LWR@doingcmidrule}%

```

For **babel-french**, turn off auto spacing one time, then nullify the autospacing commands since were not compatible with the tabular parsing code.

```
8757 \LWR@nullifyNoAutoSpacing%
```

Have not yet found the end of tabular command. Unmute the @ and ! columns.

```

8758 \global\boolfalse{LWR@exittingtabular}%
8759 \global\boolfalse{LWR@tabularmutemods}%

```

Error if failed to use \mrowcell or \mcrowcell when needed.

```

8760 \boolfalse{LWR@usedmultirow}%
8761 \boolfalse{LWR@foundmrowcell}%

```

Create the table tag:

```

8762 \global\booltrue{LWR@intabularmetadata}%
8763 \LWR@traceinfo{LWR@@tabular: About to LWR@forecenewpage.}%
8764 \LWR@forcenewpage
8765 \LWR@htmlblocktag{table}%

```

Parse the table columns:

```
8766 \LWR@parsetablecols{#3}%
```

Table col spec is: \LWR@tablecols which is a string of llccrr, etc.

Do not place the table inside a paragraph:

```
8767 \LWR@stopars%
```

Track column #:

```
8768 \setcounter{LWR@tableLaTeXcolindex}{1}%
```

Have not yet added data in this column:

```
8769 \global\boolfalse{LWR@tabularcelladded}%
```

Start looking for midrules:

```
8770 \LWR@clearmidrules%
```

\\" becomes a macro to end the table row:

```
8771 \LetLtxMacro{\\"}{\LWR@tabularendofline}%
```

\warpprintonly inside a tabular must grab the next token.

```
8772 \LetLtxMacro{\warpprintonly}{\LWR@tabular@warpprintonly}%
```

The following adjust for colortbl.

```
8773 \LetLtxMacro{\arrayrulecolor}{\arrayrulecolornexttoken}%
8774 \LetLtxMacro{\doublerulesepcolor}{\doublerulesepcolornexttoken}%
8775 \gdef{\LWR@columnHTMLcolor}{}%
8776 \gdef{\LWR@rowHTMLcolor}{}%
8777 \gdef{\LWR@cellHTMLcolor}{}%
8778 \@rowcolors%
```

The vertical rules are set to the color active at the start of the tabular. \arrayrulecolor will then affect horizontal rules inside the tabular, but not the vertical rules.

```
8779 \ifdefvoid{\LWR@ruleHTMLcolor}%
8780   {\edef{\LWR@vertruleHTMLcolor}{black}}%
8781   {\edef{\LWR@vertruleHTMLcolor}{\LWR@origpound\LWR@ruleHTMLcolor}}%
```

Tracking the depth of cell color <div>s:

```
8782 \setcounter{LWR@cellcolordepth}{0}%
```

The following may appear before a data cell is created, so after doing their actions, we look ahead with \LWR@getmynexttoken to see if the next token might create a new data cell:

The optional parameter for \hline supports the tabls package.

```
8783 \LWR@traceinfo{\LWR@HTML@tabular: redefining macros}%
8784 \LetLtxMacro{\noalign}{\LWR@tabularnoalign}%
8785 \LetLtxMacro{\hline}{\LWR@HTMLhline}%
8786 \LetLtxMacro{\cline}{\LWR@HTMLcline}%
```

```
8787 \DeclareDocumentCommand{\hdashline}{o}{%
8788   \ifbool{FormatWP}{%
```

```

8885
8886 \StopDefiningTabulars
```

`siunitx` may redefine `tabular`, so set the following later:

```
8887 \AtBeginDocument{
8888   \LetLtxMacro{\LWR@origendtabular}{\endtabular}
8889   \csletcs{\LWR@origendtabular*}{\endtabular*}
8890   \LWR@formatted{@tabular}
8891   \LWR@formatted{endtabular}
8892   \LWR@formatted{endtabular*}
8893 }

8894 \end{warpHTML}
```

73 Cross-references

Sectioning commands have been emulated from scratch, so the cross-referencing commands are custom-written for them. Emulating both avoids several layers of patches.

File `*_html.aux` A new entry in `*_html.aux` is used to remember section name, file, and lateximage depth and number for each label:

```
\newlabel{<labelname>}@lwarp}{{<section name>}{{<filename>}
 {<imagedepth>}{{<imagenum>}}}
```

Table 12 shows the data structures related to cross-referencing.

for HTML output: 8895 `\begin{warpHTML}`

73.1 Setup

`\@currentlabelname` To remember the most recently defined section name, description, or caption, for `\nameref`.

8896 `\providecommand*{\@currentlabelname}{}`

`\LWR@stripperiod` `{<text>} [<.]`

Removes a trailing period.

8897 `\def\LWR@stripperiod#1.\ltx@empty#2@nil{#1}%`

`\LWR@setlatestname` `{<object name>}`

Removes `\label`, strips any final period, and remembers the result.

8898 `\newcommand*{\LWR@setlatestname}[1]{%`

Remove `\label` and other commands from the name, the strip any final period. See `getttitlestring`.

```
8899 \GetTitleStringExpand{#1}%
8900 \edef@\currentlabelname{\detokenize\expandafter{\GetTitleStringResult}}%
8901 \edef@\currentlabelname{%
8902   \expandafter\LWR@stripperiod@\currentlabelname%
8903   \ltx@empty.\ltx@empty@nil%
8904 }%
8905 }
```

73.2 New lwarp labels.

File `*_html.aux` A new entry in `*_html.aux` is used to remember section name, file, and lateximage depth and number for each label:

```
\newlabel{<labelname>}@lwarp}{{<section name>}{{<filename>}
 {<imagedepth>}{{<imagenum>}}}
```

Table 12: Cross-referencing data structures

Original L ^A T _E X:	(print and HTML)
\refstepcounter: Steps the counter and sets \currentlabel.	
\@currentlabel: \p@<ctr>\the<ctr> Updated by \refstepcounter.	
\label: Writes to the .aux file: \newlabel{<label>}{{\@currentlabel}{\thepage}}	
\newlabel: When the .aux file is read, sets \r@<label>.	
\r@<label>: Set to: {{\@currentlabel}{\thepage}}	
\ref: Returns the first part of \r@<label>.	
\pageref: Returns the second part of \r@<label>.	
Added by l warp:	(HTML only)
\label: Adds HTML tags (section 73.3), and another .aux entry (section 73.2).	
\newlabel: Unchanged. When the .aux file is read, sets \r@<label>@l warp.	
\r@<label>@l warp: Set to {{section_name}{file_name}{depth}{number}}: \LWR@nameref: The section name for this label. \LWR@htmlfileref: The filenumber or name for this label. \LWR@lateximagedepthref: The lateximagedepth for this label. \LWR@lateximagenumberref: The lateximagenumber for this label.	
\nameref: Emulated from hyperref for l warp. See section 73.4.	
\ref and \nameref: Adds HTML tags. See section 73.4.	
Added by amsmath:	(print and HTML)
\label: Execution is delayed until the math environment is completed.	
\ltx@label: L ^A T _E X \label, (HTML: patched by l warp,) later patched by cleveref.	
Added by cleveref:	(print and HTML)
\refstepcounter: Added: sets \cref@currentlabel.	
\cref@currentlabel: (<type>=<ctr> unless an alias is used): [<type>][\arabic{<ctr>}][<parent ctrs>]{\p@<ctr>\the<ctr>} Also see section 59.4 for use with footnotes.	
\label: Writes to the .aux file: \newlabel{<label>@\cref}{{\cref@currentlabel}{\thepage}}	
\newlabel: Unchanged. When the .aux file is read, sets \r@<label>@\cref.	
\r@<label>@\cref: Set to: {{\cref@currentlabel}{\thepage}}	
Utility functions: See \cref@getlabel, \cref@gettype, \cref@getcounter, \cref@getprefix.	
Cross-referencing names: \crefname and \Crefname assign human-readable names for references to this counter type.	
Additionally patched by l warp:	(HTML only)
\cref, etc.: Modified for l warp. See section 87.	
\label inside math: See section 79.7.1.	
Footnotes: See \noteentry in section 59.4.	

See:

<http://tex.stackexchange.com/questions/57194/extract-section-number-from-equation-reference>

\LWR@setref {*args list*} {*selector*} {*label*}

\@setref without the \null (\hbox), and without the warning messages. Each caused problems with l warp references. The regular reference will cause the warning.

```
8906 \def\LWR@setref#1#2#3{%
8907   \ifx#1\relax%
8908     ??%
8909   \else%
8910     \expandafter#2#1%
8911   \fi}
```

\LWR@nameref {*label*} Returns the section name for this label:

```
8912 \newcommand*{\LWR@nameref}[1]{%
8913   \expandafter\LWR@setref\csname r@#1@l warp\endcsname\LWR@firstoffour{#1}%
8914 }
```

\LWR@htmlfileref {*label*} Returns the file number or name for this label:

```
8915 \newcommand*{\LWR@htmlfileref}[1]{%
8916   \expandafter\LWR@setref\csname r@#1@l warp\endcsname\LWR@secondoffour{#1}%
8917 }
```

\LWR@lateximagedepthref {*label*} Returns the lateximagedepth for this label:

```
8918 \newcommand*{\LWR@lateximagedepthref}[1]{%
8919   \expandafter\LWR@setref\csname r@#1@l warp\endcsname\LWR@thirdoffour{#1}%
8920 }
```

\LWR@lateximagenumberref {*label*} Returns the lateximagenumber for this label:

```
8921 \newcommand*{\LWR@lateximagenumberref}[1]{%
8922   \expandafter\LWR@setref\csname r@#1@l warp\endcsname\LWR@fourthoffour{#1}%
8923 }
```

\LWR@lwarplabel {*label*} Sanitize the name and then creates the label:

```
8924 \newcommand*{\LWR@lwarplabel}[1]{%
8925   \LWR@traceinfo{\LWR@lwarplabel !#1!}%
8926   \LWR@setlatestname{\@currentlabelname}%
8927   \@bsphack%
8928   \protected@write\@auxout{}{%
8929     {\@string\newlabel{#1@l warp}{%
8930       {\@currentlabelname}%
8931       {\@ifbooleFileSectionNames{\LWR@thisfilename}{\arabic{\LWR@htmlfilenumber}}}}}}
```

```

8932           {\arabic{LWR@lateximagedepth}}%
8933           {\arabic{LWR@lateximagenumber}}%
8934       } } %
8935   \esphack%
8936 }
```

73.3 Labels

\LWR@sublabel {*label*} Creates an HTML id tag.

\detokenize is used to allow underscores in the labels.

```

8937 \newcommand*{\LWR@sublabel}[1]{%
8938 \LWR@traceinfo{\LWR@sublabel !#1!}}%
```

Create an HTML id tag unless are inside a lateximage, since it would appear in the image:

```

8939 \ifnumcomp{\value{LWR@lateximagedepth}}{>}{0}%
8940 {}%
8941 {% not lateximage
```

If not doing a lateximage, create an HTML ID tag: (To be factored...)

```

8942   \LWR@sanitize{#1}%
8943   \ifbool{\LWR@doingstartpars}{%
8944     {% pars allowed
8945       \ifbool{\LWR@doingapar}{%
8946         {% par started
8947           \LWR@htmltag{a \LWR@print@mbox{id="\LWR@sanitized"}\LWR@htmltag{/a}}%
8948         }% par started
8949         {% par not started
8950           \LWR@stoppars%
8951           \LWR@htmltag{a \LWR@print@mbox{id="\LWR@sanitized"}\LWR@htmltag{/a}}%
8952             \LWR@startpars%
8953           }% par not started
8954         }% pars allowed
8955         {% pars not allowed
8956           \LWR@htmltag{a \LWR@print@mbox{id="\LWR@sanitized"}\LWR@htmltag{/a}}%
8957         }% pars not allowed
8958     }% not lateximage
8959 }
```

\LWR@new@label (<*bookmark*>) {*label*} [*type*]

\label during HTML output when not in SVG math mode, removing extra spaces around the label, as done by a regular L^AT_EX \label.

The is also used during a lateximage, including SVG math, since the special label handling is required, but \LWR@sublabel does not generate HTML tags inside a lateximage.

cleverref later encases this to add its own cross-referencing.

The optional *<bookmark>* is per the memoir class, and is ignored.

The optional *<type>* is per the ntheorem package, and is ignored.

```
8960 \NewDocumentCommand{\LWR@new@label}{d() m o}{%
8961 \LWR@traceinfo{\LWR@new@label: starting}%
8962 \LWR@traceinfo{\LWR@new@label: !#2!}%
8963 % \@bsphack%
```

Create a traditional L^AT_EX label, as modified by cleveref:

```
8964 \LWR@orig@label{#2}%
```

Create a special label which holds the section number, L_WR@htmlfilename, L_WR@lateximagedepth, and L_WR@lateximagenumber:

```
8965 \LWR@traceinfo{\LWR@new@label: filesectionnames is \ifbool{FileSectionNames}{true}{false}}%
8966 \LWR@traceinfo{\LWR@new@label: LWR@thisfilename is !\LWR@thisfilename!}%
8967 \LWR@traceinfo{\LWR@new@label: LWR@htmlfilename is \arabic{LWR@htmlfilename}}%
8968 \LWR@lwarplabel{#2}%
8969 \LWR@sublabel{#2}%
8970 % \@esphack%
8971 \LWR@traceinfo{\LWR@new@label: done}%
8972 }
```

73.4 References

```
\LWR@addlinktitle
```

```
8973 \newcommand*{\LWR@addlinktitle}{%
8974     \ifdefvoid{\LWR@ThisAltText}{}{ % space
8975         title="\LWR@ThisAltText" % space
8976         \gdef\LWR@ThisAltText{}%
8977     }%
8978 }
```

\LWR@startref {*label*} (Common code for \ref and \nameref.)

Open an HTML tag reference to a filename, # character, and a label.

```
8979 \newcommand*{\LWR@startref}[1]%
8980 {%
8981 \LWR@sanitize{#1}%
8982 \LWR@traceinfo{\LWR@startref A: !#1!}%
}
```

Create the filename part of the link:

```
8983 \LWR@htmltag{a href="#"%
8984 \LWR@traceinfo{\LWR@startref B}%
8985 \LWR@print@mbox{\LWR@htmlrefsectionfilename{#1}}%
8986 \LWR@traceinfo{\LWR@startref C}%
8987 \LWR@origpound%
```

Create the destination id:

See if `LWR@lateximagedepth` is unknown:

```
8988 \LWR@traceinfo{LWR@startref D: !#1!}%
8989 \ifcsundef{r@#1@lwarp}{%
```

“`??`” if `LWR@lateximagedepth` is unknown, so create a link with an unknown destination:

```
8990 {%
8991     \LWR@traceinfo{LWR@startref D0: ??}%
8992     ??%
8993 }%
```

If `LWR@lateximagedepth` is known. Use a `lateximage` if the depth is greater than zero, or a regular link otherwise:

```
8994 {%
8995     \ifthenelse{\cnttest{\LWR@lateximagedepthref{#1}}{>}{0}}{%
8996         {%
8997             \LWR@ImagesName\lWR@lateximagenumberref{#1}%
8998         }%
8999         {%
9000             \LWR@traceinfo{LWR@startref D3}%
}
```

`\detokenize` is used to allow underscores in the labels:

```
9001             \LWR@print@mbox{\LWR@sanitized}%
9002         }%
9003 }%
9004 \LWR@traceinfo{LWR@startref E}%
```

Closing quote:

```
9005 "%
```

Maybe add a title:

```
9006 \LWR@addlinktitle%
9007 }%
9008 \LWR@traceinfo{LWR@startref F}%
9009 }
```

`\LWR@subnewref {<label>} {<label or sub@label>}`

Factored for the `subfig` package. Uses the original label for the hyper-reference, but prints its own text, such as “1(b)”.

```
9010 \NewDocumentCommand{\LWR@subnewref}{m m}{%
9011 \LWR@traceinfo{LWR@subnewref #1 #2}%
9012 \LWR@startref{#1}%
9013 \LWR@print@ref{#2}%
}
```

```
9014 \LWR@htmltag{/a}%
9015 }
```

\ref * {\langle label \rangle} \ref is redefined to \LWR@HTML@ref, except inside the text part of a \hyperref, where it is redefined to \LWR@ref@ignorestar.

\LWR@HTML@ref * {\langle label \rangle} Create an internal document reference link, or without a link if starred per \hyperref.

```
9016 \NewDocumentCommand{\LWR@HTML@ref}{s m}{%
9017 \LWR@traceinfo{\LWR@HTML@ref !#2!}%
9018 \IfBooleanTF{#1}%
9019 {\LWR@print@ref{#2}}%
9020 {\LWR@subnewref{#2}{#2}}%
9021 }
9022
9023 \LWR@formatted{ref}
```

\LWR@ref@ignorestar * {\langle label \rangle} For use inside \hyperref. Ignores the star, then uses the original \ref.

```
9024 \NewDocumentCommand{\LWR@ref@ignorestar}{s m}{%
9025     \LWR@print@ref{#2}%
9026 }
```

\pagerefPageFor Text for page references.

```
9027 \newcommand*{\pagerefPageFor}[see ]
```

\pageref * {\langle label \rangle} Create an internal document reference, or just the unlinked number if starred, per \hyperref.

```
9028 \NewDocumentCommand{\LWR@new@pageref}{s m}{%
9029 \IfBooleanTF{#1}%
9030 {(\pagerefPageFor\LWR@print@ref{#2})}%
9031 {(\cpageref{#2})}%
9032 }
```

\nameref {\langle label \rangle}

```
9033 \newrobustcmd*{\nameref}[1]{%
9034 \LWR@traceinfo{\nameref}%
9035 \LWR@startref{#1}%
9036 \LWR@traceinfo{\nameref B}%
9037 \LWR@nameref{#1}%
9038 \LWR@traceinfo{\nameref C}%
9039 \LWR@htmltag{/a}%
9040 \LWR@traceinfo{\nameref: done}%
9041 }
```

\Nameref {*label*} In print, adds the page number. In HTML, does not.

```
9042 \LetLtxMacro\Nameref\nameref
```

73.5 Hyper-references

-  Note that the code currently only sanitizes the underscore character. Additional characters should be rendered inert as well. See the `hyperref.sty` definition of `\gdef\hyper@normalise` for an example.

Pkg `hyperref`

-  Do not tell other packages that `hyperref` is emulated. Some packages patch various commands if `hyperref` is present, which will probably break something, and the emulation already handles whatever may be emulated anyhow.

```
9043 % DO NOT TELL OTHER PACKAGES TO ASSUME HYPERREF, lest they attempt to patch it:  
9044 % \EmulatesPackage{hyperref}[2015/08/01]% Disabled. Do not do this.
```

Emulates `hyperref`:

\@currentHref Added to support backref.

```
9045 \AtBeginDocument{  
9046 \def\@currentHref{  
9047 autopage-\theLWR@currentautosec%  
9048 }  
9049 }
```

\LWR@linkcatcodes Sets catcodes before processing macros which have hyperlinks as arguments.

```
9050 \newcommand*{\LWR@linkcatcodes}{%  
9051     \catcode`\#=12%  
9052     \catcode`\%=12%  
9053     \catcode`\&=12%  
9054     \catcode`\~=12%  
9055     \catcode`\_=12%
```

For `babel-french`:

```
9056     \LWR@FBcancel%  
9057 }
```

\LWR@linkmediacatcodes Sets catcodes before processing macros which have hyperlinks as arguments. Modified for multimedia links.

```
9058 \newcommand*{\LWR@linkmediacatcodes}{%  
9059     \catcode`\#=12%  
9060     \catcode`\%=12%  
9061 %     \catcode`\&=12% left alone for splitting flash variables  
9062     \catcode`\~=12%  
9063     \catcode`\_=12%
```

For **babel-french**:

```
9064     \LWR@FBcancel%
9065 }
```

`\LWR@subhyperref {⟨URL⟩}`

Starts a link for `\LWR@hrefb`. A group must have been opened first, with nullified catcodes. The text name is printed afterwards, after the group is closed and catcodes restored.

```
9066 \NewDocumentCommand{\LWR@subhyperref}{m}{%
9067   \LWR@traceinfo{\LWR@subhyperref !#1!}%
9068   \LWR@sanitize{#1}%
9069   \LWR@htmltag{%
9070     a href="\LWR@sanitized" % space
9071     \LWR@addlinktitle % space
9072     target="\_\_blank" % space
9073   }%
9074 }
```

`\LWR@subhyperreftext {⟨text⟩}`

Finishes the hyperref for `\LWR@hrefb`. Catcodes must have been restored already. To be used after `\LWR@subhyperref`, and after its group has been closed.

```
9075 \newcommand{\LWR@subhyperreftext}[1]{%
9076   #1%
9077   \LWR@htmltag{/a}%
9078   \LWR@ensuredoingapar%
9079 }
```

`\LWR@subhyperrefclass {⟨URL⟩} {⟨text⟩} {⟨htmlclass⟩}`

```
9080 \NewDocumentCommand{\LWR@subhyperrefclass}{m +m m}{%
9081   \LWR@htmltag{%
9082     a % space
9083     href="\begingroup\@sanitize#1\endgroup" % space
9084     class="#3" % space
9085     \LWR@addlinktitle % space
9086   }\LWR@orignewline%
9087   #2%
9088   \LWR@htmltag{/a}%
9089   \LWR@ensuredoingapar%
9090 }
```

`\href [⟨options⟩] {⟨URL⟩}`

Create a link with accompanying text:

```
9091 \DeclareDocumentCommand{\LWR@hrefb}{O{} m}{%
9092   \LWR@ensuredoingapar%
```

```

9093   \LWR@subhyperref{#2}%
9094   \endgroup% restore catcodes
9095   \LWR@subhyperreftext%
9096 }
9097
9098 \newrobustcmd*\{\href}{%
9099   \begingroup%
9100   \LWR@linkcatcodes%
9101   \LWR@hrefb%
9102 }

\nolinkurl {<URL>}

```

Print the name of the link without creating the link:

```

9103 \newcommand*\{\LWR@nolinkurlb}[1]{%
9104   \LWR@ensuredoingapar%
9105   \def\LWR@templink{#1}%
9106   \onelevel@sanitize\LWR@templink%
9107   \LWR@templink%
9108   \endgroup%
9109 }
9110
9111 \newrobustcmd*\{\nolinkurl}{%
9112   \begingroup%
9113   \LWR@linkcatcodes%
9114   \LWR@nolinkurlb%
9115 }

\nolinkurl {<URL>}

```

Create a link whose text name is the address of the link.

The `url` package may redefine `\url`, so it is `\let` to `\LWR@urlahere` and also redefined by `lwarp-url`.

```

9116 \DeclareDocumentCommand{\LWR@urlb}{m}{%
9117   \LWR@ensuredoingapar%
9118   \def\LWR@templink{#1}%
9119   \onelevel@sanitize\LWR@templink%
9120   \href{\LWR@templink}{\LWR@templink}%
9121   \endgroup%
9122 }
9123
9124 \newrobustcmd*\{\url}{%
9125   \begingroup%
9126   \LWR@linkcatcodes%
9127   \LWR@urlb%
9128 }

\nolinkurl {<alt> tag} {<class>} {<filename>} {<extension>} {<CSS style>}

```

Factored from `lateximage`.

```
9129 \newcommand*{\LWR@subinlineimage}[5]{%
9130     \ifblank{#1}{%
9131         {%
9132             \LWR@htmltag{img \LWR@indentHTML
9133                 src="#3.#4" \LWR@indentHTML
9134                 alt="#3" \LWR@indentHTML
9135                 style="#5" \LWR@indentHTML
9136                 class="#2" \LWR@orignewline
9137             }%
9138         }%
9139     {%
9140         \LWR@htmltag{img \LWR@indentHTML
9141                 src="#3.#4" \LWR@indentHTML
9142                 alt="#1" \LWR@indentHTML
9143                 style="#5" \LWR@indentHTML
9144                 class="#2" \LWR@orignewline
9145             }%
9146         }%
9147 }%
9148 \end{warpHTML}
```

Table 13: Float data structures

For each <type> of float (figure, table, etc.) there exists the following:

counter <type>: A counter called <type>, such as figure, table.

\<type>name: Name. \figurename prints “Figure”, etc.

\ext@<type>: File extension. \ext@figure prints “lof”, etc.

\fps@<type>: Placement.

\the<type>: Number. \thetable prints the number of the table, etc.

\p@<type>: Parent’s number. Prints the number of the [within] figure, etc.

\fnum@<type>: Prints the figure number for the caption.

\<type>name \the<type>, “Figure 123”.

\<type>: Starts the float environment. \figure or \begin{figure}

\end<type>: Ends the float environment. \endfigure or \end{figure}

\tf@<ext>: The L^AT_EX file identifier for the output file.

LWR@have<type>: A boolean remembering whether a \listof was requested for a float of this type.

File with extension lo<f,t,a-z>: An output file containing the commands to build the \listof<type> “table-of-contents” structure.

Cross-referencing names: For cleveref’s \cref and related, \crefname and \Crefname assign human-readable names for references to this float type.

74 Floats

Floats are supported, although partially through emulation.

Table 13 shows the data structure associated with each <type> of float.

\@makecaption is redefined to print the float number and caption text, separated by \CaptionSeparator, which works with the babel package to adjust the caption separator according to the language. French, for example, uses an en-dash instead of a colon: “Figure 123 – Caption text”.

74.1 Float environment

for HTML output: 9149 \begin{warpHTML}

\LWR@floatbegin {<type>} [<placement>] Begins a \newfloat environment.

```

9150 \NewDocumentCommand{\LWR@floatbegin}{m o}{%
9151 \ifbool{FormatWP}{\newline}{}}%
9152 \LWR@stoppars

```

There is a new float, so increment the unique float counter:

```

9153 \addtocounter{\LWR@thisautoid}{1}%
9154 \booltrue{\LWR@freezethisautoid}%
9155 \begingroup%

```

Settings while inside the environment:

```

9156 \LWR@print@raggedright%

```

Open an **HTML figure** tag. The figure is assigned a `class` equal to its type, and another class according to the `float` package style, if used. Note that `\csuse` returns an empty string if `\LWR@floatstyle<type>` is not defined.

```

9157 \LWR@htmlltag{%
9158   figure id="\LWR@print@mbox{autoid-\arabic{\LWR@thisautoid}}" % space
9159   class="#1 \nameuse{\LWR@floatstyle@#1}"%
9160 }%
9161 \ifbool{FormatWP}{%
9162   \LWR@newline%
9163   \LWR@BlockClassWP{}{}{wp#1}%
9164 }{%

```

Update the caption type:

```

9165 \renewcommand*\@capttype{#1}%
9166 \caption@settype{#1}%

```

Mark the float for a word processor conversion:

```

9167 \LWR@startpars%
9168 \ifboolexpr{bool{FormatWP} and bool{WPMarkFloats}}{%
9169
9170 === begin #1 ===
9171
9172 }{%

```

Look for `\centering`, etc:

```

9173 \LWR@futureonospacelet\LWR@mynexttoken\LWR@floatalignment%
9174 }

```

For koma-script. The following does not work for tables.

```

9175 \AtBeginDocument{%
9176 \@ifpackageloaded{tocbasic}{%
9177 \appto\figure@atbegin{%

```

```

9178 \LWR@futureonospacelet\LWR@mynexttoken\LWR@floatalignment%
9179 }
9180 }{ }
9181 }

```

\@float Support packages which create floats directly.
 \@dblfloat
 9182 \let\@float\LWR@floatbegin
 9183 \let\@dblfloat\LWR@floatbegin

\LWR@floatend Ends a \newfloat environment.

```
9184 \newcommand*\{\LWR@floatend}{%
```

If saw a \centering, finish the center environment:

```
9185 \LWR@endfloatalignment%
```

Mark the float end for a word processor conversion:

```

9186 \ifboolexpr{bool{FormatWP} and bool{WPMarkFloats}}{%
9187 === end ===
9189
9190 }{}%
9191 \LWR@stoppars%

```

Close an HTML figure tag:

```

9192 \ifbool{FormatWP}{\endLWR@BlockClassWP}{}
9193 \LWR@htmlelementend{figure}%
9194 \endgroup%
9195 \boolfalse{\LWR@freezethisautoid}%
9196 \LWR@startpars%
9197 \ifbool{FormatWP}{\newline}{}
9198 }

```

\end@float Support packages which create floats directly.
 \end@dblfloat
 9199 \let\end@float\LWR@floatend
 9200 \let\end@dblfloat\LWR@floatend

74.2 Float tracking

Ctr \LWR@thisautoid A sequential counter for all floats and theorems. This is used to identify the float or theorem then reference it from the List of Figures and List of Tables.

```
9201 \newcounter{\LWR@thisautoid}
```

Ctr `\LWR@thisautoidWP` A sequential counter for all word processor conversion <div>s. This is used to convince LIBREOFFICE to form a frame around this element.

```
9202 \newcounter{\LWR@thisautoidWP}
```

Bool `\LWR@freezethisautoid` Prevents multiple increments of `\LWR@thisautoid` inside a float.

```
9203 \newbool{\LWR@freezethisautoid}
9204 \boolefalse{\LWR@freezethisautoid}
```

`\LWR@newautoidanchor` Adds a new <autoid> anchor.

```
9205 \newcommand*\LWR@newautoidanchor{%
9206 \ifnumcomp{\value{\LWR@lateximagedepth}}{>}{0}%
9207 {}%
9208 {}%
9209 \ifbool{\LWR@freezethisautoid}{}{%
9210 \addtocounter{\LWR@thisautoid}{1}%
9211 \LWR@htmlltag{a id="\LWR@print@mbox{autoid-\arabic{\LWR@thisautoid}}"}%
9212 \LWR@htmlltag{/a}%
9213 }%
9214 }%
9215 }
```

`\@capttype` Remembers which float type is in use.

```
9216 \newcommand*\@capttype{}
```

`\LWR@floatalignmentname` Set to center, flushleft, or flushright if saw \centering, \raggedright, or \raggedleft.

```
9217 \newcommand*\LWR@floatalignmentname{}
```

`\LWR@floatalignment` If sees a \centering, \raggedleft, or \raggedright, creates a center, flushright, or flushleft environment.

```
9218 \newcommand*\LWR@floatalignment{%
9219 \ifdefstequal{\LWR@mynexttoken}{\centering}{%
9220 \center%
9221 \renewcommand*\LWR@floatalignmentname{center}%
9222 }{%
9223 \ifdefstequal{\LWR@mynexttoken}{\raggedright}{%
9224 \flushleft%
9225 \renewcommand*\LWR@floatalignmentname{flushleft}%
9226 }{%
9227 \ifdefstequal{\LWR@mynexttoken}{\raggedleft}{%
9228 \flushright%
9229 \renewcommand*\LWR@floatalignmentname{flushright}%
9230 }{%
9231 }}
```

`\LWR@endfloatalignment` Closes an environment from `\LWR@floatalignment`.

```

9232 \newcommand*{\LWR@endfloatalignment}{%
9233 \ifdefvoid{\LWR@floatalignmentname}{}{%
9234 \renewcommand*{\LWR@floatalignmentname}{}%
9235 }

```

74.3 Caption inside a float environment

\CaptionSeparator How to separate the float number and the caption text.

```
9236 \AtBeginDocument{\providecommand*{\CaptionSeparator}{:~}}
```

\@makecaption {\langle name and num\rangle } {\langle text\rangle }

Prints the float type and number, the caption separator, and the caption text.

```

9237 \AtBeginDocument{\renewcommand{\@makecaption}[2]{%
9238   \LWR@traceinfo{@makecaption}%
9239   \LWR@isolate{#1}\CaptionSeparator\LWR@isolate{#2}%
9240   \LWR@traceinfo{@makecaption: done}%
9241 }%
9242 }

```

74.4 Caption and LOF linking and tracking

When a new HTML file is marked in the L^AT_EX PDF file, the L^AT_EX page number at that point is stored in LWR@latestautopage, (and the associated filename is remembered by the special L^AT_EX labels). This page number is used to generate an autopage HTML <id> in the HTML output at the start of the new HTML file. Meanwhile, there is a float counter used to generate an HTML autoid <id> at the start of the float itself in the HTML file. The autopage and autoid values to use for each float are written to the .lof, etc. files just before each float's entry. These values are used by \l@figure, etc. to create the HTML links in the List of Figures, etc.

Ctr LWR@nextautoid Tracks autoid for floats. Tracks autopage for floats.

Ctr LWR@nextautopage These are updated per float as the .lof, .lot file is read.

```

9243 \newcounter{LWR@nextautoid}
9244 \newcounter{LWR@nextautopage}

```

\LWRsetnextfloat {\langle autopage\rangle } {\langle float autoid\rangle }

File *_html.lof This is written to the *_html.lof or *_html.lot file just before each float's usual entry. The autopage and the float's autoid are remembered for \l@figure to use when creating the HTML links.

```

9245 \newcommand*{\LWRsetnextfloat}[2]{%
9246   \setcounter{LWR@nextautopage}{#1}%
9247   \setcounter{LWR@nextautoid}{#2}%
9248 }

```

Ctr LWR@latestautopage Updated each time a new HTML file is begun. \LWRsetnextfloat is written with this and the autoid by the modified \addcontentsline just before each float's entry.

```
9249 \newcounter{LWR@latestautopage}
9250 \setcounter{LWR@latestautopage}{1}
```

Env LWR@figcaption An HTML <figcaption> is not allowed in places where L^AT_EX does allow a figure caption, such as inside a longtable where the tabular has already started, or inside a center environment. Therefore, a <div> of class figurecaption is used instead.

```
9251 \newenvironment*{LWR@figcaption}
9252   {
9253     \ifbool{FormatWP}{%
9254       \BlockClass[font-style:italic]{figurecaption}
9255 %       \LWR@print@vspace*\{\baselineskip\}
9256     }{
9257       \BlockClass{figurecaption}
9258     }%
9259   }
9260   {\endBlockClass}
```

\LWR@HTML@caption@begin {{<type>}}

Low-level code to create HTML tags for captions.

The print versions are from the **caption** package.

```
9261 \newcommand*{\LWR@HTML@caption@begin}[1]
9262 {%
9263 \LWR@traceinfo{\LWR@HTML@caption@begin}%
}
```

Keep par and minipage changes local:

```
9264 \begingroup%
```

No need for a minipage or \parbox inside the caption:

```
9265 \RenewDocumentEnvironment{minipage}{O{t} o O{t} m}{\begin{#1}\begin{#2}}{\end{#2}\end{#1}}
9266 \RenewDocumentCommand{\parbox}{O{t} O{} O{t} m +m}{\begin{#1}\begin{#2}\begin{#3}\begin{#4}\end{#4}\end{#3}\end{#2}\end{#1}}{##5}%
```

Enclose the original caption code inside an HTML tag:

```
9267 \LWR@figcaption%
9268 \LWR@traceinfo{\LWR@HTML@caption@begin: about to \LWR@origcaption@begin}%
9269 \LWR@print@caption@begin{\#1}%
9270 \LWR@traceinfo{\LWR@HTML@caption@begin: done}%
9271 }
```

\LWR@HTML@caption@end Low-level patches to create HTML tags for captions.

```
9272 \newcommand*{\LWR@HTML@caption@end}%
9273 {%
```

```
9274 \LWR@traceinfo{\LWR@HTML@caption@end}%
9275 \LWR@print@caption@end%
```

Closing tag:

```
9276 \endLWR@figcaption%
9277 \endgroup%
9278 % \leavevmode% avoid bad space factor (0) error
9279 \LWR@traceinfo{\LWR@HTML@caption@end: done}%
9280 }
```

\caption@begin Low-level patches to create HTML tags for captions. These are assigned \AtBeginDocument so that other packages which modify captions will have already been loaded before saving the print-mode version.

```
9281 \AtBeginDocument{%
9282 \LWR@formatted{caption@begin}%
9283 \LWR@formatted{caption@end}%
9284 }
```

\captionlistentry Tracks the float number for this caption used outside a float. Patched to create an HTML anchor.

```
9285 \let\LWR@origcaptionlistentry\captionlistentry
9286
9287 \renewcommand*{\captionlistentry}{%
9288 \LWR@ensuredoingapar%
9289 \LWR@origcaptionlistentry%
9290 }
9291
9292 \def\LWR@LTcaptionlistentry{%
9293 \LWR@ensuredoingapar%
9294 \LWR@htmlltag{a id="\LWR@print@mbox{autoid-\arabic{\LWR@thisautoid}}"\LWR@htmlltag{/a}}%
9295 \bgroup
9296 \@ifstar{\egroup\LWR@LT@captionlistentry}{% gobble *
9297 {\egroup\LWR@LT@captionlistentry}}%
9298 \def\LWR@LT@captionlistentry#1{%
9299 \caption@listentry@\firstoftwo[\LTcaptype]{#1}}%
```

\addcontentsline Patched to write the autopage and autoid before each float's entry. No changes if writing .toc For a theorem, automatically defines \ext@<type> as needed, to mimic and reuse the float mechanism.

f

```
9300 \let\LWR@origaddcontentsline\addcontentsline
9301
9302 \renewcommand*{\addcontentsline}[3]{%
9303 \ifstreq{\#1}{toc}{\not{TOC}}{%
9304 \ifnumcomp{\value{\LWR@lateximagedepth}}{>}{0}{%
9305 {}}%
9306 {\LWR@newautoidanchor}}}
```

```

9307 \ifcsvoid{ext@#2}{\csdef{ext@#2}{#1}}{}%
9308 \addtocontents{@nameuse{ext@#2}}{%
9309   \protect\LWRsetnextfloat{%
9310     {\arabic{\LWR@latestautopage}}%
9311     {\arabic{\LWR@thisautoid}}%
9312   }%
9313 }% not TOC
9314 \LWR@origaddcontentsline{#1}{#2}{#3}%
9315 }

```

Pkg `capt-of` Either package provides `\captionof`, which is later patched at the beginning of the document.

`\captionof` Patched to handle paragraph tags.

```

9316 \AtBeginDocument{%
9317 \let\LWR@origcaptionof\captionof%
9318 %
9319 \renewcommand*{\captionof}{%
9320 \LWR@stoppars%
9321 \LWR@origcaptionof%
9322 }%
9323 }

```

```
9324 \end{warpHTML}
```

75 Table of Contents, LOF, LOT

This section controls the generation of the TOC, LOF, and LOT.

The `.toc`, `.lof`, and `.lot` files are named by the source code `\jobname`.

In `HTML`, the printed tables are placed inside a `<div>` of class `toc`, `lof`, or `lot`.

A “`sitetoc`” is provided which prints a subset of the TOC on the side of each page other than the homepage.

The regular L^AT_EX infrastructure is used for TOC, along with some patches to generate HTML output.

for HTML output: 9325 `\begin{warpHTML}`

75.1 Reading and printing the TOC

`\LWR@myshorttoc {<toc/lof/lot/sitetoc>}`

Reads in and prints the TOC/LOF/LOT at the current position. While doing so, makes the @ character into a normal letter to allow formatting commands in the section names.

Unlike in regular L^AT_EX, the file is not reset after being read, since the sidetoc may be referred to again in each HTML page.

```
9326 \newcommand*{\LWR@myshorttoc}[1]{%
9327 \LWR@traceinfo{\LWR@myshorttoc: #1}%
9328 \LWR@ensuredoingapar%
```

Only if the file exists:

```
9329 \IfFileExists{\jobname.\#1}{%
9330 \LWR@traceinfo{\LWR@myshorttoc: loading}%
```

 Many of the commands in the file will have @ characters in them, so @ must be made a regular letter.

```
9331 \begingroup%
9332 \makeatletter%
```

Read in the TOC file:

```
9333 \@input{\jobname.\#1}%
9334 \endgroup%
9335 }%
9336 { }%
9337 \LWR@traceinfo{\LWR@myshorttoc: done}%
9338 }
```

\LWR@subtableofcontents {<toc/lof/lot>} {<sectionstarname>}

Places a TOC/LOF/LOT at the current position.

```
9339 \NewDocumentCommand{\LWR@subtableofcontents}{m m}{%
```

Closes previous levels:

```
9340 \@ifundefined{chapter}%
9341 {\LWR@closeprevious{section}}%
9342 {\LWR@closeprevious{chapter}}}
```

Prints any pending footnotes so that they appear above the potentially large TOC:

```
9343 \LWR@printpendingfootnotes
```

Place the list into its own chapter (if defined) or section:

```
9344 \@ifundefined{chapter}{\section*{\#2}}{\chapter*{\#2}}
```

Create a new HTML nav containing the TOC/LOF/LOT:

```
9345 \LWR@htmlelementclass{nav}{\#1}
```

Create the actual list:

```
9346 \LWR@myshorttoc{#1}
```

Close the nav:

```
9347 \LWR@htmlelementclassend{nav}{#1}
9348 }
```

```
\@starttoc {⟨ext⟩}
```

Patch \@starttoc to encapsulate the TOC inside HTML tags:

```
9349 \let\LWR@orig@starttoc@\starttoc
9350
9351 \renewcommand{\@starttoc}[1]{
9352 \LWR@htmlelementclass{nav}{#1}
9353 \LWR@orig@starttoc{#1}
9354 \LWR@htmlelementclassend{nav}{#1}
9355 }
```

Bool LWR@copiedsidetoc Used to only copy the TOC file to the sidetoc a single time.

(listings and perhaps other packages would re-use \tableofcontents for their own purposes, causing the sidetoc to be copied more than once, and thus end up empty.)

```
9356 \newbool{LWR@copiedsidetoc}
9357 \boolfalse{LWR@copiedsidetoc}
```

\tableofcontents Patch \tableofcontents, etc. to print footnotes first. newfloat uses \listoffigures for all future float types.

```
9358 \AtBeginDocument{
9359 \let\LWR@origtableofcontents\tableofcontents
9360
9361 \renewcommand*\tableofcontents}{%
```

Do not print the table of contents if formatting for a word processor, which will presumably auto-generate its own updated table of contents:

```
9362 \ifboolexpr{bool{FormatWP} and bool{WPMarkTOC}}{
9363
9364 === table of contents ===
9365
9366 }
9367 {
```

Copy the .toc file to .sidetoc for printing the sidetoc. The original .toc file is renewed when \tableofcontents is finished.

```
9368 \ifbool{LWR@copiedsidetoc}{}{%
9369   \LWR@copyfile{\jobname.toc}{\jobname.sidetoc}%
9370   \booltrue{LWR@copiedsidetoc}%
9371 }%
```

```

9372     \LWR@printpendingfootnotes
9373     \LWR@origtableofcontents
9374 }
9375 }% \tableofcontents

9402 }

```

75.2 High-level TOC commands

```
\listof {<type>} {<title>}
```

Emulate the `\listof` command from the `float` package (section 232). Used to create lists of custom float types. Also used to redefine the standard L^AT_EX `\listoffigures` and `\listoftables` commands.

```

9403 \NewDocumentCommand{\listof}{m +m}{%
9404 @ifundefined{l@#1}{%
9405     \csdef{l@#1##1##2}{\hypertocfloat{1}{#1}{\nameuse{ext@#1}}{##1}{##2}}%
9406 }{}}%
9407 \LWR@subtableofcontents{\nameuse{ext@#1}}{#2}
9408 \expandafter\newwrite\csname tf@\csname ext@#1\endcsname\endcsname

```

```

9409 \immediate\openout \csname tf@\csname ext@#1\endcsname\endcsname
9410     \jobname.\@nameuse{ext@#1}\relax
9411 }

```

75.3 Side toc

The “side toc” is a table-of-contents positioned to the side.

It may be renamed by redefining `\sidetocname`, and may contain paragraphs.

`css` may be used to format the `sidetoc`:

CSS related to sidetoc:

div.sidetoccontainer: The entire sidetoc.
div.sidetotitle: The title.
div.sidetoccontents: The table of contents.

```

9412 \end{warpHTML}

```

for HTML & PRINT: 9413 \begin{warpall}

Ctr SideTOCDepth Controls how deep the side-TOC gets. Use a standard L^AT_EX section level similar to `tocdepth`. Warn if parts of the website may be inaccessible.

```

9414 \newcounter{SideTOCDepth}
9415 \setcounter{SideTOCDepth}{1}
9416
9417 \AtBeginDocument{%
9418     \ifnumcomp{\value{SideTOCDepth}}{<}{\value{FileDepth}}{%
9419         \PackageWarningNoLine{lwarp}%
9420         {%
9421             SideTOCDepth is less than FileDepth, \MessageBreak
9422             so some website pages may be inaccessible%%
9423         }%
9424     }{}%
9425 }

```

`\sidetocname` Holds the default name for the `sidetoc`.

```

9426 \newcommand{\sidetocname}{Contents}
9427 \end{warpall}

```

for HTML output: 9428 \begin{warpHTML}

`\LWR@sidetoc` Creates the actual side-TOC.

```

9429 \newcommand*{\LWR@sidetoc}{
9430 \LWR@forcenewpage
9431 \LWR@stoppars
9432

```

The entire sidetoc is placed into a nav of class sidetoc.

```

9433 \LWR@htmlelementclass{div}{sidetoccontainer}
9434 \LWR@htmlelementclass{nav}{sidetoc}
9435
9436 \setcounter{tocdepth}{\value{SideTOCDepth}}
9437

```

The title is placed into a <div> of class sidetoctitle, and may contain paragraphs.

```

9438 \begin{BlockClass}{sidetoctitle}
9439 \ifcsvvoid{thetitle}{}{\InlineClass{sidetocthetitle}{\thetitle}\par}
9440 \sidetocname
9441 \end{BlockClass}

```

The table of contents is placed into a <div> of class sidetoccontents.

```

9442 \begin{BlockClass}{sidetoccontents}
9443 \LinkHome
9444
9445 \LWR@myshorttoc{sidetoc}
9446 \end{BlockClass}
9447 \LWR@htmlelementclassend{nav}{sidetoc}
9448 \LWR@htmlelementclassend{div}{sidetoccontainer}
9449 }

```

75.4 Low-level toc line formatting

\numberline {⟨number⟩}

(Called from each line in the .aux, .lof files.)

Record this section number for further use:

```

9450 \newcommand*{\LWR@numberline}[1]{%
9451 \LWR@sectionnumber{#1}\quad%
9452 }
9453
9454 \LetLtxMacro{\numberline}{\LWR@numberline}

```

\LWR@maybetocdata Replaced by **tocdata**. Adds author name.

```

9455 \newcommand*{\LWR@maybetocdata}{}%

```

\hypertoc {⟨1: depth⟩} {⟨2: type⟩} {⟨3: name⟩} {⟨4: page⟩}

Called by \l@section, etc. to create a hyperlink to a section.

The autopage label is always created just after the section opens.

- #1 is depth
- #2 is section, subsection, etc.
- #3 the text of the caption
- #4 page number

```
9456 \NewDocumentCommand{\hypertoc}{m m +m m}{%
9457 \LWR@traceinfo{hypertoc !#1!#2!#3!#4!}}%
```

Respond to tocdepth:

```
9458 \ifthenelse{\cnttest{#1}{<=}{\value{tocdepth}}}{%
9459   {%
9460     \LWR@startpars%
```

Create an HTML link to <filename>#autosec-(page), with the name, of the given HTML class.

\BaseJobname is added to the label in case xr or xr-hyper are used.

```
9461       \LWR@subhyperrefclass{%
9462         \LWR@htmlrefsectionfilename{\BaseJobname-autosec-#4}}%
9463         \LWR@origpound\LWR@print@mbox{autosec-#4}%
9464       }{#3}{toc#2}%

9465       \LWR@maybetocdata%

9466       \LWR@stoppars%
9467     }%
9468   {}%
9469 \LWR@traceinfo{hypertoc done}%
9470 }
```

ctr lofdepth TOC depth for figures.

```
9471 \@ifclassloaded{memoir}{}{%
9472 \newcounter{lofdepth}%
9473 \setcounter{lofdepth}{1}%
9474 }
```

ctr lotdepth TOC depth for tables.

```
9475 \@ifclassloaded{memoir}{}{%
9476 \newcounter{lotdepth}%
9477 \setcounter{lotdepth}{1}%
9478 }
```

\hypertocfloat {\langle 1: depth\rangle} {\langle 2: type\rangle} {\langle 3: ext of parent\rangle} {\langle 4: caption\rangle} {\langle 5: page\rangle}

- #1 is depth
- #2 is figure, table, etc.
- #3 is lof, lot, of the parent.
- #4 the text of the caption
- #5 page number

```
9479 \newcommand{\hypertocfloat}[5]{%
9480 \LWR@startpars
```

If some float-creation package has not yet defined the float type's `lofdepth` counter, etc, define it here:

```
9481 \@ifundefined{c@#3depth}{%
9482 \newcounter{#3depth}%
9483 \setcounter{#3depth}{1}%
9484 }{}%
```

Respond to `lofdepth`, etc.:

```
9485 \LWR@traceinfo{hypertocfloat depth is #1 #3depth is \arabic{#3depth}}%
9486 \ifthenelse{\cnttest{#1}{<=}{\arabic{#3depth}}}%
9487   {%
9488     \LWR@startpars%
```

Create an HTML link to `filename#autoid-(float number)`, with text of the caption, of the given HTML class.

`\BaseJobname` is added to the label in case `xr` or `xr-hyper` are used.

```
9489      \LWR@subhyperrefclass{%
9490        \LWR@htmlrefsectionfilename{%
9491          \BaseJobname-autopage-\arabic{\LWR@nextautopage}%
9492        }%
9493        \LWR@origpound\LWR@print@mbox{autoid-\arabic{\LWR@nextautoid}}}%
9494      {#4}{toc#2}%

9495      \LWR@maybetocdata%

9496      \LWR@stoppars%
9497    }%
9498  {}%
9499 }
```

Automatically called by `\contentsline`:

```
\l@book {\langle name\rangle } {\langle page\rangle }
```

Uses `\DeclareDocumentCommand` in case the class does not happen to have a `\book`.

```
9500 \DeclareDocumentCommand{\l@book}{m m}{\hypertoc{-2}{book}{#1}{#2}}
```

```
\l@part {\langle name\rangle} {\langle page\rangle}
```

Uses \DeclareDocumentCommand in case the class does not happen to have a \part.

```
9501 \DeclareDocumentCommand{\l@part}{m m}{\hypertoc{-1}{part}{#1}{#2}}
```

```
\l@chapter {\langle name\rangle} {\langle page\rangle}
```

Uses \DeclareDocumentCommand in case the class does not happen to have a \chapter.

```
9502 \@ifundefined{chapter}
9503 {}
9504 {
9505 \DeclareDocumentCommand{\l@chapter}{m m}
9506   {\hypertoc{0}{chapter}{#1}{#2}}
9507 }
```

```

9578 \renewrobustcmd{\textup}[1]{\LWR@HTML@textup{\LWR@doindexentry{##1}}}%
9579 \renewrobustcmd{\textsc}[1]{\LWR@HTML@textsc{\LWR@doindexentry{##1}}}%
9580 \renewrobustcmd{\textulc}[1]{\LWR@HTML@textulc{\LWR@doindexentry{##1}}}%
9581 \renewrobustcmd{\textsi}[1]{\LWR@HTML@textsi{\LWR@doindexentry{##1}}}%
9582 \renewrobustcmd{\textit}[1]{\LWR@HTML@textit{\LWR@doindexentry{##1}}}%
9583 \renewrobustcmd{\textsl}[1]{\LWR@HTML@textsl{\LWR@doindexentry{##1}}}%
9584 }

```

\hyperindexref {<LWR@autoindex>}

\hyperindexref{LWR@autoindex} is inserted into *.ind by the *makeindex* style file lwarf.ist or the xindy style file lwarf.xdy.

```
9585 \newcommand{\hyperindexref}[1]{%
```

In long index lines with numerous entries, *makeindex* can insert a newline before the page number, resulting in an extra space before the first digit. If the first character is a space, remove it first.

```

9586 \def\LWR@tempone{#1}%
9587 \IfBeginWith{\LWR@tempone}{ }{%
9588   \StrGobbleLeft{\LWR@tempone}{1}[\LWR@tempone]%
9589 }{}}%

```

If a numeric entry, create a link. If not numeric, such as \see, use the entry as-is. \emph, \textit, etc. have been redefined above to create and format the entry.

```

9590 \IfInteger{\LWR@tempone}{%
9591   {\LWR@indexnameref{\LWR@tempone}}%
9592   {%
9593     \begingroup%
9594     \LWR@hyperindexrefnullified
9595     #1%
9596     \endgroup%
9597   }%
9598 }%

```

```
9599 \end{warpHTML}
```

for PRINT output: A null command for print mode, in case *hyperref* was not used:

```

9600 \begin{warpprint}
9601 \newcommand{\hyperindexref}[1]{#1}
9602 \end{warpprint}

```

for HTML & PRINT: For the `glossaries` package, try to prevent an error where `\glo@name` was not found:

```
9603 \begin{warpall}
9604 \providecommand{\glo@name}{}%
9605 \end{warpall}
```

77 Bibliography presentation

for HTML output: 9606 `\begin{warpHTML}`

```
\bibliography {\langle filenames\rangle}
```

Modified to use the base jobname instead of the `_html` jobname.

```
9607 \def\bibliography#1{%
9608   \if@filesw
9609     \immediate\write\auxout{\string\bibdata{\#1}}%
9610   \fi
9611 %     \@input{\jobname.bbl}% original
9612   \begingroup%
9613     \@input{\BaseJobname.bbl}% lwarp
9614   \endgroup%
9615 }
```

```
\@biblabel {\langle text-refnumber\rangle}
```

```
9616 \renewcommand{\@biblabel}[1]{[\#1]\quad}
```

Env thebibliography To emphasize document titles in the bibliography, the following redefines `\em` inside `thebibliography` to gather everything until the next closing brace, then display these tokens with `\textit`.

Adapted from embracedef.sty, which is by TAKAYUKI YATO:

<https://gist.github.com/zr-tex8r/b72555e3e7ad2f0a37f1>

```
9617 \AtBeginDocument{%
9618 \AtBeginEnvironment{thebibliography}{%
9619 \providecommand*\LWR@newem}[1]{\textit{\#1}}%
9620 %
9621 \renewrobustcmd{\em}{%
9622   \begingroup
9623     \gdef\LWR@em@after{\LWR@em@finish\LWR@newem}%
9624     \afterassignment\LWR@em@after
9625     \toks@\bgroup
9626   }%
9627 %
9628 \def\LWR@em@finish#1{%
9629   \xdef\LWR@em@after{\noexpand#1{\the\toks@}}%
9630 }%
9631 \LWR@em@after\egroup}
```

```

9632 }
9633 }% \AtBeginEnvironment{thebibliography}
9634 }% \AtBeginDocument

9635 \end{warpHTML}
```

78 Restoring original formatting

\LWR@restoreorigformatting Used to temporarily restore the print-mode meaning of a number of formatting, graphics, and symbols-related macros while generating SVG math or a `lateximage`.

Must be used inside a group.

Sets `\LWR@formatting` to print until the end of the group.

A number of packages will `\appto` additional actions to this macro.

Various packages add to this macro using `\appto`.

for HTML output: 9636 `\begin{warpHTML}`

```

9637 \newcommand*{\LWR@restoreorigformatting}{%
9638 \LWR@traceinfo{\LWR@restoreorigformatting}%
```

Numerous macros change their print/HTML meaning depending on `\LWR@formatting`:

```

9639 \renewcommand*{\LWR@formatting}{print}%
9640 \linespread{1}%
```

```
9641 \let\par\LWR@origpar%
```

```
9642 \LWR@select@print@hspace%
```

```

9643 \LetLtxMacro\hfil\LWR@orighfil%
9644 \let\hss\LWR@orighss%
9645 \let\llap\LWR@origllap%
9646 \let\rlap\LWR@origrlap%
9647 \let\hfilneg\LWR@orighfilneg%
```

```

9648 \let\,\LWR@origcomma% disable HTML short unbreakable space
9649 \let\thinspace\LWR@origthinspace% disable HTML short unbreakable space
9650 \let\negthinspace\LWR@orignegthinspace% disable HTML negative short unbreakable space
9651 \let\textellipsis\LWR@origtextellipsis%
9652 \let\textless\LWR@origtextless%
9653 \let\textgreater\LWR@origtextgreater%
```

```
9654 \let\&\LWR@origampersand%
```

```
9655 \LetLtxMacro\em\LWR@origem%
```

```

9656 \LetLtxMacro{\normalfont}{\LWR@orignormalfont}
9657 \let\sp{\LWR@origsp}
9658 \let\sb{\LWR@origsb}
9659 \LetLtxMacro{\textsuperscript}{\LWR@origtextsuperscript}
9660 \LetLtxMacro{\textsuperscript}{\LWR@orig@textsuperscript}
9661 \LetLtxMacro{\textsubscript}{\LWR@origtextsubscript}
9662 \LetLtxMacro{\textsubscript}{\LWR@orig@textsubscript}
9663 \LetLtxMacro{\underline}{\LWR@origunderline}
9664 \let~{\LWR@origtilde}
9665 \let\enskip{\LWR@origenskip}
9666 \let\quad{\LWR@origquad}
9667 \let\quad{\LWR@origqquad}

```

\endtabular must be restored to its original, instead of relying on lwarp's \LWR@formatted mechanism:

```

9668 \LetLtxMacro{\endtabular}{\LWR@origendtabular}
9669 \csletcs{\endtabular*}{\LWR@origendtabular*}%

9670 \LetLtxMacro{\noalign}{\LWR@orignoalign}
9671 \LetLtxMacro{\hline}{\LWR@orighline}

9672 \let\newline{\LWR@orignewline}
9673 \LetLtxMacro{\includegraphics}{\LWR@origincludegraphics}

9674 \LetLtxMacro{\@ensuredmath}{\LWR@origensuredmath}
9675 %
9676 \LWR@restoreorigaccents
9677 \LWR@restoreoriglists
9678 %
9679 \LWR@FBcancel
9680 }

9681 \end{warpHTML}

```

79 Math

79.1 Limitations

79.1.1 Math in section names

⚠ **math in section names**

If using named HTML files, in section names use paren math `\(x+y\)` instead of dollar math `$x+y$`. (Dollar math works, but appears in the filename.) Or, use a short name for the TOC entry without the math, or use `\texorpdfstring`:

```

\section{A name with math}
\texorpdfstring{$1+2=3$}{text description}

```

79.1.2 Rendering tradeoffs

Math rendering Math may be rendered as SVG graphics or using the MATHJAX JavaScript display engine.

- SVG files** Rendering math as images creates a new SVG file for each expression, except that an MD5 hash is used to combine identical duplicates of the same inline math expression into a single file, which must be converted to SVG only once. Display math is still handled as individual files, since it may contain labels or references which are likely to change.
- SVG inline** The SVG images are currently stored separately, but they could be encoded in-line directly into the HTML document. This may reduce the number of files and potentially speed loading the images, but slows the display of the rest of the document before the images are loaded.
- PNG files** Others L^AT_EX-to-HTML converters have used PNG files, sometimes pre-scaled for print resolution but displayed on-screen at a scaled down size. This allows high-quality print output at the expense of larger files, but SVG files are the preferred approach for scalable graphics.
- MathML** Conversion to MathML might be a better approach, among other things allowing a more compact representation of math than SVG drawings. Problems with MathML include limited browser support and some issues with the fine control of the appearance of the result. Also see section 10 regarding EPUB output with MATHJAX.

79.1.3 svg option

SVG math option For SVG math, math is rendered as usual by L^AT_EX into the initial PDF file using the current font¹⁸, then is captured from the PDF and converted to SVG graphics via a number of utility programs. The SVG format is a scalable-vector web format, so math may be typeset by L^AT_EX with its fine control and precision, then displayed or printed at any size, depending on (sometimes broken) browser support. An HTML alt attribute carries the L^AT_EX code which generated the math, allowing copy/paste of the L^AT_EX math expression into other documents.

SVG image font size For the lateximage environment, the size of the math and text used in the SVG image may be adjusted by setting \LateximageFontSizeName to a font size name—*without the backslash*, which defaults to:

```
\renewcommand{\LateximageFontSizeName}{\normalsize}
```

For inline SVG math, font size is instead controlled by \LateximageFontSize, which defaults to:

```
\newcommand*{\LateximageFontSize}{.75}
```

SVG math copy/paste For SVG math, text copy/paste from the HTML <alt> tags lists the equation number or tag for single equations, along with the L^AT_EX code for the math expression. For AMS environments with multiple numbers in the same environment, only the first and

¹⁸See section 521 regarding fonts and fractions.

last is copy/pasted, as a range. No tags are listed inside a starred \mathcal{AMS} environment, although the $\backslash tag$ macro will still appear inside the L^AT_EX math expression.

SVG math in TeX boxes

SVG math does not work inside TeX boxes, since a $\backslash newpage$ is required before and after each image.

79.1.4 MATHJAX option

MATHJAX math option

Prog MathJax

The popular MATHJAX alternative (mathjax.org) may be used to display math.

When MATHJAX is enabled, math is rendered twice:

1. As regular L^AT_EX PDF output placed inside an HTML comment, allowing equation numbering and cross referencing to be almost entirely under the control of L^AT_EX, and
2. As detokenized printed L^AT_EX commands placed directly into the HTML output for interpretation by the MATHJAX display scripts. An additional script is used to pre-set the equation number format and value according to the current L^AT_EX values, and the MATHJAX cross-referencing system is ignored in favor of the L^AT_EX internal system, seamlessly integrating with the rest of the L^AT_EX code.

79.1.5 Customizing MATHJAX

MATHJAX does not have preexisting support every possible math function. Additional MATHJAX function definitions may be defined. These will be declared at the start of each HTML page, and thus will have a global effect.

Examples:

```
\CustomizeMathJax{
    \newcommand{\expval}[1]{\langle#1\rangle}
    \newcommand{\abs}[1]{\lvert#1\rvert}
}

\CustomizeMathJax{\newcommand{\arsinh}{\text{arsinh}}}
\CustomizeMathJax{\newcommand{\arcosh}{\text{arcosh}}}
\CustomizeMathJax{\newcommand{\NN}{\mathbb{N}}}
```

79.1.6 MATHJAX limitations

MATHJAX limitations

Limitations when using MATHJAX include:

Prog MathJax

subequations

- MATHJAX itself does not support subequations. This may be improved by parsing the L^AT_EX math expression to manually insert tags, but this has not yet been done.

footnotes in math

- Footnotes inside equations are not yet supported while using MATHJAX.

- `lateximage`
- Math appearing inside a `lateximage`, and therefore also inside a `Tikz` or `picture` environment, is rendered as SVG math even if `MATHJAX` is used in the rest of the document.

`siunitx`

⚠ `siunitx` inside an equation

- Usage of `siunitx` inside a math equation is supported via a third-party `MATHJAX` extension. While inside a math expression, do not use `\SI` or `\si` inside `\text`, where it will be rendered as normal text.

<https://github.com/burnpanck/MathJax-siunitx>

Also see section 8.7.11.

`tabbing`

- A tabbing environment is emulated using an HTML `<pre>`. While `MATHJAX` is enabled inside tabbing, the browser may not correctly render the horizontal alignment of the math and text following after on the same line.

⚠ other macros and packages

- Other math-related macros and packages are not supported by `MATHJAX`, including `\ensuremath` and `biggdelim`, along with occasionally-used macros such as `\relax`. `lwarf` emulates footnotes, units, and `nicefrac` for `MathJax`.

79.1.7 Catcode changes

`preamble macros with math`

The math shift character `$` is not set for HTML output until after the preamble. Macros defined in the preamble which contain `$` must be enclosed between `\StartDefiningMath` and `\StopDefiningMath` to temporarily change to the HTML meaning of `$`:

```
\StartDefiningMath
\newcommand{...}
\StopDefiningMath
```

As an alternative, use `\(` and `\)` instead of `$`, in which case `\StartDefiningMath` and `\StopDefiningMath` are not necessary.

If a package defines macros using `$`, it may be necessary to use `\StartDefiningMath` and `\StopDefiningMath` before and after loading the package.

79.1.8 Complicated inline math objects

`\inlinemathnormal`
`\inlinemathother`

changing contents

complicated alt tag

An inline math expression is usually converted to a reusable hashed SVG math image, or a `MathJax` expression. The hash or expression depends on the contents of the math expression. In most cases this math expression is static, such as `$x+1$`, so the image can be reused for multiple instances of the same expression. In some cases, the math expression includes a counter or other object which may change between uses. Another problem is complicated contents which do not expand well in an `alt` tag. The macro `\inlinemathother` may be used before a dynamic math expression, and `\inlinemathnormal` after. Doing so tells `lwarf` to use an unhashed SVG math image, even if `MathJax` is in use. See section 44.

79.1.9 Complicated display math objects

`\displaymathnormal`

By default, or when selecting `\displaymathnormal`, `MATHJAX` math display environ-

ments print their contents as text into HTML, and SVG display math environments render their contents as SVG images and use their contents as the alt tag of HTML output. To do so, the contents are loaded into a macro for reuse. In some cases, such as complicated Tikz pictures, compilation will fail.

**\displaymathother
MathJax unsupported
complicated alt tag**

When selecting \displaymathother, it is assumed that the contents are more complicated than “pure” math. An example is an elaborate Tikz picture, which will not render in MATHJAX and will not make sense as an HTML alt tag. In this mode, MATHJAX is turned off, math display environments become SVG images, even if MATHJAX is selected, and the HTML alt tags become simple messages. The contents are internally processed as an environment instead of a macro argument, so complicated objects such as Tikz pictures are more likely to compile successfully.

79.2 HTML alt tag names

Redefinable names for the HTML alt tags, for translation according to the reader’s native language.

for HTML & PRINT: 9682 \begin{warpall}

\AltTextOpen The opening part of HTML alt tag for an image. The default is a left parenthesis.

9683 \newcommand*\{\AltTextOpen\}{(}

\AltTextClose The closing part of HTML alt tag for an image. The default is a right parenthesis.

9684 \newcommand*\{\AltTextClose\}{)}

\ImageAltText The HTML alt tag for an image.

Default: image

9685 \newcommand*\{\ImageAltText\}{image}

\MathImageAltText The HTML alt tag for an SVG math image.

Default: “math image”

9686 \newcommand*\{\MathImageAltText\}{math image}

\LWR@ThisAltText The HTML alt tag for the next image. Cleared after use, and also after each \latexitimage, \LWR@subsingle\$ dollar, and each use of MATHJAX.

9687 \newcommand*\{\LWR@ThisAltText\}{}

\ThisAltText {⟨text⟩}

Assigns the HTML alt tag for the next image generated by l warp, such as a \latexitimage, picture, or SVG math.

```
9688 \newcommand*{\ThisAltText}[1]{%
9689     \renewcommand{\LWR@ThisAltText}{#1}%
9690 }
```

\PackageDiagramAltText Appended to the `lateximage` HTML alt tag for the images generated by many packages.
Default: “diagram”

```
9691 \newcommand*{\PackageDiagramAltText}{diagram}
9692 \end{warpall}
```

79.3 Inline and display math

for HTML output: 9693 `\begin{warpHTML}`

Ctr `LWR@externalfilecnt` Counter for the external files which are generated and then referenced from the HTML:

```
9694 \newcounter{LWR@externalfilecnt}
```

Bool `LWR@indisplaymathimage` True if processing display math for SVG output. Inside a `lateximage`, display math is only set to print-mode output if `LWR@indisplaymathimage` is false. Used to avoid nullifying display math before it has been completed.

```
9695 \newbool{LWR@indisplaymathimage}
```

Bool `LWR@xfakebold` True if `xfakebold \setBold` is in use.

```
9696 \newbool{LWR@xfakebold}
9697 \boolfalse{LWR@xfakebold}
```

`\LWR@orig@setBold` Redefined by `l warp-xfakebold`.

```
9698 \newcommand*{\LWR@orig@setBold}{}%
```

`\LWR@orig@unsetBold` Redefined by `l warp-xfakebold`.

```
9699 \newcommand*{\LWR@orig@unsetBold}{}%
```

`\LWR@applyxfakebold` Redefined by `l warp-xfakebold`.

```
9700 \newcommand*{\LWR@applyxfakebold}{}%
```

`\LWR@setcurrentfont` Sets the actual L^AT_EX font to that which was selected for HTML output. Ex: In HTML mode, `\bfseries` sets `\LWR@f@series` to “bf”. This sets the PDF output here for use inside a `lateximage`.

```
9701 \newcommand*{\LWR@setcurrentfont}{%
9702     \LWR@traceinfo{Using font family \LWR@f@family}}%
```

```

9703  \@nameuse{LWR@print@\LWR@f@family family}%
9704  \LWR@traceinfo{Using font series \LWR@f@series}%
9705  \@nameuse{LWR@print@\LWR@f@series series}%
9706  \LWR@traceinfo{Using font shape \LWR@f@shape}%
9707  \@nameuse{LWR@print@\LWR@f@shape shape}%
9708  \LWR@traceinfo{Using font caps shape \LWR@f@shapecaps}%
9709  \@nameuse{LWR@print@\LWR@f@shapecaps shape}%
9710 }

```

\\$ Plain dollar signs appearing in the HTML output may be interpreted by MATHJAX to be math shifts. For a plain text dollar \\$, use an HTML entity to avoid it being interpreted by MATHJAX, unless are inside a `lateximage`, in which case it will not be seen by MATHJAX.

```

9711 \let\LWR@origtextdollar\$
9712
9713 \renewcommand*\{$}{%
9714 \ifnumcomp{\value{LWR@lateximagedepth}}{>}{0}{%
9715 {\LWR@origtextdollar}{%
9716 {\HTMLunicode{00024}}}{%
9717 }

```

File `lwarp_baseline_marker.png`
 File `lwarp_baseline_marker.eps` A marker to be used to help `pdfcrop` identify the inline math baseline and width. If either `graphicx` or `graphics` is loaded, this marker is placed at the lower left and lower right corners of the inline math. `pdfcrop` is then able to identify the width of the image, and also the height of an image such as a horizontal dash which does not otherwise touch the baseline.

A marker with alpha or opacity of 0% is not registered by `pdfcrop`, so the marker is a small square block of 1% alpha, which seems to work while still being effectively invisible in the final SVG image.

If `graphicx` is loaded, this marker is sized as a tiny 1 sp square. If `graphics` is loaded, this marker is used at its default size of around .25 pt. If neither `graphics` package is loaded, the marker is replaced by a 10 sp horizontal space, and there is no assistance for determining baseline or width of the inline math image. The best results are obtained when using `graphicx`.

`\LWR@addbaselinemarker` Places a small marker in an svg inline image. If `graphics` or `graphicx` are loaded, the marker is a mostly transparent image. If neither is loaded, no marker is used.

```

9718 \AtBeginDocument{%
9719
9720 \ifpdf
9721   \newcommand*{\LWR@baselinename}{lwarp_baseline_marker.png}

9756
9757 }% AtBeginDocument

```

\LWR@subsingle\$ * {\langle 2: alt text \rangle} {\langle 3: add'l hashing \rangle} {\langle 4: math expression \rangle}

For inline math. Uses MathJax, or for SVG math the image is measured and adjusted to the baseline of the HTML output, and placed inside a `teximage`.

image filename hashing

If starred, a hashed filename is used. If so, the hash is based on the `alt` tag and also the additional hashing argument.

This may be used to provide an expression with a simple `alt` tag but also enough additional information to provide a unique hash.

An example is when the expression is a complicated TeX expression, which would not copy/paste well. A simplified tag may be used, while the complicated expression is duplicated in the additional hashing argument.

Another example is when the expression is simple, but the image depends on options. These options may be decoded into text form and included in the additional hashing argument in order to make the hash unique according to the set of options, even if the simple `alt` tag is still the same.

```

9758 \newlength{\LWR@singledollarwidth}
9759 \newlength{\LWR@singledollarheight}
9760 \newlength{\LWR@singledollardepth}
9761
9762 \newsavebox{\LWR@singledollarbox}

```

```

9763
9764 \NewDocumentCommand{\LWR@subsingle$}{s m m}{%
9765 \LWR@traceinfo{\LWR@subsingle$}%
9766 \ifnumcomp{\value{\LWR@lateximagedepth}}{>}{0}%
9767 {%
9768 \LWR@traceinfo{\LWR@subsingle$: already in a \textrm{ lateximage}}%
9769     #4% contents
9770 }%
9771 {%
9772 \begingroup%

```

Support for `xfakebold`:

```
9773 \LWR@applyxfakebold%
```

MathJax cannot parse the often complicated `\textrm{TEX}` expressions which appear in the various uses of `\ensuredmath`. `\ensuremath` forces the alt tag to “`(math image)`”, as translated according to `\MathImageAltText`. If this is the case, force the use of a `\textrm{ lateximage}` even if MathJax. Likewise for `siunitx` if `parse-numbers=false`.

If MathJax, or if formatting math for a word processor, and not `\ensuredmath`, and not a dynamic math expression, print the math expression:

```

9774 \ifboolexpr{%
9775     (
9776         bool{mathjax} or
9777         ( bool{FormatWP} and bool{WPMarkMath} )
9778     ) and
9779     ( not test {
9780         \ifstreq{#2}
9781             {\AltTextOpen\MathImageAltText\AltTextClose} % from \ensuredmath
9782         }
9783     ) and
9784     ( not bool{LWR@dynamicmath} )
9785 }%

```

For `MATHJAX`, print the math between `\(` and `\)`:

```

9786 {%
9787     \LWR@traceinfo{\LWR@subsingle$: Mathjax}%
9788     {\textbackslash(\textbackslashHTMLsanitize{#4}\textbackslash)}%
9789 }% mathjax

```

For `SVG`, print the math inside a `\textrm{ lateximage}`, with an `<alt>` tag of the `\textrm{ LATEX}` code, and a `css` style to control the baseline adjustment.

```

9790 {%
9791     \LWR@traceinfo{\LWR@subsingle$: NOT mathjax, or is ensuremath, or is dynamic}%

```

Measure the depth, width, and height of the math image:

```
9792 \begingroup%
```

Temporarily disable formatting while measuring the image parameters:

```
9793     \LWR@restoreorigformatting%
9794     \RenewDocumentEnvironment{lateximage}{s o s o o}{ }{ }% inside group
9795     \LWR@print@normalsize%
```

Temporarily set font for the HTML PDF output:

```
9796     \LWR@setcurrentfont%
```

`lateximagedepth` must be nested to avoid generating paragraph tags. *AMS* math modifies the `\text` macro such that `\addtocounter` does not always occur as expected. Lower-level code is used instead.

```
9797     \global\advance\c@LWR@lateximagedepth 1\relax%
```

Typeset and save the contents, depending on how they were generated:

SVG math: `\LWR@origensuredmath` is part of argument #4.

SVG math \ensuremath: `\LWR@origensuredmath` is part of argument #4.

SVG dynamic math: `\LWR@origensuredmath` is part of argument #4.

Mathjax: Argument #4 is the contents of the math expression without `\LWR@origensuredmath`. This case is handled above.

Mathjax \ensuremath: `\LWR@origensuredmath` is part of argument #4.

Mathjax dynamic math: Argument #4 is the contents of the math expression without `\LWR@origensuredmath`, so `\LWR@origensuredmath` is added below.

\ifmmode: Included “just in case”.

```
9798     \ifmmode%
9799         \global\sbox{\LWR@singledollarbox}{#4}%
9800     \else%
9801         \ifbool{\LWR@dynamicmath}{%
9802             \ifbool{\mathjax}{%
9803                 \global\sbox{\LWR@singledollarbox}{\LWR@origensuredmath{#4}}%
9804             }{%
9805                 \global\sbox{\LWR@singledollarbox}{#4}%
9806             }%
9807         }{%
9808             \global\sbox{\LWR@singledollarbox}{#4}%
9809         }%
9810     \fi%
```

Add a small and almost transparent marker at the depth of the image.

A math minus sign has the same depth as a plus, even though it does not draw anything below the baseline. This means that `pdfcrop` would crop the image without depth. The marker below the baseline is seen by `pdfcrop` and preserves the depth.

```

9811   \global\sbox{\LWR@singledollarbox}{%
9812     \usebox{\LWR@singledollarbox}%
9813     \raisebox{-\dp\LWR@singledollarbox}{%
9814       \LWR@addbaselinemarker%
9815     }%
9816   }%

```

More low-level code to undo the counter change.

```
9817   \global\advance\c@LWR@lateximagedepth -1\relax% Due to AmS \text macro.
```

Measure the depth:

```

9818   \setlength{\LWR@singledollardepth}{%
9819     \LateximageFontScale\dp\LWR@singledollarbox%
9820   }%

```

Make the length a global change:

```
9821   \global\LWR@singledollardepth=\LWR@singledollardepth%
```

Likewise for width:

```

9822   \setlength{\LWR@singledollarwidth}{%
9823     \LateximageFontScale\wd\LWR@singledollarbox%
9824   }%
9825   \global\LWR@singledollarwidth=\LWR@singledollarwidth%

```

Likewise for total height:

```

9826   \setlength{\LWR@singledollarheight}{%
9827     \LateximageFontScale\ht\LWR@singledollarbox%
9828   }%
9829   \addtolength{\LWR@singledollarheight}{%
9830     \LateximageFontScale\dp\LWR@singledollarbox%
9831   }%
9832   \global\LWR@singledollarheight=\LWR@singledollarheight%
9833   \endgroup%

```

Set a style for the the height or width. The `em` unit is used so that the math scales according to the user's selected font size.

Start with the greater of the width or the height, biased towards the width:

```

9834   \ifdimgreater{\LWR@singledollarwidth}{.7\LWR@singledollarheight}{%
9835     \def\LWR@singledollarstyle{%
9836       width:\LWR@convertto{em}{\the\LWR@singledollarwidth} em%
9837     }%
9838   }{%
9839     \def\LWR@singledollarstyle{%
9840       height:\LWR@convertto{em}{\the\LWR@singledollarheight} em%
9841     }%
9842   }%

```

If a very narrow width, use the height.

```

9843  \ifdimless{\LWR@singledollarwidth}{.2em}%
9844  {%
9845      \def\LWR@singledollarstyle{%
9846          height:\LWR@convertto{em}{\the\LWR@singledollarheight} em%
9847      }%
9848  }%
9849  {}%

```

If very wide and short, use the width:

```

9850  \ifdimless{\LWR@singledollarheight}{.2em}%
9851  {%
9852      \def\LWR@singledollarstyle{%
9853          width:\LWR@convertto{em}{\the\LWR@singledollarwidth} em%
9854      }%
9855  }%
9856  {}%

```

If there is significant text depth, add the depth to the style.

```

9857  \ifdimgreater{\LWR@singledollardepth}{0.05ex}%
9858  {%
9859      \def\LWR@singledollardepthstyle{%
9860          \; % extra space
9861          \LWR@print@mbox{%
9862              vertical-align:-\LWR@convertto{em}{\the\LWR@singledollardepth} em%
9863          } % extra space
9864      }%
9865  \def\LWR@singledollardepthstyle{}%
9866  }%

```

Create the `lateximage` using the alternate tag and the computed size and depth. The star causes `lateximage` to use an MD5 hash as the filename. When hashing, also include the current font and color in the hash.

```

9867  \ifbool{\LWR@dynamicmath}{%
9868      \LWR@traceinfo{subsingledollar: dynamic}%
9869      \begin{lateximage}% no hashing
9870          [\MathImageAltText]% alt tag
9871          []% no add'l hashing
9872          [\LWR@singledollarstyle \LWR@singledollardepthstyle]%
9873      }%
9874  \LWR@traceinfo{subsingledollar: static}%
9875  \IfValueTF{\#1}{%
9876      \LWR@findcurrenttextcolor% sets \LWR@tempcolor

```

Support for `xfakebold`:

```

9877  \ifbool{\LWR@xfakebold}{%
9878      {\def\LWR@tempone{Y}}%
9879      {\def\LWR@tempone{N}}%

```

```

9880          \begin{lateximage} *% use hashing
9881              [#2] % alt
9882                  *% do not add open/closing braces
9883                  [% add'l' hashing
9884                      #3%
9885                      FM\LWR@f@family%
9886                      SR\LWR@f@series%
9887                      SH\LWR@f@shape%

```

Place small and almost transparent markers on the baseline at the left and right edges of the image. These markers are seen by *pdfcrop*, and force vertically-centered objects such as a dash to be raised off the baseline in the cropped image, and also force the total width and left/right margins to be correct. (Except that in some fonts a character may exceed the bounding box, and thus may appear wider than expected when converted to an image.)

```
9900      \LWR@addbaselinemarker%
```

Support for *xfakebold*:

```
9901      \LWR@applyxfakebold%
```

Typeset the contents:

79.4 MATHJAX support

Ctr LWR@nextequation Used to add one to compute the next equation number.

```
10044 \newcounter{LWR@nextequation}
```

\LWR@syncmathjax Sets the MATHJAX equation format and number for the following equations.

These MATHJAX commands are printed inside “\(`” and “\)`” characters. They are printed to HTML output, not interpreted by L^AT_EX.

```
10045 \newcommand{\LWR@syncmathjax}{%
```

If using chapters, place the chapter number in front of the equation. Otherwise, use the simple equation number.

```
10046 \ifcsdef{thechapter}{
10047     \InLineClass{hidden}{
10048         \textbackslash(
10049         \textbackslash{}seteqsection \{\thechapter\}
10050         \textbackslash)
10051     }
10052 }
10053 {}% not using chapters
```

MATHJAX doesn't allow setting the equation number to 1:

```
10054 \ifthenelse{\cnttest{\value{equation}}>0}
10055 {
```

Tell MATHJAX that the next set of equations begins with the current L^AT_EX equation number, plus one.

```
10056     \setcounter{\LWR@nextequation}{\value{equation}}
10057     \addtocounter{\LWR@nextequation}{1}
```

Place the MATHJAX command inside “\(`” and “\)`” characters, to be printed to HTML, not interpreted by L^AT_EX.

```
10058     \InLineClass{hidden}{
10059         \textbackslash(
10060         \textbackslash{}seteqnumber \{\arabic{\LWR@nextequation}\}
10061         \textbackslash)
10062     }
10063 }{}% not eq > 0
10064 }
```

\LWR@hidelatexequation {\langle environment\rangle} {\langle contents\rangle}

Creates the L^AT_EX version of the equation inside an HTML comment.

```
10065 \NewDocumentCommand{\LWR@hidelatexequation}{m +m}{%
```

Stop HTML paragraph handling and open an HTML comment:

```
10066 \LWR@stoppars
10067 \LWR@htmlopencomment
10068
```

Start the L^AT_EX math environment inside the HTML comment:

```
10069 \begingroup
10070 \nameuse{LWR@orig#1}
```

While in the math environment, restore various commands to their L^AT_EX meanings.

```
10071 \LWR@restoreorigformatting
```

See \LWR@htmlmathlabel in section 79.7.1.

Print the contents of the equation:

```
10072 #2
```

End the L^AT_EX math environment inside the HTML comment:

```
10073 \nameuse{LWR@origend#1}
10074 \endgroup
10075
```

Close the HTML comment and resume HTML paragraph handling:

```
10076 \LWR@htmclosecomment
10077 \LWR@startpars
10078 }
```

\LWR@addmathjax {*environment*} {*contents*}

Given the name of a math environment and its contents, create a MATHJAX instance. The contents are printed to HTML output, not interpreted by L^AT_EX.

```
10079 \NewDocumentCommand{\LWR@addmathjax}{m +m}{%
```

Enclose the MATHJAX environment inside printed “\(`” and “\)`” characters.

```
10080 \LWR@origtilde\LWR@orignewline
10081 \textbackslash{}begin\{\#1\}
```

Print the contents, sanitizing for HTML special characters.

```
10082 \LWR@HTMLsanitizeexpand{\detokenize\expandafter{\#2}}
```

Close the MATHJAX environment:

```
10083 \textbackslash{}end\{\#1\}
10084 \LWR@orignewline
10085 }
```

79.5 Equation environment

Remember existing equation environment, after redefined by amsmath, if loaded.

```

10086 \AtBeginDocument{
10087 \let\LWR@origequation\equation
10088 \let\origendequation\endequation
10089 \csletcs{\LWR@origequation*}{equation*}
10090 \csletcs{\origendequation*}{endequation*}
10091 }

```

\LWR@doequation {*env contents*} {*env name*}

For SVG math output, the contents are typeset using the original equation inside a `lateximage`, along with an `<alt>` tag containing a detokenized copy of the L^AT_EX source for the math.

For MATHJAX output, the contents are typeset in an original equation environment placed inside a HTML comment, with special processing for `\labels`. The contents are also printed to the HTML output for processing by the MATHJAX script.

```

10092 \newcommand*{\LWR@doequation}[2]{%
10093

```

If `mathjax` or `FormatWP`, print the L^AT_EX expression:

```
10094 \ifboolexpr{bool{mathjax} \or ( bool{FormatWP} \and bool{WPMarkMath} ) }%
```

MATHJAX output:

```
10095 {
```

Print commands to syncronize MATHJAX's equation number and format to the current L^AT_EX chapter/section and equation number:

```
10096 \LWR@syncmathjax
```

Print the L^AT_EX math inside an HTML comment:

```

10097 \LWR@hidelatexequation{#2}{#1}
10098 }
```

SVG output: Create the `lateximage` along with an HTML `<alt>` tag having an equation number, the L^AT_EX equation environment commands, and the contents of the environment's `\BODY`.

```
10099 {% not mathjax
```

Begin the `lateximage` with an `<alt>` tag containing the math source:

```

10100 \ifstreq{\#2}{equation*}{%
10101   \begin{BlockClass}{displaymath}%
10102 }{%
10103   \begin{BlockClass}{displaymathnumbered}%
10104 }%
10105 \LWR@newautoidanchor%
10106 \booltrue{\LWR@indisplaymathimage}%

```

```

10107  \begin{ lateximage } [%
10108      \ifstreq{\#2}{equation*}{%
10109          \ifdefequal{\LWR@equationtag}{\theequation}{%
10110 %                         no tag was given
10111          }{%
10112              (\LWR@equationtag) % tag was given
10113          }%
10114      }{%
10115          (\LWR@equationtag) % automatic numbering
10116      }%
10117      \textbackslash begin\{#2\} % extra space

10119      \textbackslash end\{#2\}%
10120  ]*% alt tag

```

Support for `xfakebold`:

```
10121  \LWR@applyxfakebold%
```

Create the actual L^AT_EX-formatted equation inside the `lateximage` using the contents of the environment.

```

10122  \@nameuse{\LWR@orig#2}%
10123  #1% contents collected by \collect@body
10124  \@nameuse{\LWR@origend#2}%
10125  \end{ lateximage }%
10126  \end{BlockClass}%
10127 }% not mathjax

```

Clear the single-use alt text:

```
10128 \gdef\LWR@ThisAltText{}%
10129 }
```

After the environment, if MATHJAX, print the math to the HTML output for MATHJAX processing:

```

10130 \newcommand*{\LWR@doendequation}[1]{%
10131     \ifboolexpr{bool{mathjax} or ( bool{FormatWP} and bool{WPMarkMath} ) }{%
10132     {%
10133         \LWR@addmathjax{\#1}{\BODY}%
10134     }{%
10135

```

Clear the single-use alt text:

```
10136 \gdef\LWR@ThisAltText{}%
10137 }
```

Remove existing equation environment:

```
10138 \AtBeginDocument{%
10139 \let\equation\relax
```

```

10140 \let\endequation\relax
10141 \csletcs{equation*}{relax}
10142 \csletcs{\endequation*}{relax}
10143 }

```

Env equation The new equation environment is created with `\NewEnviron` (from the `environ` package), which stores the contents of its environment in a macro called `\BODY`.

```

10144 \AtBeginDocument{
10145 \NewEnviron{equation}%
10146 {\LWR@doequation{\BODY}{equation}}%
10147 [\LWR@doendequation{equation}]
10148
10149 \LetLtxMacro{\LWR@equationnormal}{equation}
10150 \LetLtxMacro{\endLWR@equationnormal}{\endequation}
10151 }

```

Env equation*

```

10152 \AtBeginDocument{
10153 \NewEnviron{equation*}%
10154 {\LWR@doequation{\BODY}{equation*}}%
10155 [\LWR@doendequation{equation*}]

10157 \csletcs{\LWR@equationnormalstar}{equation*}
10158 \csletcs{\LWR@endequationnormalstar}{endequation*}
10159 }

```

Remember the “less” version of `equation`, which uses `MATHJAX` and `alt` tags, but does not support complicated contents such as some `Tikz` expressions.

```

10160 \AtBeginDocument{
10161 \LetLtxMacro{\LWR@equationless}{equation}
10162 \LetLtxMacro{\endLWR@equationless}{\endequation}
10163 \csletcs{\LWR@equationlessstar}{equation*}
10164 \csletcs{\LWR@endequationlessstar}{endequation*}
10165 }

```

79.6 `\displaymathnormal` and `\displaymathother`

\displaymathnormal By default, or when selecting `\displaymathnormal`, `MATHJAX` math display environments print their contents as text into `HTML`, and `SVG` display math environments render their contents as `SVG` images and use their contents as the `alt` tag of `HTML` output. To do so, the contents are loaded into a macro for reuse. In some cases, such as complicated `Tikz` pictures, compilation will fail.

**\displaymathother
MathJax unsupported
complicated alt tag** When selecting `\displaymathother`, it is assumed that the contents are more complicated than “pure” math. An example is an elaborate `Tikz` picture, which will not render in `MATHJAX` and will not make sense as an `HTML` alt tag. In this mode, `MATHJAX` is turned off, math display environments become `SVG` images, even if `MATHJAX` is selected, and the `HTML` alt tags become simple messages. The contents are internally

processed as an environment instead of a macro argument, so complicated objects such as Tikz pictures are more likely to compile successfully.

\displaymathnormal simple math objects Use when display math environments have simple math which is to sent to MATHJAX or included in HTML alt tags.

```
10166 \newcommand*{\displaymathnormal}{%
10167 \ifbool{LWR@origmathjax}{\booltrue{mathjax}}{\boolfalse{mathjax}}%
10168 \LetLtxMacro{\LWR@openbracketnormal}%
10169 \LetLtxMacro{\LWR@closebracketnormal}%
10170 \LetLtxMacro{\displaymath}{\LWR@displaymathnormal}%
10171 \LetLtxMacro{\enddisplaymath}{\endLWR@displaymathnormal}%
10172 \LetLtxMacro{\equation}{\LWR@equationnormal}%
10173 \LetLtxMacro{\endequation}{\endLWR@equationnormal}%
10174 \csletcs{\equation*}{\LWR@equationnormalstar}%
10175 \csletcs{\endequation*}{\LWR@endequationnormalstar}%
10176 }
```

\displaymathother complicated math objects Use when display math environments have complicated objects which will not work with MathJax or should not be included in HTML alt tags. Complicated contents are more likely to compile correctly.

```
10177 \newcommand*{\displaymathother}{%
10178 \boolfalse{mathjax}}%
10179 \LetLtxMacro{\displaymath}{\LWR@displaymathother}%
10180 \LetLtxMacro{\enddisplaymath}{\endLWR@displaymathother}%
10181 \LetLtxMacro{\[\LWR@displaymathother}%
10182 \LetLtxMacro{\]\endLWR@displaymathother}%
10183 \LetLtxMacro{\equation}{\LWR@equationother}%
10184 \LetLtxMacro{\endequation}{\endLWR@equationother}%

```

for HTML output: 10193 \begin{warpHTML}

79.7 AMS Math environments

79.7.1 Support macros

Bool LWR@amsmultiline True if processing a multiline environment.

To compensate for multiline-specific code, LWR@amsmultiline is used to add extra horizontal space in \LWR@htmlmathlabel if it is used in an amsmath environment which is not a multiline environment and not an equation.

```
10194 \newbool{LWR@amsmultiline}
10195 \boolfalse{LWR@amsmultiline}
```

\LWR@htmlmathlabel {<label>}

lwarp points \ltx@label here. This is used by \label when inside a LATEX AMS math environment's math display environment.

\LWR@origltx@label points to the LATEX original, modified by lwarp, then by amsmath, then by cleveref.

```
10196 \newcommand*{\LWR@htmlmathlabel}[1]{%
10197 \LWR@traceinfo{\LWR@htmlmathlabelb #1}}%
```

If mathjax or FormatWP, print the LATEX expression:

```
10198 \ifboolexpr{bool{mathjax} or ( bool{FormatWP} and bool{WPMarkMath} ) }{%
10199 {}}
```

The combined LATEX & HTML label is printed in a \text field:

```
10200 \text{%
```

Shift the label over to the right side of the environment to avoid over-printing the math:

```
10201 \ifbool{LWR@amsmultiline}{}{\hspace*{\totwidth}}%
```

Temporarily end the HTML comment, insert the LATEX & HTML label, then resume the HTML comment. \@firstofone is required to remove extra braces introduced by the amsmath package.)

```
10202 \LWR@htmlclosecomment%
10203 \LWR@origltx@label{#1}%
10204 \LWR@htmlopencomment%
10205 }% text
10206 }% mathjax
10207 {%
10208 \LWR@origltx@label{#1}%
10209 }%
10210 }
```

\LWR@beginhideamsmath Starts hiding L^AT_EX math inside an HTML comment.

```

10211 \newcommand*{\LWR@beginhideamsmath}{
10212 \LWR@stopars
10213 \LWR@origtilde\LWR@orignewline
10214 \LWR@htmlopencomment
10215
10216 \begingroup
10217 \LWR@restoreorigformatting
10218 }
```

\LWR@endhideamsmath Ends hiding L^AT_EX math inside an HTML comment.

```

10219 \newcommand*{\LWR@endhideamsmath}{
10220 \endgroup
10221
10222 \LWR@htmclosecomment
10223 \LWR@orignewline
10224 \LWR@startpars
10225 }
```

79.7.2 Environment patches

The `amsmath` environments already collect their contents in `\@envbody` for further processing. `eqnarray` is not an \mathcal{AM} S package, and thus requires special handling.

For `svg` math: Each environment is encapsulated inside a `lateximage` environment, along with a special optional argument of `\LWR@amsmathbody` or `\LWR@amsmathbodynumbered` telling `lateximage` to use as the HTML `<alt>` tag the environment's contents which were automatically captured by the \mathcal{AM} S environment.

For `MATHJAX`: Each environment is synched with L^AT_EX's equation numbers, typeset with L^AT_EX inside an HTML comment, then printed to HTML output for `MATHJAX` to process.

`Env eqnarray` This environment is not an \mathcal{AM} S environment and thus its body is not automatically captured, so the `environ` package is used to capture the environment into `\BODY`.

```

10226 \let\LWR@origeqnarray\eqnarray
10227 \let\LWR@origendeqnarray\endeqnarray
```

To remember whether the starred environment was used, and thus whether to number the equations:

```

10228 \newbool{\LWR@numbereqnarray}
10229 \booltrue{\LWR@numbereqnarray}
```

Common code used by `eqnarray` and `Beqnarray` (from `fancybox`):

```
10230 \newcommand{\LWR@eqnarrayfactor}{%
```

If `mathjax` or `FormatWP`, print the L^AT_EX expression:

```
10231 \ifboolexpr{bool{mathjax} or ( bool{FormatWP} and bool{WPMarkMath} ) }%
10232 {%
```

If MATHJAX, the environment contents (the `\BODY`) are executed in a HTML comment to trigger the correct equation number increment (if not starred), then are included verbatim in the output for MATHJAX to interpret:

```
10233     \LWR@syncmathjax
10234     \boolfalse{\LWR@amsmultiline}
10235     \ifbool{\LWR@numbereqnarray}
10236     {
```

If numbering the equations, execute a copy inside an HTML comment block:

```
10237     \LWR@beginhideamsmath
10238     \LWR@origeqnarray
10239     \BODY
10240     \LWR@origendeqnarray
10241     \LWR@endhideamsmath
```

Then print the (sanitized) contents to the output for MATHJAX to interpret:

```
10242     \LWR@addmathjax{eqnarray}{\BODY}
10243     }%
10244     { % not \LWR@numbereqnarray
```

If not numbering equations, just create the contents for MATHJAX:

```
10245     \LWR@addmathjax{eqnarray*}{\BODY}
10246     }% \LWR@numbereqnarray
10247 }% mathjax
10248 { % not mathjax
10249     \ifbool{\LWR@numbereqnarray}
10250     {
```

For numbered SVG equations, first create a `lateximage` with an `alt` attribute containing sanitized copy of the source code:

```
10251     \begin{BlockClass}{displaymathnumbered}%
10252     \LWR@newautoidanchor%
10253     \booltrue{\LWR@indisplaymathimage}%
10254     \begin{lateximage}[(\LWR@startingequationtag--\LWR@equationtag)
10255             \LWR@addmathjax{eqnarray}{\BODY}]*
```

Support for `xfakebold`:

```
10256     \LWR@applyxfakebold%
```

Create the image contents using an actual eqnarray:

```
10257     \LWR@origeqnarray
```

```

10258      \BODY
10259      \LWR@origendeqnarray
10260      \end{lateximage}
10261      \end{BlockClass}
10262  }%
10263  {%
  \not \LWR@numbereqnarray

```

If not numbered, do the same, but an extra \nonumber seems to be required:

```

10264      \begin{BlockClass}{displaymath}
10265      \LWR@newautoidanchor%
10266      \booltrue{\LWR@indisplaymathimage}%
10267      \begin{lateximage}[\LWR@addmathjax{eqnarray*}{\BODY}]*

```

Support for *xfakebold*:

```

10268      \LWR@applyxfakebold%
10269      \LWR@origeqnarray
10270      \BODY
10271      \nonumber
10272      \LWR@origendeqnarray
10273      \end{lateximage}
10274      \end{BlockClass}
10275  }%
  \not \LWR@numbereqnarray
10276 }%
  \not \mathjax

```

Default to number equations in the future:

```
10277 \booltrue{\LWR@numbereqnarray}
```

Clear the single-use alt text:

```

10278 \gdef\LWR@ThisAltText{}%
10279 }

```

eqnarray itself is made with a blank line before and after to force it to be on its own line:

```

10280 \RenewEnviron{eqnarray}
10281 {%
10282
10283 \LWR@eqnarrayfactor
10284
10285 }

```

The starred version is patched to turn off the numbering:

```

10286 \csgpreto{eqnarray*}{\boolfalse{\LWR@numbereqnarray}}
10287 \end{warpHTML}

```

80 Lateximages

80.1 Description

Env lateximage A `lateximage` is a piece of the document which is typeset in L^AT_EX then included in the HTML output as an image. This is used for math if `svg` math is chosen, and also for the `picture`, `tikzpicture`, and other environments.

Before typesetting the `lateximage` a large number of formatting, graphics, and symbols-related macros are temporarily restored to their print-mode meaning by `\LWR@restoreorigformatting`. (See section 78.)

A `lateximage` is typeset on its own PDF page inside an HTML comment which starts on the preceding page and ends on following page, and instructions are written to `lateximage.txt` for `lwarpmk` to extract the `lateximage` from the page of the PDF file then generate an accompanying `.svg` file image file. Meanwhile, instructions to show this image are placed into the HTML file after the comment.

An HTML `` is created to hold both the HTML comment, which will have the `pdftotext` conversion, and also the link to the final `.svg` image.

A L^AT_EX label is used to remember which PDF page has the image. A label is used because footnotes, endnotes, and pagenotes may cause the image to appear at a later time. The label is declared along with the image, and so it correctly remembers where the image finally ended up.

HTML alt tag The HTML alt tag is set to the L^AT_EX source for `svg` math, some chemistry expressions, and perhaps some other expressions which make sense for text copy/paste. In some other cases, the alt tag is set according to the package name.

When creating an `svg` math image, its HTML alt tag may be set to the math expression, which may be hashed for image reuse. In the case of `\ensuremath` or after `\inlinemathother`, where the contents require a unique image for each instance of the same expression, the alt tag is set to `\MathImageAltText`, along with `\AltTextOpen` and `\AltTextClose`, and the image is not reused.

This alt expression is visible in the browser if images are not loaded, and appears when the text is copied and pasted. The default is “math image”, and it may be changed according to the document’s language. This may be set in the preamble, or changed as necessary inside the document, where it will affect the following `svg` math images.

For many packages, the output is placed inside a `lateximage` with an HTML alt tag set to the package name followed by `\PackageDiagramAltText`. For example:

(-xy- diagram)

This expression is visible in the browser if images are not loaded, and appears when the text is copied and pasted. The default is “diagram”, and it may be changed according to the document’s language. This may be set in the preamble, or changed as necessary inside the document, where it will affect the following package diagrams.

SVG image font size For the `lateximage` environment, the size of the math and text used in the `svg` image

may be adjusted by setting `\LateximageFontSizeName` to a font size name—*without the backslash*, which defaults to:

```
\renewcommand{\LateximageFontSizeName}{\normalsize}
```

For inline SVG math, font size is instead controlled by `\LateximageFontSizeScale`, which defaults to:

```
\newcommand*{\LateximageFontSizeScale}{.75}
```

80.2 Support counters and macros

for HTML output: 10288 `\begin{warpHTML}`

Ctr `LWR@lateximagenumber` Sequence the images.

```
10289 \newcounter{LWR@lateximagenumber}
10290 \setcounter{LWR@lateximagenumber}{0}
```

Ctr `LWR@lateximagedepth` Do not create `\latexitimage` inside of `\latexitimage`.

```
10291 \newcounter{LWR@lateximagedepth}
10292 \setcounter{LWR@lateximagedepth}{0}
```

A few utility macros to write special characters:

```
10293 \edef\LWR@hashmark{\string#} % for use in \write
10294 \edef\LWR@percent{\@percentchar} % for use in \write
```

Ctr `LWR@LIpage` Used to reference the PDF page number of a `\latexitimage` to be written into `<project>-images.txt`.

```
10295 \newcounter{LWR@LIpage}
10296 \end{warpHTML}
```

80.3 Font size

for HTML & PRINT: 10297 `\begin{warpall}`

`\LateximageFontSizeName` Declares how large to write text in `\latexitimages`. The `.svg` file text size should blend well with the surrounding HTML text size.

 **no backslash** *Do not include the leading backslash in the name.*

```
10298 \newcommand*{\LateximageFontSizeName}{\normalsize}
```

`\LateximageFontSizeScale` Declares how large to scale inline SVG math images. The `.svg` file text size should blend well with the surrounding HTML text size. The default is 1, but it may be redefined as needed depending on the HTML font.

```
10299 \newcommand{\LateximageFontSize}{1}
10300 \end{warpall}
```

80.4 Sanitizing math expressions for HTML

for HTML output: 10301 \begin{warpHTML}

```
\LWR@HTMLsanitize {\langle text\rangle}
```

Math expressions are converted to `latexitimages`, and some math environments may contain &, <, or >, which should not be allowed inside an HTML `<alt>` tag, so must convert them to HTML entities.

Two versions follow, depending on expansion needs. There may be a better way...

```
10302 \newrobustcmd{\LWR@HTMLsanitize}[1]{%
```

Cancel French `babel` character handling, and fully expand the strings:

```
10303 \begingroup%
10304 \LWR@FBcancel%
10305 \fullexpandarg%
```

The &, <, and > may be interpreted by the browser:

```
10306 \protect\StrSubstitute{\detokenize{\#1}}%
10307 {\detokenize{\&}}{\detokenize{\&}}[\LWR@strresult]%
10308 \protect\StrSubstitute{\detokenize\expandafter{\LWR@strresult}}%
10309 {\detokenize{<}}{\detokenize{<}}[\LWR@strresult]%
10310 \protect\StrSubstitute{\detokenize\expandafter{\LWR@strresult}}%
10311 {\detokenize{>}}{\detokenize{>}}[\LWR@strresult]%
```

The double quote occasionally causes problems.

```
10312 \protect\StrSubstitute{\detokenize\expandafter{\LWR@strresult}}%
10313 {\detokenize{"}}{\detokenize{"}}[\LWR@strresult]%
```

MathJax allows expressions to be defined with `\newcommand`. These expressions would appear with ## for each argument, and each must be changed to a single #. This must be done after all the above changes. Attempting another conversion after this causes an error upon further expansion.

```
10314 \protect\StrSubstitute{\detokenize\expandafter{\LWR@strresult}}%
10315 {\detokenize{##}}{\LWR@origpound}[\LWR@strresult]%
10316 \LWR@strresult%
10317 \endgroup%
10318 }
```

```
\LWR@HTMLsanitizeexpand {<text>}
```

This version expands the argument before sanitizing it.

```
10319 \newrobustcmd{\LWR@HTMLsanitizeexpand}[1]{%
```

Cancel French **babel** character handling, and fully expand the strings:

```
10320 \begingroup%
10321 \LWR@FBcancel%
10322 \fullexpandarg%
```

The difference between this and `\LWR@HTMLsanitize` (without “expand”) is the following `\expandafter`:

```
10323 \protect\StrSubstitute{\detokenize\expandafter{\#1}}%
10324 {\detokenize{&}}{\detokenize{&}}[\LWR@strresult]%

10325 \protect\StrSubstitute{\detokenize\expandafter{\LWR@strresult}}%
10326 {\detokenize{<}}{\detokenize{<}}[\LWR@strresult]%

10327 \protect\StrSubstitute{\detokenize\expandafter{\LWR@strresult}}%
10328 {\detokenize{>}}{\detokenize{>}}[\LWR@strresult]%

10329 \protect\StrSubstitute{\detokenize\expandafter{\LWR@strresult}}%
10330 {\detokenize{"}}{\detokenize{"}}[\LWR@strresult]%
```

`\LWR@HTMLsanitizeexpand` is not used for defining new MathJax macros, so the `##` conversion is not needed here.

```
10331 \LWR@strresult%
10332 \endgroup%
10333 }
```

80.5 Equation numbers

Ctr LWR@startingequation For use with `lateximage` and multi-line numbered equations. Remembers the next equation number so that it may be printed in the alt tag.

```
10334 \newcounter{LWR@startingequation}
10335
10336 \@ifundefined{chapter}
10337 {
10338 \renewcommand{\theLWR@startingequation}{%
10339 \arabic{LWR@startingequation}%
10340 }
10341 }
10342 {% chapter defined
10343 \renewcommand{\theLWR@startingequation}{%
10344 \ifnumcomp{\value{chapter}}{>}{0}{\arabic{chapter}.}{}%
10345 \arabic{LWR@startingequation}%
10346 }
```

```
10346 }
10347 }
```

`Bool LWR@isstartingequation` True for the first equation tag, false for later tags in the same environment.

```
10348 \newbool{LWR@isstartingequation}
```

`\LWR@startingequationtag` Prints the starting equation number or tag.

```
10349 \let\theLWR@startingequationtag\theLWR@startingequation
```

`\LWR@equationtag` Prints the ending equation number or tag.

This is reset by `\teximage`, may be temporarily overwritten by `\tag` calling `\LWR@remembertag`.

```
10350 \newcommand*{\LWR@equationtag}{}%
```

Only if SVG math, patch `\tag` after packages have loaded, in case someone else modified `\tag`.

```
10351 \AtBeginDocument{
10352
10353 \ifbool{mathjax}{}{%
  \patchcmd{\tag}{\LWR@equationtag}{\LWR@remembertag}{}{}}%
```

`\LWR@remembertag {<tag>}`

For use inside the math environments while using SVG math. Sets `\theLWR@startingequation` and `\theequation` to the given tag.

```
10354 \NewDocumentCommand{\LWR@remembertag}{m}{%
  10355 \ifbool{LWR@isstartingequation}{%
    10356 {%
      10357   \global\booleventh{\LWR@isstartingequation}%
      10358   \xdef\theLWR@startingequationtag{\#1}%
    }%
  }%
  10359 }%
  10360 \xdef\theequationtag{\#1}%
  10361 }%
  10362 }%
  10363 }% AtBeginDocument
```

80.6 HTML alt tags

`\LWR@amsmathbody {<envname>}` For use inside the optional argument to a `\teximage` to add the contents of a AMS math environment to the `<alt>` tag.

```
10364 \newcommand*{\LWR@amsmathbody}[1]{%
  10365 {%
    10366 \textbackslash\begin{#1}\textbackslash\end{#1} % extra space
```

```

10367 \LWR@HTMLsanitizeexpand{\detokenize\expandafter{\the\@envbody}}%
10368 \textbackslash\{end\}\{\#1\}%
10369 }

```

\LWR@amsmathbodynumbered {*envname*} For use inside the optional argument to a `lateximage` to add the contents of a AMS math environment to the alt tag, prefixed by the equation numbers.

```

10370 \newcommand*\LWR@amsmathbodynumbered[1]%
10371 {%
10372 \ifnumcomp{\value{\LWR@startingequation}}{=}{\value{equation}}{%
10373 {(\LWR@equationtag)}%
10374 {(\LWR@startingequationtag--\LWR@equationtag)} % extra space
10375 \LWR@amsmathbody{\#1} % extra space
10376 }

```

80.7 `lateximage` environment

\LWR@lateximage@oneimageb {*1: alt text*} {*2: filename*} {*3: CSS style*} Creates the image for the `lateximage`.

```

10377 \newcommand{\LWR@lateximage@oneimageb}[3]{%
10378     \LWR@subinlineimage{\#1}{\textrm{lateximage}}{%
10379         {%
10380             \LWR@print@mbox{%
10381                 \LWR@ImagesDirectory\OSPathSymbol%
10382                 \#2%
10383             }%
10384             \{svg\}{\#3}%
10385 }

```

\LWR@lateximage@oneimage {*1: alt text*} {*2: filename*} {*3: css style*} {*4: delimit?*}

Creates an image for the `lateximage`, whose alt text depends on the circumstances.

```

10386 \newcommand{\LWR@lateximage@oneimage}[4]{%
10387     \ifdefvoid{\LWR@ThisAltText}{%
10388         \IfBooleanTF{\#4}{%
10389             \LWR@lateximage@oneimageb{\#1}{\#2}{\#3}%
10390         }{%
10391             \LWR@lateximage@oneimageb{%
10392                 {\AltTextOpen\#1\AltTextClose}%
10393                 \{#2\}{\#3}%
10394             }%
10395         }{%
10396             \LWR@lateximage@oneimageb{%
10397                 {\AltTextOpen\LWR@ThisAltText\AltTextClose}%
10398                 \{#2\}{\#3}%
10399             }%
10400 }

```

Env `lateximage` * [*2: <alt> tag*] * [*4: add'l hashing*] [*5: css style*]

Typesets the contents and then renders the result as an SVG file. Star #1 causes the image to be hashed for reuse. Star #3 causes the alt tag to not include \AltTextOpen and \AltTextClose, for use with math expressions.

The optional <alt> tag is included in the HTML code for use with copy/paste.

image filename hashing

If starred, a hashed filename is used. If so, the hash is based on the alt tag and also the additional hashing argument.

This may be used to provide an expression with a simple alt tag but also enough additional information to provide a unique hash.

An example is when the expression is a complicated TEX expression, which would not copy/paste well. A simplified tag may be used, while the complicated expression is duplicated in the additional hashing argument.

Another example is when the expression is simple, but the image depends on options. These options may be decoded into text form and included in the additional hashing argument in order to make the hash unique according to the set of options, even if the simple alt tag is still the same.

File *_html.aux A new label is placed into the file *_html.aux:

```
\newlabel{LWR@lateximage-<BaseJobname>-<number>}{{<x>}{<y>}}
```

This is used to find the image in the PDF file, according to its name.

File **-images.txt

A list of images to generate is created in <jobname>-images.txt. Each line has three pipe-delimited fields, containing the PDF page number from <jobname>_html.pdf, where the image is located, a boolean indicating whether the image is hashed, and the filename of the image. The last line has “end” in each field, and is used to detect an incomplete compile.

```
10401 \catcode`\$=\active%
10402
10403 \NewDocumentEnvironment{lateximage}{s 0{\ImageAltText} s 0{} 0{}}
10404 {%
10405 \LWR@traceinfo{lateximage: starting on \jobname.pdf page \arabic{page}}%
10406 \LWR@traceinfo{lateximage: entering depth is \arabic{\LWR@lateximagedepth}}%
```

Nested lateximages remain one large lateximage:

```
10407 \ifnumcomp{\value{\LWR@lateximagedepth}}{>}{0}{}
```

If nesting inside an already-existing lateximage, simply record one more level. *AMS* packages redefine \addtocounter to do nothing if inside a \text, so lower-level TEX macros are used for tracking nested lateximages.

```
10408 {%
10409 %      \addtocounter{\LWR@lateximagedepth}{1}%
10410      \global\advance\c@LWR@lateximagedepth 1\relax% Due to AmS \text macro.
10411 }%
```

Otherwise, this is the outer-most lateximage:

```
10412 { % start of outer-most lateximage
```

Remember the next equation number to be allocated, in case it must be printed in a multi-equation environment:

```
10413 \LWR@traceinfo{lateximage: starting outer-most lateximage}%
10414   \setcounter{LWR@startingequation}{\value{equation}}%
10415   \addtocounter{LWR@startingequation}{1}%
10416   \booltrue{LWR@isstartingequation}%
10417   \let\LWR@startingequationtag\theLWR@startingequation%
```

The default equation tag, unless overwritten by \tag:

```
10418   \let\LWR@equationtag\theequation%
```

Starting a new lateximage:

```
10419   \addtocounter{LWR@lateximagenumber}{1}%
10420   \LWR@traceinfo{lateximage: LWR@lateximagenumber is \arabic{LWR@lateximagenumber}}%
```

While inside a lateximage, locally do not use mathjax:

```
10421   \boolfalse{mathjax}%
```

Be sure that are doing a paragraph:

```
10422   \LWR@ensuredoingapar%
```

Next file:

```
10423   \addtocounter{LWR@externalfilecnt}{1}%
10424   \LWR@traceinfo{lateximage: LWR@externalfilecnt is \arabic{LWR@externalfilecnt}}%
```

Figure out what the next page number will be. \setcounterpageref assigns LWR@LIpage to the page number for the reference LWR@lateximage-BaseJobname-XXX:

```
10425   \setcounterpageref{LWR@LIpage}{%
10426     LWR@lateximage-\BaseJobname-\arabic{LWR@lateximagenumber}}%
10427   }%
10428   \LWR@traceinfo{lateximage: LWR@LIpage is \arabic{LWR@LIpage}}%
```

Create an HTML span which will hold the comment which contains the *pdftotext* translation of the image's page, and also will hold the link to the .svg file:

```
10429   \LWR@htmlltag{span\LWR@indentHTML%
10430     id="lateximage-\BaseJobname-\arabic{LWR@lateximagenumber}"\LWR@indentHTML
10431       class="lateximagesource"\LWR@orignewline
10432     }%
```

Write instructions to the <ImagesDirectory>.txt file:

```

10433 \LWR@traceinfo{lateximage: about to write to \BaseJobname-images.txt}%
10434 \IfBooleanTF{#1}{%
10435   {%

```

Compute and save the hashed file name for later use:

```

10436   \ifdefvoid{\LWR@ThisAltText}{%
10437     \IfBooleanTF{#3}{%
10438       \edef\LWR@hashedname{%
10439         \LWR@mdfive{\detokenize\expandafter{#2}-!-#4}%
10440       }%
10441     }{%
10442       \edef\LWR@hashedname{%
10443         \LWR@mdfive{\detokenize\expandafter{\AltTextOpen#2\AltTextClose}-!-#4}%
10444       }%
10445     }%
10446   }{%
10447     \edef\LWR@hashedname{%
10448       \LWR@mdfive{\detokenize\expandafter{\AltTextOpen\LWR@ThisAltText\AltTextClose}-!-#4}%
10449     }%
10450   }%
10451   \LWR@traceinfo{lateximage: hash is \LWR@hashedname}%

```

Write the page, hashing, and hashed name:

```

10452   \immediate\write\LWR@lateximagesfile{%
10453     |\arabic{\LWR@LIPage}|true| \LWR@hashedname|%
10454   }%
10455 }% hash
10456 {%

```

No hash, so write the page, no hashing, and the image number:

```

10457   \LWR@traceinfo{lateximage: hash false}%
10458   \immediate\write\LWR@lateximagesfile{%
10459     |\arabic{\LWR@LIPage}|false| \LWR@ImagesName\arabic{\LWR@externalfilecnt}|%
10460   }%
10461 }% no hash

```

Place an open comment tag. This will hide any traces of the lateximage PDF page which were picked up by *pdftotext*.

```

10462 \LWR@traceinfo{lateximage: about to create open comment}%
10463 \LWR@htmlopencomment%

```

One level deeper. At this outer-most lateximage, it is known that this is not being used inside an *$\mathcal{M}\mathcal{S}$* \text, since the outer-most level will never be in math mode.

```

10464 \addtocounter{\LWR@lateximagedepth}{1}%

```

Start the new PDF page:

```

10465 \LWR@traceinfo{lateximage: about to create a new page}%
10466 \LWR@orignewpage%

```

Typeset the image in a “standard” width page and font size:

```
10467 \LWR@traceinfo{lateximage: about to create minipage}%
10468 \LWR@print@minipage{6in}%
10469 \nameuse{\LWR@print@\LateximageFontSizeName}%
```

Temporarily restore formatting to its PDF definitions: Do not produce HTML tags for `\hspace`, etc. inside a `lateximage`.

```
10470 \LWR@traceinfo{lateximage: about to temporarily restore formatting}%
10471 \LWR@restoreorigformatting%
```

Use full-page footnotes instead of `minipage` footnotes. These become HTML footnotes.

```
10472 \def\@mpfn{footnote}%
10473 \def\thempfn{\thefootnote}%
10474 \LetLtxMacro\@footnotetext{\LWR@footnotetext}%
```

Create the `\LWR@lateximage<number>` label:

```
10475 \LWR@traceinfo{lateximage: about to create label}%
10476 \LWR@orig@label{\LWR@lateximage-\BaseJobname-\arabic{\LWR@lateximagenumber}}%
10477 \LWR@traceinfo{lateximage: finished creating the label}%
```

Enable print-mode math functions:

```
10478 \LetLtxMacro$\LWR@origdollar%
10479 \catcode`\$=3% math shift
10480 \LetLtxMacro\(\LWR@origopenparen%
10481 \LetLtxMacro\)\LWR@origcloseparen%
```

Only enable print-mode display math if are not already inside display math:

```
10482 \ifbool{\LWR@indisplaymathimage}{}{%
10483   \LetLtxMacro[\LWR@origopenbracket%
10484   \LetLtxMacro\]\LWR@origclosebracket%
10485   \let\equation\LWR@origequation%
10486   \let\endequation\LWR@origendequation%
10487   \csletcs{equation*}{\LWR@origequation*}%
10488   \csletcs{endequation*}{\LWR@origendequation*}%
10489 }% not in display math
```

For `chemformula`:

```
10490 \LetLtxMacro\newsingle$%
10491 \LetLtxMacro\newsingle$% syntax highlighting
10492 }% end of outer-most lateximage
10493 \LWR@traceinfo{lateximage: finished start of environment}%
10494 }% end of \begin{lateximage}
```

`\end{lateximage}` When the environment closes:

```
10495 {%
  start of \end{lateximage}
10496 \LWR@traceinfo{lateximage: starting end of lateximage}%
```

Nested more than one deep?

```
10497 \LWR@traceinfo{lateximage: internal depth was \arabic{LWR@lateximagedepth}}%
10498 \ifnumcomp{\value{LWR@lateximagedepth}}{>}{1}{}
```

If nesting inside an already existing lateximage, simply record one less level. Uses a lower-level *TEX* macro due to *AMS* \text change of \addtocounter.

```
10499 {%
10500   \LWR@traceinfo{lateximage: unnesting}%
10501   \global\advance\c@LWR@lateximagedepth -1\relax%
10502 }%
```

If this is the outer-most lateximage:

```
10503 {%
  end of outer-most lateximage
```

Finish the lateximage minipage and start a new PDF page:

```
10504 \LWR@traceinfo{lateximage: ending outer-most lateximage}%
10505   \endLWR@print@minipage%
10506   \LWR@orignewpage%
```

Close the HTML comment which encapsulated any traces of the lateximage picked up by *pdftotext*:

```
10507   \LWR@print@vspace*{.5\baselineskip}%
10508   \LWR@htmlclosecomment%
10509   \LWR@traceinfo{lateximage: The page after the image is \arabic{page}}%
```

Create a link to the lateximage, allowing its natural height:

```
10510   \IfBooleanTF{#1}{%
10511     starred
10512     \LWR@lateximage@oneimage{#2}{\LWR@hashedname}{#5}{#3}%
10513   }{%
10514     hash
10515     \LWR@lateximage@oneimage{#2}{\LWR@ImagesName\theLWR@externalfilecnt}{#5}{#3}%
10516   }{%
     no hash
   }
```

Be sure that are doing a paragraph:

```
10517   \LWR@ensuredoingapar%
```

Close the HTML span which has the *pdftotext* comment and also the link to the .svg image:

```
10518   \LWR@htmlltag{/span}%
10519   \ifbool{HTMLDebugComments}{%
10520     \LWR@htmlcomment{End of lateximage}%
10521   }{}
```

Undo one lateximage level. This is not inside an \mathcal{MS} \text, so regular \addtocounter may be used here.

```
10522     \addtocounter{LWR@lateximagedepth}{-1}%
```

Clear the single-use alt text:

```
10523     \gdef\LWR@ThisAltText{}%
10524 }% end of outer-most lateximage
10525 \LWR@traceinfo{lateximage: exiting depth is \arabic{LWR@lateximagedepth}}%
10526 \LWR@traceinfo{lateximage: done}%
10527 }%
10528 \catcode`\$=3% math shift
10529 \end{warpHTML}
```

for PRINT output: 10530 \begin{warpprint}

Env lateximage * [<alt> tag] * [<add'l hashing>] [<css style>]

varwidth is used to create a box of the natural width of its contents.

```
10531 \NewDocumentEnvironment{lateximage}{s o s o}
10532     {\begin{varwidth}[b]{\linewidth}}
10533     {\end{varwidth}}
10534 \end{warpprint}
```

81 center, flushleft, flushright

for HTML output: 10535 \begin{warpHTML}

Env center Replace center functionality with css tags:

```
10536 \renewenvironment*{center}
10537 {
10538 \LWR@forcenewpage
10539 \ifbool{FormatWP}
10540 {\BlockClass[\LWR@print@mbox{text-align:center}]{center}}
10541 {\BlockClass{center}}
10542 }
10543 {\endBlockClass}
```

Env flushright

```
10544 \renewenvironment*{flushright}
10545 {
10546 \LWR@forcenewpage
10547 \ifbool{FormatWP}
10548 {\BlockClass[\LWR@print@mbox{text-align:right}]{flushright}}
```

```
10549 {\BlockClass{flushright}}
10550 }
10551 {\endBlockClass}
```

Env flushleft

```
10552 \renewenvironment*{flushleft}
10553 {
10554 \LWR@forcenewpage
10555 \ifbool{FormatWP}{%
10556 {\BlockClass[\LWR@print@mbox{text-align:left}]{flushleft}}%
10557 {\BlockClass{flushleft}}%
10558 }%
10559 {\endBlockClass}}
```

\centering, \raggedleft, and \raggedright usually have no effect on the HTML output, but they may be used to compare with the next token to identify their use at the start of a float. See \LWR@floatalignment.

\centering

```
10560 \newcommand*{\LWR@HTML@centering}{%
10561 \ifbool{HTMLDebugComments}{%
10562     \LWR@htmlcomment{centering}}%
10563 }{%
10564 }%
10565 \LWR@formatted{centering}
```

\raggedleft

```
10566 \newcommand*{\LWR@HTML@raggedleft}{%
10567 \ifbool{HTMLDebugComments}{%
10568     \LWR@htmlcomment{raggedleft}}%
10569 }{%
10570 }%
10571 \LWR@formatted{raggedleft}
```

\raggedright

```
10572 \newcommand*{\LWR@HTML@raggedright}{%
10573 \ifbool{HTMLDebugComments}{%
10574     \LWR@htmlcomment{raggedright}}%
10575 }{%
10576 }%
10577 \LWR@formatted{raggedright}
```

\leftline {<text>}

```
10578 \renewcommand{\leftline}[1]{\begin{flushleft}#1\end{flushleft}}
```

```
\centerline {\langle text\rangle}

10579 \renewcommand{\centerline}[1]{\begin{center}\#1\end{center}>

\rightline {\langle text\rangle}

10580 \renewcommand{\rightline}[1]{\begin{flushright}\#1\end{flushright}>

10581 \end{warpHTML}
```

82 Preloaded packages

for HTML output: 10582 \begin{warpHTML}

If the given package was loaded before or by l warp, load the l warp version as well.

```
\LWR@PreloadedPackage {\langle packagename\rangle}

10583 \newcommand*{\LWR@PreloadedPackage}[1]{%
10584     \@ifpackageloaded{\#1}{%
10585         {%
10586             \AtBeginDocument{%
10587                 \LWR@origRequirePackage{l warp-\#1}%
10588             }%
10589         }%
10590     {%
10591 }}
```

If `inputrc` was loaded before l warp, as is usually done, explicitly load the l warp patches now:

```
10592 \LWR@PreloadedPackage{inputrc}
```

If `textcomp` was loaded before l warp, perhaps as part of the font-related packages, explicitly load the l warp patches now:

```
10593 \LWR@PreloadedPackage{textcomp}
```

If `xunicode` was loaded before l warp, perhaps as part of the font-related packages, explicitly load the l warp patches now:

```
10594 \LWR@PreloadedPackage{xunicode}
```

If `graphics` or `graphicx` were loaded before l warp, perhaps by `xunicode`, explicitly load the l warp patches now:

```
10595 \LWR@PreloadedPackage{graphics}
10596 \LWR@PreloadedPackage{graphicx}
```

`fontaxes` must be preloaded so that `l warp` may patch it for HTML.

10597 \LWR@PreloadedPackage{fontaxes}

`nfssext-cfr` may be preloaded by `cfm-lm` or related font packages.

10598 \LWR@PreloadedPackage{nfssext-cfr}

`ulem` may be preloaded by `ctex`, `cTEXart`, and related classes.

10599 \LWR@PreloadedPackage{ulem}

`xetexko-vertical` may be preloaded by `xetexko`.

10600 \LWR@PreloadedPackage{xetexko-vertical}

`geometry` is preloaded by `l warp`, and perhaps by various classes.

10601 \LWR@PreloadedPackage{geometry}

`plexit` is preloaded by some CJK classes.

10602 \LWR@PreloadedPackage{plexit}

`stfloats` is preloaded by `ltj*` classes.

10603 \LWR@PreloadedPackage{stfloats}

`lltjext` is preloaded by `ltj*` classes.

10604 \LWR@PreloadedPackage{lltjext}

10605 \end{warpHTML}

83 siunitx

Pkg `siunitx` The `l warp` core passes a few options to `siunitx`.

`fractions` Due to `pdftotext` limitations, fraction output is replaced by symbol output for per-mode and quotient-mode.

⚠ `math mode required` Some units will require that the expression be placed inside math mode.

NOTE: As of this writing, the `siunitx` extension for MATHJAX is not currently hosted at any public CDN, thus `siunitx` is not usable with MATHJAX unless a local copy of this extension is created first. See \MathJaxFilename to select a custom MathJax script.

⚠ `tabular` Tabular S columns are rendered as simple c columns, and tabular s columns are not supported. These may be replaced by c columns with each cell contained in `\num` or `\si`.

for HTML output: 10606 \begin{warpHTML}

Options for siunitx:

```

10607 \newrobustcmd{\LWR@siunitx@textcelsius}{\HTMLentity{deg}C}
10608 \newrobustcmd{\LWR@siunitx@textdegree}{\HTMLentity{deg}}
10609 \newrobustcmd{\LWR@siunitx@textprime}{\HTMLunicode{2032}}
10610 \newrobustcmd{\LWR@siunitx@textdblprime}{\HTMLunicode{2033}}
10611 \newrobustcmd{\LWR@siunitx@textplanckbar}{\text{\textit{\HTMLunicode{0127}}}}}
10612
10613 \appto{\LWR@restoreorigformatting}{%
10614 \renewrobustcmd{\LWR@siunitx@textcelsius}{\text{\ensuremath{^\circ}C}}%
10615 \renewrobustcmd{\LWR@siunitx@textdegree}{\text{\ensuremath{^\circ}}}%
10616 \renewrobustcmd{\LWR@siunitx@textprime}{\text{\ensuremath{'}}}%
10617 \renewrobustcmd{\LWR@siunitx@textdblprime}{\text{\ensuremath{''}}}}%
10618 \renewrobustcmd{\LWR@siunitx@textplanckbar}{\text{\ensuremath{\hbar}}}%
10619 }
10620
10621 \PassOptionsToPackage{%
10622   detect-mode=true,
10623   per-mode=symbol,% fraction is not seen by pdftotext
10624   text-celsius = {\LWR@siunitx@textcelsius},
10625   text-degree = {\LWR@siunitx@textdegree},
10626   text-arcminute = {\LWR@siunitx@textprime},
10627   text-arcsecond = {\LWR@siunitx@textdblprime},
10628 }{siunitx}
10629 \end{warpHTML}

```

84 Graphics print-mode modifications

84.1 General limitations

 **scale** Avoid using the `\includegraphics scale` option. Change:

```
\includegraphics[scale=<xx>]{...}
```

to:

```
\includegraphics[width=<yy>\linewidth]{...}
```

\includegraphics file formats For `\includegraphics` with .pdf or .eps files, the user must provide a .pdf or .eps image file for use in print mode, and also a .svg, .png, or .jpg version of the same image for use in HTML.

```
\includegraphics{filename} % print:.pdf/.eps HTML:.svg, etc.
```

For print output, lwarf will automatically choose the .pdf or .eps format if available, or some other format otherwise. For HTML, one of the other formats is used instead.

If a .pdf or .eps image is referred to with its file extension, the extension will be changed to .svg for HTML:

```
\includegraphics{filename.pdf} % uses .svg in html
\includegraphics{filename.eps} % uses .svg in html
```

Prog pdftocairo To convert a PDF image to SVG, use the utility *pdftocairo*:

PDF to SVG

Enter ⇒ **pdftocairo -svg filename.pdf**

Prog lwarpmk pdftosvg For a large number of images, use *lwarpmk*:

Enter ⇒ **lwarpmk pdftosvg *.pdf (or a list of filenames)**

Prog lwarpmk epstopdf For EPS images converted to PDF using the package *epstopdf*, use

**Prog epstopdf
epstopdf package**

Enter ⇒ **lwarpmk pdftosvg *.PDF**

to convert to SVG images.

DVI latex When using DVI *latex*, it is necessary to convert EPS to PDF and then to SVG:

Enter ⇒ **lwarpmk epstopdf *.eps (or a list of filenames)**

Enter ⇒ **lwarpmk pdftosvg *.pdf (or a list of filenames)**

PNG and JPG

For PNG or JPG while using *pdflatex*, *lualatex*, or *xelatex*, the same file may be used in both print or HTML versions, and may be used with a file extension, but will also be used without the file extension if it is the only file of its base name.

GIF

GIF files may be used for HTML, but another format must also be provided for print output.

file extension priorities

If a file extension is not used, for HTML the file extension priorities are: SVG, GIF, PNG, then JPG.

⚠ graphics vs. graphicx

⚠ viewport

⚠ viewport units

If using the older *graphics* syntax, use both optional arguments for *\includegraphics*. A single optional parameter is interpreted as the newer *graphicx* syntax. Note that viewports are not supported by *lwarf*—the entire image will be shown.

For *\includegraphics*, avoid px and % units for width and height, or enclose them inside *warpHTML* environments. For font-proportional image sizes, use ex or em. For fixed-sized images, use cm, mm, in, pt, or pc. Use the keys width=.5\linewidth, or similar for *\textwidth* or *\textheight* to give fixed-sized images proportional to a 6 by 9 inch text area. Do not use the scale option, since it is not well supported by HTML browsers.

options

\includegraphics accepts width and height, origin, rotate and scale, plus new class and alt keys.

HTML class

With HTML output, *\includegraphics* accepts an optional class=xyz keyval combination, and if this is given then the HTML output will include that class for the image. The class is ignored for print output.

HTML alt tags

Likewise, the *\includegraphics* alt key adds an HTML alt tag to an image, and is ignored for print output. If not assigned, each image is given an alt tag according to *\ImageAltText*.

\rotatebox \rotatebox accepts the optional origin key.

-  **browser support** \rotatebox, \scalebox, and \reflectbox depend on modern browser support. The css3 standard declares that when an object is transformed the whitespace which they occupied is preserved, unlike L^AT_EX, so expect some ugly results for scaling and rotating.

84.2 Print-mode modifications

for PRINT output: For print output, accept and then discard the new class key:

```
10630 \begin{warpprint}
10631 \define@key{Gin}{class}{}
10632 \define@key{Gin}{alt}{}
```

Print-mode additions for the overpic package. See section 362 for the HTML version.

```
10633 \AtBeginDocument{
10634 \@ifpackageloaded{overpic}{
10635 \newcommand*\overpicfontsize}{12}
10636 \newcommand*\overpicfontskip}{14}
10637 }{ }
10638 }
10639 \end{warpprint}
```

85 xcolor boxes

Pkg xcolor A few new definitions are provided for enhanced HTML colored boxes, and \fcolorbox is slightly modified. Print-mode version are also provided.

Print-mode versions of new xcolor defintions. These are defined inside warpall because they are also used for HTML while inside a lateximage. They are defined \AtBeginDocument so that the xcolor originals may first be loaded and saved for reuse.

The framed versions are modified to allow a background color of none, in which case only the frame is drawn, allowing the background page color to show.

for HTML & PRINT: 10640 \begin{warpall}

After xparse may have been loaded ...

```
10641 \AtBeginDocument{
...
... and only if xcolor was loaded:
10642 \@ifpackageloaded{xcolor}{

10643 \LWR@traceinfo{patching xcolor}
```

The print version:

\colorboxBlock \colorboxBlock is the same as \colorbox:

10644 \LetLtxMacro\colorboxBlock\colorbox

The original definition is reused by the new versions:

10645 \LetLtxMacro\LWR@orig@print@fcolorbox\fcolorbox

\fcolorbox [*framemode*] {[*framecolor*] [*boxmodel*] {[*boxcolor*] {[*text*]}}}

In print mode, \fcolorbox is modified to accept a background color of none.

(\fcolorbox is particular about its optional arguments, thus the elaborate combinations of \ifthenelse.)

```
10646 \newsavebox{\LWR@colorminipagebox}
10647
10648 \NewDocumentCommand{\LWR@print@fcolorbox}{o m o m +m}{%
10649 \LWR@traceinfo{\LWR@print@fcolorbox #2 #4}%

```

Pre-load the contents into an LR box so that they can be used inside a \fcolorbox:

```
10650 \begin{lrbox}{\LWR@colorminipagebox}%
10651 #5%
10652 \end{lrbox}%

```

Sort out the various optional arguments and the background color of none. In each case, the LRbox is placed inside a \fcolorbox.

The current color is remembered, then set to the frame, then the current color is used for the contents.

```
10653 \ifstreq{\#4}{none}%
10654 {%
10655   \LWR@traceinfo{background is none}%
10656   {%
10657     \colorlet{\LWR@currentcolor}{.}%
10658     \color{\#2}%
10659     \fbox{%
10660       \color{\LWR@currentcolor}%
10661       \usebox{\LWR@colorminipagebox}%
10662     }%
10663   }%
10664 }%
10665 {%
10666 \LWR@traceinfo{background not none}%
10667 \IfValueTF{\#1}%
10668 {%
10669   \IfValueTF{\#3}%
10670   {\LWR@orig@print@fcolorbox[\#1]{\#2}{\#3}{\#4}{\usebox{\LWR@colorminipagebox}}}%
10671   {\LWR@orig@print@fcolorbox[\#1]{\#2}{\#4}{\usebox{\LWR@colorminipagebox}}}%
10672 }%
10673 {%
10674   \IfValueTF{\#3}%

```

```

10675      {\LWR@orig@print@fcolorbox{#2}{#3}{#4}{\usebox{\LWR@colorminipagebox}}}}%
10676      {\LWR@orig@print@fcolorbox{#2}{#4}{\usebox{\LWR@colorminipagebox}}}}}%
10677 }% no value #1
10678 }% #4 not none
10679 \LWR@traceinfo{\LWR@print@fcolorbox done}%
10680 }
10681
10682 \renewcommand*{\fcolorbox}{\LWR@print@fcolorbox}

```

\fcolorboxBlock [*framemode*] [*framecolor*] [*boxmodel*] [*boxcolor*] [*text*]

In print mode, \fcolorboxBlock is the same as \fcolorbox.

```

10683 \newcommand*{\LWR@print@fcolorboxBlock}{\LWR@print@fcolorbox}
10684 \newcommand*{\fcolorboxBlock}{\LWR@print@fcolorboxBlock}

```

Env fcolorminipage [*1:framemode*] [*2:framecolor*] [*3:boxmodel*] [*4:boxcolor*] [*5:align*] [*6:height*] [*7:inner-align*] [*8:width*]

In print mode, becomes a \fcolorbox containing a minipage:

```

10685 \NewDocumentEnvironment{\LWR@print@fcolorminipage}{o m o m O{c} O{} o m}
10686 {%
10687 \LWR@traceinfo{*** fcolorminipage: #2 #4 #8}%

```

Pre-load the contents into an LR box so that they can be used inside a \fcolorbox:

```
10688 \begin{lrbox}{\LWR@colorminipagebox}%
```

If inner alignment is not given, use the outer alignment instead:

```

10689 \IfValueTF{#7}{%
10690 {\begin{minipage}[#5][#6][#7]{#8}}{%
10691 {\begin{minipage}[#5][#6][#5]{#8}}{%
10692 }{%
10693 {%
10694 \end{minipage}}{%
10695 \end{lrbox}}{%

86 chemmacros environments

\makepolymerdelims and redox reactions must be enclosed in a `lateximage` during HTML output. These environments are provided here in print mode, and in the `chemmacros` code in HTML mode, as a high-level semantic syntax which automatically embeds the contents in a `lateximage` with an appropriate `alt` tag.

for PRINT output: 10731 \begin{warpprint}

```

10732 \AtBeginDocument{
10733 @ifpackageloaded{chemmacros}{}

```

Env polymerdelims

```

10734 \DeclareDocumentEnvironment{polymerdelims}{}{%
10735   {}{}}

```

Env redoxreaction {<space above>} {<space below>}

For print output, extra space is include above and below the image, and a `lateximage` is not necessary. This extra space must be enforced, even inside a float, so zero-width rules are used.

For the HTML version, see section 170.4.

```
10736 \DeclareDocumentEnvironment{redoxreaction}{m m}
10737     {\rule{0pt}{#1}}{\rule[-#2]{0pt}{#2}}
10738 }% chemmacros
10739 }% AtBeginDocument
10740 \end{warpprint}
```

87 cleveref

Pkg cleveref cleveref package is used as-is with minor patches.

- ⚠ cleveref page numbers cleveref and variorref are supported, but printed page numbers do not map to HTML, so a section name or a text phrase are used for \cpageref and \cpagerefrange. This phrase includes \cpagerefFor, which defaults to “for”.

Ex:

```
\cpageref{tab:first,tab:second}
in html becomes:
“pages for table 4.1 and for table 4.2”
```

See \cpagerefFor at page 546 to redefine the message which is printed for page number references.

- loading order cleveref and the following associated macro patches are automatically preloaded at the end of the preamble via \AtEndPreamble and \AfterEndPreamble. This is done because the HTML conversion requires cleveref. The user’s document may not require cleveref, thus the user may never explicitly load it, so during HTML output l warp loads it last. If the user’s document preamble uses cleveref options, or functions such as \crefname, then cleveref may be loaded in the user’s preamble near the end, and l warp’s additional loading of cleveref will have no effect.

Table 12 on page 466 shows the data structure of the label/reference system as revised by l warp and cleveref.

A few patches allow cleveref to work as-is:

for HTML output 10741 \begin{warppHTML}

\AtEndPreamble forces cleveref to be loaded last:

```
10742 \AtEndPreamble{
10743     \RequirePackage{cleveref}
10744 }
```

The following patches are applied after cleveref has loaded, and after \AtBeginDocument. Print-mode versions are not required since they all come down to \ref eventually, and \ref has a print-mode version.

```
10745 \AfterEndPreamble{
10746 \LWR@traceinfo{Patching cleveref.}
```

88 picture environment

Env picture The picture environment is enclosed inside a \latextimage.

for HTML output: 10842 \begin{warpHTML}

Env picture

```
10843 \BeforeBeginEnvironment{picture}{\begin{latextimage}[picture]}
10844
10845 \AfterEndEnvironment{picture}{\end{latextimage}}
10846 \end{warpHTML}
```

89 Minipages and Boxes

A css flexbox is used for minipages and parboxes, allowing external and internal vertical positioning.

⚠ **inline** A line of text with an inline minipage or \parbox will have the minipage or \parbox placed onto its own line, because a paragraph is a block element and cannot be made inline-block.

placement minipages and \parboxes will be placed side-by-side in HTML unless you place a \newline between them.

side-by-side Side-by-side minipages may be separated by \quad, \qquad, \enskip, \hspace, \hfill, or a \rule. When inside a center environment, the result is similar in print and HTML. Paragraph tags are suppressed between side-by-side minipages and these spacing commands, but not at the start or end of the paragraph.

⚠ **minipage in a span** There is limited support for minipages inside an HTML . An HTML <div> cannot appear inside a . While in a , minipages, and \parboxes, and any enclosed lists have limited HTML tags, resulting in an “inline” format, without markup except for HTML breaks. Use \newline or \par for an HTML break.

⚠ minipage size When using `\linewidth`, `\textwidth`, and `\textheight`, widths and heights in `HTML` are scaled proportionally to a 6×9 inch text area, and inside a `multicols` `\linewidth` is divided by the specified number of columns.

if width is \linewidth If a `minipage` or `\parbox` is assigned a width of exactly `\linewidth`, in `HTML` it is automatically given no `HTML` width, thus allowed to fill the line as needed, similar to how it appears in print output.

full-width if HTML A new macro `\minipagefullwidth` requests that, during `HTML` output, the next single `minipage` or `\parbox` be generated without an `HTML` width attribute, allowing it to be the full width of the display rather than the declared print-output width. This may be useful where the printed version's width makes no sense in `HTML`.

⚠ tabular, multicols Inside a `tabular` or `multicols` environment, where the width depends on the browser window, `\minipagefullwidth` is effectively used by default for every `minipage` or `\parbox` inside the environment. `\UseMinipageWidths` may be used to tell `lwarp` to honor the specified widths of all following `minipages` and `\parboxes` until the end of the local scope, and `\IgnoreMinipageWidths` may be used to tell `lwarp` to ignore the specified widths.

⚠ text alignment Nested `minipages` adopt their parent's text alignment in `HTML`, whereas in regular `LATEX PDF` output they do not. Use a `flushleft` or similar environment in the child `minipage` to force a text alignment.

for HTML output: 10847 `\begin{warpHTML}`

89.1 Counters and lengths

Ctr `\LWR@minipagedepth` Used to only reset the line width at the outermost `minipage`.

```
10848 \newcounter{\LWR@minipagedepth}
10849 \setcounter{\LWR@minipagedepth}{0}
```

Len `\LWR@minipagewidth` Used to convert the width into printable units.

```
10850 \newlength{\LWR@minipagewidth}
```

Len `\LWR@minipageheight` Used to convert the height into printable units.

```
10851 \newlength{\LWR@minipageheight}
```

89.2 Footnote handling

Also see section 59 for other forms of footnotes. `Minipage` footnotes are gathered in section 59.5, and then placed into the document in section 89.3.

89.3 Minipage handling

Bool `\LWR@minipagefullwidth` Should the next `minipage` have no `HTML` width?

```
10852 \newbool{LWR@minipagefullwidth}
10853 \boolefalse{LWR@minipagefullwidth}
```

Bool LWR@forceminipagefullwidth Should the next minipage have no HTML width? Used to force full width for all minipages in an environment such as tabular or multicols, where the actual width depends on the browser width. Controlled by \useminipagewidths and \ignoreminipagewidths.

```
10854 \newbool{LWR@forceminipagefullwidth}
10855 \boolefalse{LWR@forceminipagefullwidth}
```

\minipagefullwidth Requests that the next minipage have no width tag in HTML:

for HTML output: 10856 \newcommand*{\minipagefullwidth}{\global\booltrue{LWR@minipagefullwidth}}

\UseMinipageWidths Locally requests that minipage widths be honored.

```
10857 \newcommand*{\UseMinipageWidths}{\boolefalse{LWR@forceminipagefullwidth}}
```

\IgnoreMinipageWidths Locally requests that minipage widths be ignored.

```
10858 \newcommand*{\IgnoreMinipageWidths}{\booltrue{LWR@forceminipagefullwidth}}
10859 \end{warpHTML}
```

for PRINT output: 10860 \begin{warpprint}
 10861 \newcommand*{\minipagefullwidth}{}\\
 10862 \newcommand*{\UseMinipageWidths}{}\\
 10863 \newcommand*{\IgnoreMinipageWidths}{}\\
 10864 \end{warpprint}

for HTML output: 10865 \begin{warpHTML}

Bool LWR@minipagethispar Has a minipage been seen this paragraph? If true, prevents paragraph tags around horizontal space between minipages.

```
10866 \newbool{LWR@minipagethispar}
10867 \boolefalse{LWR@minipagethispar}
```

Env minipage [*vert position*] [*height*] [*inner vert position*] {*width*}

The vertical positions may be 'c', 't', or 'b'. The inner position may also be 's'.

When using \linewidth, \textwidth, or \textheight, these are scaled proportionally to a 6x9 inch text area.

```
10868 \NewDocumentEnvironment{LWR@HTML@sub@minipage}{m m m m}
10869 {%
10870 \LWR@traceinfo{minipage}}%
```

Temporarily open a group, in which width and height is computed based on a virtual page size instead of the extra-large PDF page used during HTML tag generation.

The following used to be an actual L^AT_EX minipage.

```
10871 \begingroup%
```

Compute width, adjusted for frames:

```
10872 \setlength{\LWR@minipagewidth}{#4}%
10873 \ifthenelse{\cnttest{\value{\LWR@minipagedepth}}{=}{0}}{%
```

Only create a new page if not yet nested:

```
10874 \LWR@orignewpage%
```

Adjust virtual page size:

```
10875 \addtolength{\LWR@minipagewidth}{3em}%
10876 \setlength{\linewidth}{6in}%
10877 \setlength{\textwidth}{6in}%
10878 \setlength{\textheight}{9in}%
10879 }{ }%
10880 \LWR@traceinfo{computed width is \printlength{\LWR@minipagewidth}}%
```

Compute height:

```
10881 \setlength{\LWR@minipageheight}{\textheight}%
10882 \ifblank{#2}{\setlength{\LWR@minipageheight}{#2}}%
```

Track nesting depth:

```
10883 \addtocounter{\LWR@minipagedepth}{1}%
```

L^AT_EX wants to start a paragraph for the virtual minipage, then start a paragraph again for the contents of the minipage, so cancel the paragraph tag handling until the minipage has begun.

```
10884 \ifbool{FormatWP}{\newline}{ }%
10885 \LWR@stopars%
```

If FormatWP, add a text frame:

```
10886 \ifbool{FormatWP}{%
10887
10888 \addtocounter{\LWR@thisautoidWP}{1}%
10889 \LWR@htmltag{%
10890   div id="\LWR@print@mbox{autoidWP-\arabic{\LWR@thisautoidWP}}" %
10891   class="wpminipage"%
10892 }%
10893
10894 }{ }%
```

Create the <div> tag with optional alignment style:

```

10895 \LWR@traceinfo{minipage: creating div class}%
10896 \LWR@htmntag{div class="minipage" style="%"
10897 \ifthenelse{\equal{\#1}{t}}{\LWR@print@mbox{vertical-align:bottom} ; }{}%
10898 \ifthenelse{\equal{\#1}{c}}{\LWR@print@mbox{vertical-align:middle} ; }{}%
10899 \ifthenelse{\equal{\#1}{b}}{\LWR@print@mbox{vertical-align:top} ; }{}%
10900 \ifthenelse{\equal{\#3}{t}}{\LWR@print@mbox{justify-content:flex-start} ; }{}%
10901 \ifthenelse{\equal{\#3}{c}}{\LWR@print@mbox{justify-content:center} ; }{}%
10902 \ifthenelse{\equal{\#3}{b}}{\LWR@print@mbox{justify-content:flex-end} ; }{}%
10903 \ifthenelse{\equal{\#3}{s}}{\LWR@print@mbox{justify-content:space-between} ; }{}%

```

Print the width and optional height styles:

```

10904 \LWR@traceinfo{minipage: about to print the width of \LWR@printlength{\LWR@minipagewidth}}%
10905 \ifbool{\LWR@minipagefullwidth}%
10906 {\global\boolfalse{\LWR@minipagefullwidth}}%
10907 {%
10908     \ifbool{\LWR@forceminipagefullwidth}%
10909         {}%
10910         {}%
10911         \ifdimequal{\#4}{\linewidth}%
10912             {}%
10913             \width:\LWR@printlength{\LWR@minipagewidth} ; }%
10914         {}%
10915 }%
10916 \LWR@traceinfo{minipage: about to print the height}%
10917 \ifblank{\#2}{}{height:\LWR@printlength{\LWR@minipageheight} ; }%
10918 "}%

```

Finish with an empty line to start the contents on a new line.

```

10919
10920 % The preceding empty line is required.

```

Set the user-accessible line and text width and height values inside the virtual minipage. These do not affect the actual size of the PDF output, but are used by any reference to \linewidth, etc. inside the virtual minipage being created here. \LWR@minipagewidth was the original then padded by 3em, which is restored here. This is done instead of settings back to #4, in case #4 was \linewidth, which was changed to 6in above.

```

10921 \setlength{\linewidth}{\LWR@minipagewidth} the padded width
10922 \addtolength{\linewidth}{-3em} the original width
10923 \setlength{\textwidth}{6in}%
10924 \setlength{\textheight}{9in}%

```

\raggedright cancels hyphenation, which will be done by HTML instead.

```
10925 \LWR@print@raggedright%
```

Set minipage footnotes:

```

10926 \def\@mpfn{\mpfootnote}%
10927 \def\thempfn{\thempfootnote}\c@mpfootnote\z@%

```

```
10928 \let\@footnotetext\@mpfootnotetext%
```

Resume paragraph tag handling for the contents of the minipage:

```
10929 \LWR@startpars%
10930 \ifboolexpr{bool{FormatWP} and bool{WPMarkMinipages}}{%
10931 === begin minipage ===
10933 }{%
10935 \LWR@traceinfo{minipage: finished starting the minipage}%
10936 }% finished \minipage
10937 { \% \endminipage
```

Print pending minipage footnotes:

```
10938 \LWR@printpendingmpfootnotes%
```

End the environment with closing tag:

```
10939 \ifboolexpr{bool{FormatWP} and bool{WPMarkMinipages}}{%
10940 === end minipage ===
10942 }{%
10944 \LWR@stopars%
```

The following used to be an actual L^AT_EX minipage.

```
10945 \endgroup%
10946
10947 \ifbool{FormatWP}{%
10948
10949 \LWR@htmlelementend{div}%
10950
10951 }{%
10952 \LWR@htmldivclassend{minipage}%
10953
10954 \addtocounter{\LWR@minipagedepth}{-1}%
10955 \LWR@startpars%
10956 \ifbool{FormatWP}{\newline}{}
```

Prevent paragraph tags around horizontal white space until the start of the next paragraph:

```
10957 \global\booltrue{\LWR@minipagethispar}%
10958 \LWR@traceinfo{\LWR@minipage: done}%
10959 }
10960
10961 \NewDocumentEnvironment{\LWR@HTML@minipage}{O{t} O{} O{t} m}
10962     {\LWR@HTML@sub@minipage{#1}{#2}{#3}{#4}}
10963     {\endLWR@HTML@sub@minipage}
10964
10965 \LWR@formattedeenv{minipage}
```

89.4 \parbox, \mbox, \makebox, \framebox, \fbox, \raisebox

for HTML output:

```
\parbox [⟨pos⟩] [⟨height⟩] [⟨inner-pos⟩] {⟨width⟩} {⟨text⟩}
```

A parbox uses the minipage code:

```
10966 \NewDocumentCommand{\LWR@HTML@parbox}{O{t} O{} O{t} m +m}
10967 {
10968 \LWR@traceinfo{parbox of width #4}%
10969 \begin{minipage}[#1][#2][#3]{#4}%
10970 #5
10971 \end{minipage}%
10972 }
10973
10974 \LWR@formatted{parbox}
```

\mbox {⟨text⟩} Nullified for HTML.

```
10975 \newcommand*{\LWR@HTML@mbox}[1]{#1}
10976
10977 \LWR@formatted{mbox}
```

\LWR@@makebox@paren {⟨width⟩} , {⟨height⟩}

Adds to the style in \LWR@temptwo.

```
10978 \NewDocumentCommand{\LWR@@makebox@paren}{m m}{%
10979 \IfValueTF{#2}{%

11034         }%
11035     }%
11036     \LWR@formatted{makebox}%

```

\framebox{ (<width,height>) [<width>] [<pos>] {<text>} }

```
11037 \NewDocumentCommand{\LWR@HTML@framebox}{d() o o +m}{%
11038     \fbox{\makebox[#1][#2][#3]{#4}}%
11039 }
11040
11041 \LWR@formatted{framebox}
```

\LWR@forceminwidth {*length*}

Sets \LWR@atleastonept to be at least 1pt.

```

11042 \newlength{\LWR@atleastonept}
11043
11044 \newcommand*{\LWR@forceminwidth}[1]{%
11045 \setlength{\LWR@atleastonept}{#1}%
11046 \ifthenelse{%
11047     \lengthtest{\LWR@atleastonept>0pt}\AND%
11048     \lengthtest{\LWR@atleastonept<1pt}%
11049 }{%
11050     \setlength{\LWR@atleastonept}{1pt}%
11051 }%
11052 }
```

\LWR@fboxstyle Prints the HTML attributes for a black border and padding.

\LWR@forceminwidth must be used first in order to set the border width.

```

11053 \newcommand*{\LWR@fboxstyle}{%
11054 \LWR@findcurrenttextcolor%
11055 border:\LWR@printlength{\LWR@atleastonept} solid \LWR@origpound\LWR@tempcolor ; %
11056 padding:\LWR@printlength{\fboxsep} ; %
11057 color:\LWR@origpound\LWR@tempcolor%
11058 }
```

\fbox {*text*}

Creates a framed inline span enclosing the text.

Create a new HTML version, but don't use it until after xcolor may have loaded:

```

11059 \newcommand{\LWR@HTML@fbox}[1]{%
11060 \LWR@traceinfo{HTML_fbox}%
11061 \LWR@forceminwidth{\fboxrule}%
11062 \InlineClass[%
11063     \LWR@print@mbox{display:inline-block} ; %
11064     \LWR@fboxstyle%
11065 ]{\fbox}{#1}%
11066 }
```

xcolor \lets things to \fbox when it is loaded, and this must remain even for HTML output while in a lateximage, so \fbox is not modified until \AtBeginDocument:

```
11067 \AtBeginDocument{\LWR@formatted{fbox}}
```

\fboxBlock {*text*} Creates a framed HTML <div> of the text.

First, a print-mode version. This is newly defined for print mode, so it is defined inside warpall.

for HTML & PRINT: 11068 \end{warpHTML}

```

11069 \begin{warpall}
11070 \let\fboxBlock\fbox
11071 \end{warpall}
11072
11073 \begin{warpHTML}
```

for HTML output: Next, an HTML version:

```

11074 \newcommand{\LWR@HTML\fboxBlock}[1]{%
11075 \LWR@forceminwidth{\fboxrule}%
11076 \LWR@stoppars%
11077 \begin{BlockClass}[%]
11078 \LWR@fboxstyle%
11079 ]{\fboxBlock}
11080 #1
11081 \end{BlockClass}
11082 \LWR@startpars%
11083 }
11084
11085 \LWR@formatted{\fboxBlock}
11086
11087 \end{warpHTML}
```

Env `fminipage` [*align*] [*height*] [*align*] {*width*}

Creates a framed HTML <div> around its contents.

for HTML & PRINT: Print version:

```

11088 \begin{warpall}
11089
11090 \newsavebox{\LWR@fminipagebox}
11091
11092 \NewDocumentEnvironment{\LWR@print@fminipage}{O{t} o O{t} m}
11093 {%
```

An outer minipage will be used for vertical alignment. An inner minipage will be framed with \fbox.

If the optional inner alignment is not given, use the outer instead:

```

11094 \IfValueTF{#3}%
11095 {\def\LWR@thisalign{#3}}
11096 {\def\LWR@thisalign{#1}}%
```

Form the outer minipage depending on whether a height was given. Make the outer minipage larger to compensate for the frame.

```

11097 \IfValueTF{#2}%
11098 {\minipage[#1][#2+2\fboxsep+2\fboxrule][\LWR@thisalign]{#4+2\fboxsep+2\fboxrule}}%
11099 {\minipage[#1]{#4+2\fboxsep+2\fboxrule}}%
```

Capture the contents of the environment:

```
11100 \begin{lrbox}{\LWR@fminipagebox}%
```

Nest the contents inside an inner minipage of the desired size:

```
11101 \IfValueT{#2}%
11102 {\minipage[#1][#2][\LWR@thisalign]{#4}}%
11103 {\minipage[#1]{#4}}%
11104 }%
11105 {%
```

Close the inner minipage and the LR box with the contents:

```
11106 \endminipage%
11107 \end{lrbox}%
```

Create a frame around the contents of the environment:

```
11108 \fbox{\usebox{\LWR@fminipagebox}}%
```

The entire thing is placed inside the outer minipage:

```
11109 \endminipage%
11110 }%
11111
11112 \LetLtxMacro\fminipage\LWR@print@fminipage
11113 \LetLtxMacro\endfminipage\endLWR@print@fminipage
11114 % \newenvironment{fminipage}{\LWR@print@fminipage}{\endLWR@print@fminipage}
11115
11116 \end{warpall}
```

HTML version:

```
for HTML output: 11117 \begin{warpHTML}
11118
11119 \NewDocumentEnvironment{\LWR@HTML@fminipage}{O{t} o O{t} m}
11120 {%
11121 \LWR@traceinfo{fminipage #1 #2 #3 #4}%
11122 \LWR@forceminwidth{\fboxrule}%
11123 \setlength{\LWR@tempwidth}{#4}%
11124 \IfValueT{#2}{\setlength{\LWR@tempheight}{#2}}%

11125 \LWR@stopars%

11126 \begin{BlockClass}[%
```

- 11127 \LWR@fboxstyle ; %
- 11128 \IfValueT{#2}{height:\LWR@printlength{\LWR@tempheight} ; }%
- 11129 \ifbool{\LWR@minipagefullwidth}{%
- 11130 {\global\boolfalse{\LWR@minipagefullwidth}}%
- 11131 {%
- 11132 \ifbool{\LWR@forceminipagefullwidth}{%
- 11133 {}%
- 11134 {}%
- 11135 \ifdimequal{\LWR@tempwidth}{\linewidth}{%
- 11136 {}%
- 11137 {width:\LWR@printlength{\LWR@tempwidth} ; }%
- 11138 }%

```

11139 }%
11140 ]{fminipage}%
11141 }
11142 {%
11143 \end{BlockClass}%

```

Prevent paragraph tags around horizontal white space until the start of the next paragraph:

```

11144 \global\booltrue{LWR@minipagethispar}%
11145 \LWR@traceinfo{fminipage done}%
11146 }
11147
11148 \LWR@formattedenv{fminipage}

\raisebox {⟨raiselen⟩} [⟨height⟩] [⟨depth⟩] {⟨text⟩}

11149 \NewDocumentCommand{\LWR@HTML@raisebox}{m o o m}{%
11150 #4%
11151 }
11152
11153 \LWR@formatted{raisebox}

11154 \end{warpHTML}

```

90 Direct formatting

⚠ **\bfseries, etc.** `\textbf`, etc. are supported, but `\bfseries`, etc. work only in some situations.

⚠ **HTML special chars** &, <, and > have special meanings in HTML. If `\&`, `\textless`, and `\textgreater` are used, proper HTML entities will be used, but there may be HTML parsing problems if these special characters occur unescaped in program listings or other verbatim text.

program listings For program listings, the `listings` package is supported, and its `literate` option is used to convert &, <, and > to proper HTML entities.

verbatim The various `verbatim`-related environments do not convert &, <, and >, so care must be taken to avoid accidentally including valid HTML code inside these environments. Adding a space on either side may be sufficient.

For high-level block and inline custom css classes, see section 51.9.

11639 \setlength{\LWR@templengthone}{#2}%
11640 \ifdimgreater{\LWR@templengthone}{0pt}{\newline}{%
11641 }
```

\LWR@minipagestartpars Minipages are often placed side-by-side inside figures, with a bit of horizontal space to separate them. Since HTML does not allow a <div> to be inside a p, paragraphs must be turned off during the generation of the minipage, then turned on after the minipage is complete. When this occurs between side-by-side minipages, lwarp correctly suppresses the paragraph tags between the minipages, unless some other text is between the minipages. Such text forms its own paragraph, resulting in text after a minipage to

\hspace \enskip \quad \qqquad be on its own line. Since people often place small horizontal space between minipages, it is desirable to maintain this space if possible. `lwarp` tries to do this by remembering that a minipage has been seen, in which case paragraph tags are suppressed around `\hspace`, `\enskip`, `\quad`, and `\qqquad` until the end of the paragraph, when the closing `p` tag is created.

When a minipage is seen, the boolean `LWR@minipagethispar` is set, telling the following horizontal whitespace commands to try to suppress their surrounding paragraph tags. `LWR@minipagethispar` is cleared at the next end of paragraph, when the `HTML` paragraph closing tag is generated.

Placed just before `\hspace`, `\quad`, or `\qqquad`'s `HTML` output.

```
11642 \newcommand*{\LWR@minipagestartpars}{%
11643 \ifbool{LWR@minipagethispar}{\LWR@startpars}{()}%
11644 }
```

`\LWR@minipagestopars` Placed just after `\hspace`, `\quad`, or `\qqquad`'s `HTML` output.

```
11645 \newcommand*{\LWR@minipagestopars}{%
11646 \ifbool{LWR@minipagethispar}{\LWR@stopars}{()}%
11647 }
```

`\quad` Handles special minipage & horizontal space interactions. Uses 2003 EM SPACE to pass validation.

```
11648 \renewrobustcmd*{\quad}{%
11649 \LWR@minipagestopars%
11650 \HTMLunicode{2003}%
11651 \LWR@minipagestartpars%
11652 }
```

`\qqquad` Handles special minipage & horizontal space interactions.

```
11653 \renewrobustcmd*{\qqquad}{\quad\quad}
```

`\enskip` Handles special minipage & horizontal space interactions.

```
11654 \renewrobustcmd*{\enskip}{%
11655 \LWR@minipagestopars%
11656 \HTMLunicode{2002}%
11657 \LWR@minipagestartpars%
11658 }
```

`\Len \LWR@tempwidth` Used to compute span width, height, raise for `\hspace` and `\rule`:

```
Len \LWR@tempheight 11659 \newlength{\LWR@tempwidth}
Len \LWR@tempraise 11660 \newlength{\LWR@tempheight}
11661 \newlength{\LWR@tempraise}
```

```
\LWR@select@html@\hspace * {<length>} * {<length>}
\hspace
```

Handles special minipage & horizontal space interactions.

Prints a span of a given width. Ignores the optional star.

`\hspace{\fill}` is converted to `\hspace{2em}`, equal to `\quad\quad`.

```
11662 \newcommand{\LWR@select@html@hspace}{%
11663 \RenewDocumentCommand{\hspace}{s m}{%
11664 \setLength{\LWR@tempwidth}{##2}}%
```

If \fill, change to \quad:

```
11665 \ifnum\gluestretchorder\LWR@tempwidth>0%
11666 \setlength{\LWR@tempwidth}{2em}%
11667 \fi%
```

Only if the width is greater than zero:

11668 \ifdimcomp{\LWR@tempwidth}{>}{\opt}{%

If had a minipage this paragraph, try to inline the white space without generating paragraph tags:

11669 \LWR@minipagestoppars%

Support the HTML thin wrappable space:

```
11670     \ifdimcomp{\LWR@tempwidth}{=}{.16667em}{%
11671     {%
11672         \HTMLunicode{2009}% thin breakable space
11673     }%
```

Print the span with the converted width. Not rounded.

```
11674 {%
11675     \LWR@htmltagc{%
11676         span style="width:\LWR@printlength{\LWR@tempwidth}; % extra space
11677             display:inline-block"%}
11678 }%
```

If formatting for a word processor, approximate with a number of \quads, in case a span of a given width is not supported:

```
11679     \ifboolexist{FormatWP}{%
11680         \setlength{\LWR@templengthone}{\LWR@tempwidth}%
11681         \whiledo{\lengthtest{\LWR@templengthone}>1em}{%
11682             \quad%
11683             \addtolength{\LWR@templengthone}{-1em}%
11684         }%
11685     }%
```

If NOT formatting for a word processor, include an empty comment to avoid an empty span:

```
11686 { \LWR@htmlcomment{} }%
```

Close the span:

```
11687 \LWR@htmltagc{/span}%
11688 }%
```

If had a minipage this paragraph, try to inline the white space without generating paragraph tags:

```
11689 \LWR@minipagestartpars%
11690 }{}% width greater than 0
11691 }%
11692 }
```

\LWR@select@html@nohspase * {<length>}
\hspase
Used to disable \hspase while creating description \items.

```
11693 \newcommand{\LWR@select@html@nohspase}{%
11694     \RenewDocumentCommand{\hspase}{s m}{%
11695 }}
```

\LWR@select@print@hspase

```
11696 \newcommand*{\LWR@select@print@hspase}{%
11697     \renewrobustcmd\hspase{\@ifstar\@hspacer\@hspase}%
11698 }
```

\hspase * {<length>}

Handles special minipage & horizontal space interactions.

```
11699 \LWR@select@html@hspase
```

\LWR@vspace * {<length>} Nullified vspace.

```
11700 \NewDocumentCommand{\LWR@HTML@vspace}{s m}{}
11701
11702 \LWR@formatted{vspace}
```

\linebreak [<num>] Inserts an HTML br tag.

```
11703 \renewcommand*{\linebreak}[1][]{\newline}
```

\nolinebreak [<num>]

```
11704 \renewcommand*{\nolinebreak}[1][]{}  
}
```

\pagebreak [*num*] Starts a new paragraph.

```
11705 \renewcommand*\{\pagebreak}[1][]{
11706
11707 }
```

\nopagebreak [*num*]

```
11708 \renewcommand*\{\nopagebreak}[1][]{}
```

\enlarge thispage * {*len*}

```
11709 \RenewDocumentCommand{\enlarge thispage}{s m}{}{}
```

\clearpage
\cleardoublepage

```
11710 \renewcommand*\{\clearpage}(){}
11711 \renewcommand*\{\cleardoublepage}{}{}
```

\rule [*raise*] {*width*} {*height*}

Handles special minipage & horizontal space interactions.

Creates a span of a given width and height. Ignores the optional star.

\fill is zero-width, so \hspace{\fill} is ignored.

```
11712 \newcommand*\{\LWR@HTML@rule}[3][]{}%
```

The width is copied into a temporary L^AT_EX length, from which comparisons and conversions may be made:

```
11713 \setlength{\LWR@tempwidth}{#2}%
```

If it's zero-width then skip the entire rule:

```
11714 \ifthenelse{\lengthtest{\LWR@tempwidth=0pt}}%
11715 {}% zero- width
11716 {% non-zero width
```

If it's non-zero width, set a minimal thickness so that it more reliably shows in the browser:

```
11717 \ifthenelse{%
11718   \lengthtest{\LWR@tempwidth>0pt}\AND%
11719   \lengthtest{\LWR@tempwidth<1pt}%
11720 }%
11721   {\setlength{\LWR@tempwidth}{1pt}}%
11722 }%
```

Likewise with height:

```

11723 \setlength{\LWR@tempheight}{#3}%
11724 \ifthenelse{%
11725   \lengthtest{\LWR@tempheight>0pt}\AND%
11726   \lengthtest{\LWR@tempheight<1pt}%
11727 }%
11728 {\setlength{\LWR@tempheight}{1pt}}%
11729 {}%

```

If had a minipage this paragraph, try to inline the rule without generating paragraph tags:

```
11730 \LWR@minipagestopars%
```

Print the span with the converted width and height. The width and height are NOT rounded, since a height of less than 1pt is quite common in L^AT_EX code.

```

11731 \LWR@findcurrenttextcolor%
11732 \LWR@htmntagcf%
11733 span\LWR@indentHTML%
11734 style="%"
```

The HTML background color is used to draw the filled rule according to the L^AT_EX foreground color set by \textcolor.

```
11735 \ifbool{FormatWP}{}{background:\LWR@currenttextcolor ; }%
```

The width and height are printed, converted to PT:

```

11736 width:\LWR@printlength{\LWR@tempwidth} ; %
11737 height:\LWR@printlength{\LWR@tempheight} ; %
```

The raise height is converted to a css transform. The *2 raise multiplier is to approximately match HTML output's X height. Conversion to a L^AT_EX length allows a typical L^AT_EX expression to be used as an argument for the raise, whereas printing the raise argument directly to HTML output without conversion to a L^AT_EX length limits the allowable syntax. To do: A superior method would compute a ratio of L^AT_EX ex height, then print that to HTML with an ex unit.

```

11738 \ifblank{#1}%
11739 {}%
11740 {%
11741   \setlength{\LWR@tempraise}{0pt-#1}%
11742   \setlength{\LWR@tempraise}{\LWR@tempraise*2}%
11743   \LWR@indentHTML%
11744   -ms-transform: translate(0pt,\LWR@printlength{\LWR@tempraise}); %
11745   \LWR@indentHTML%
11746   -webkit-transform: translate(0pt,\LWR@printlength{\LWR@tempraise}); %
11747   \LWR@indentHTML%
11748   transform: translate(0pt,\LWR@printlength{\LWR@tempraise}); %
11749   \LWR@indentHTML%
11750 }%
```

Display inline-block to place the span inline with the text:

```
11751     display:inline-block;"\LWR@orignewline%
11752     }%
```

If formatting for a word processor, approximate with a number of underscores, in case a span of a given width is not supported:

```
11753     \ifbool{FormatWP}{%
11754         \setlength{\LWR@templengthone}{\LWR@tempwidth}%
11755         \whiledo{\lengthtest{\LWR@templengthone>1em}}{%
11756             \_\_%
11757             \addtolength{\LWR@templengthone}{-1em}%
11758         }%
11759     }%
```

If NOT formatting for a word processor, add a comment to avoid an empty :

```
11760     {\LWR@htmlcomment{}%}
```

Close the span:

```
11761     \LWR@htmlltagc{/span}%
```

If had a minipage this paragraph, try to inline the white space without generating paragraph tags:

```
11762     \LWR@minipagestartpars%
11763 }% non-zero width
11764 }
11765
11766 \LWR@formatted{rule}

11767 \end{warpHTML}
```

92 \phantomsection

for HTML output: 11768 \begin{warpHTML}

\phantomsection Emulate the hyperref \phantomsection command, often used to insert the bibliography into the table of contents. Ignores \ForceHTMLTOC.

```
11769 \DeclareDocumentCommand{\phantomsection}{ }{%

11772 \section*{}%
11773 \endgroup%
11774 }

11775 \end{warpHTML}
```

93 \LaTeX and other logos

Logos for HTML and print modes:

Some of these logos may be redefined in a later package, so after loading other packages, and at the beginning of the document, their definitions are finally set by \LWR@formatted.

For css conversions, see:

<http://edward.oconnor.cx/2007/08/tex-poshlet>

<http://nitens.org/taraborelli/texlogo>

and the spacing described in the `metafont` package documentation.

```

```

File 4 l warp-a4.sty**§ 102 Package a4**

Pkg a4 a4 is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{a4}[2004/04/15]

```
2 \newcommand*\WideMargins{}
```

File 5 l warp-a4wide.sty**§ 103 Package a4wide**

Pkg a4wide a4wide is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{a4wide}[1994/08/30]

File 6 l warp-a5comb.sty**§ 104 Package a5comb**

Pkg a5comb a5comb is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{a5comb}

File 7 l warp-abstract.sty**§ 105 Package abstract**

(Emulates or patches code by PETER WILSON.)

Pkg abstract abstract is supported and patched by l warp.

⚠ **missing toc** If using the number option with file splits, be sure to place the table of contents before the abstract. The number option causes a section break which may cause a file split, which would put a table of contents out of the home page if it is after the abstract.

for HTML output: memoir provides an abstract environment even though it is not an article or report class. Meanwhile, l warp loads book to emulate memoir, but book does not have an abstract environment, so when the abstract package is loaded for emulation there is no pre-existing abstract to redefine, which would cause an error. Thus, a null abstract is provide here:

1 \ProvideDocumentEnvironment{abstract}{}{}{}

Accept all options for l warp-abstract:

2 \LWR@ProvidesPackagePass{abstract}[2009/06/08]

3 \AtBeginDocument{
4 \BeforeBeginEnvironment{abstract}{
5 \LWR@forcenewpage
6 \BlockClass{abstract}

19 \renewcommand*{\aiicon}[1]%
20 {%
21     \begin{lateximage}*[#1 icon][academicons#1]%
22     \AI\csname aiicon@#1\endcsname%
23     \end{lateximage}%
24 }
```

File 9 l warp-afterpage.sty**§ 107 Package afterpage**

(Emulates or patches code by DAVID CARLISLE.)

Pkg afterpage afterpage is emulated.

for HTML output: Discard all options for l warp-afterpage:

```
1 \LWR@ProvidesPackageDrop{afterpage}[2014/10/28]
2 \newcommand{\afterpage}[1]{#1}
```

File 10 l warp-accessibility.sty**§ 108 Package accessibility**

Pkg accessibility accessibility is emulated.

for HTML output: Discard all options for l warp-accessibility:

```
1 \LWR@ProvidesPackageDrop{accessibility}[2019/10/14]
2 \newcommand{\alt}[1]{\ThisAltText{#1}}
3 \newcommand{\newhref}[3]{\ThisAltText{#2}\href{#1}{#3}}%
4 \providecommand{\thead}[1]{\textbf{#1}}
```

File 11 l warp-accsupp.sty
§ 109 Package accsupp

Pkg accsupp accsupp is ignored.

for HTML output:

```

1 \LWR@ProvidesPackageDrop{accsupp}[2018/03/28]

2 \newcommand*{\BeginAccSupp}[1]{}
3 \newcommand*{\EndAccSupp}[1]{}

```

File 12 l warp-acro.sty
§ 110 Package acro

(Emulates or patches code by CLEMENS NIEDERBERGER.)

Pkg acro acro is patched for use by l warp.

for HTML output:

```

1 \LWR@ProvidesPackagePass{acro}[2019/10/12]

```

\DeclareAcronym is used in the preamble, where l warp has not yet made the dollar active, so temporarily enable l warp math catcode just for this definition:

```

2 \ExplSyntaxOn
3 \NewDocumentCommand \LWR@DeclareAcronym {mm}
4 {
5     \acro_declare_acronym:nn {#1} {#2}
6     \catcode`\$=3% l warp
7 }
8 \ExplSyntaxOff
9
10 \RenewDocumentCommand{\DeclareAcronym}{}{
11     \catcode`\$=\active% l warp
12     \LWR@DeclareAcronym
13 }

```

Modified to activate the current font:

```

14 \ExplSyntaxOn
15 \@ifpackagelater{acro}{2019/09/23}%
16 {% v2.10 or later
17 \cs_gset_protected:Npn \__acro_typeset:nn #1#2

```

File 13 **lwarp-acronym.sty**

§ 111 Package **acronym**

(Emulates or patches code by TOBIAS OETIKER.)

Pkg acronym acronym is patched for use by lwarp.

⚠ **multiply-defined labels** \acresetall does not work with cleveref, causing multiply-defined labels. lwarp patches acronym for HTML, but not for print mode.

for HTML output: 1 \LWR@ProvidesPackagePass{acronym}[2015/03/21]

Uses \textit instead of \itshape:

```

2 \renewcommand{\acfia}[1]{%
3  {\textit{\AC@acl{#1}}} (\ifAC@starred\acs*{#1}\else\acs{#1}\fi)}

```

Removes the mbox to allow math inside:

```
4 \renewcommand*\AC@acs[1]{%
5 %      \mbox{%
6 \expandafter\AC@get\csname fn@\#1\endcsname\@firstoftwo{\#1}%
7 % }
```

Fix for acronym labels in the captions of floats.

```
8 \renewcommand{\@starttoc}[1]{
9 \LWR@htmlelementclass{nav}{#1}
10 \LetLtxMacro{\@verridelabel}{\gobble}
11 \LWR@orig@starttoc{#1}
12 \LWR@htmlelementclassend{nav}{#1}
13 }
```

Modified for `cleveref` and `lwarp`:

```
14 \renewcommand*\AC@und@newl@bel[3]{%
15     \@ifundefined{#1@#3}{%
16         {%
17             \global\expandafter\let\csname#2@#3\endcsname\@nil
18             \global\expandafter\let\csname#2@#3@lwarp\endcsname\@nil% lwarp
19             \global\expandafter\let\csname#2@#3@cref\endcsname\@nil% lwarp
20         }%
21         {%
22             \global\expandafter\let\csname#1@#3\endcsname\relax
23             \global\expandafter\let\csname#1@#3@lwarp\endcsname\relax% lwarp
24             \global\expandafter\let\csname#1@#3@cref\endcsname\relax% lwarp
25         }%
26     }%
```

File 14 **lwarp-adjmulticol.sty**

§ 112 Package **adjmulticol**

(Emulates or patches code by BORIS VEYTSMAN.)

Pkg `adjmulticol` `adjmulticol` is emulated.

Emulation similar to `multicols` is used, with adjusted margins. If the number of columns is specified as 1, it is set so, but if two or greater are used, `lwarp` allows a variable number of columns up to three.

for HTML output

```
1 \LWR@ProvidesPackageDrop{adjmulticol}[2012/01/20]
2 \RequirePackage{multicol}

adjmultcols * {\langle numcols\rangle} {\langle left margin\rangle} {\langle right margin\rangle}

3 \NewDocumentEnvironment{adjmulticol}{s m m m}
4 {%
```

Compute the margins, and limit to positive only:

```
5 \setlength{\LWR@templengthone}{#3}%
6 \ifdimcomp{\LWR@templengthone}{<}{0pt}{\setlength{\LWR@templengthone}{0pt}}{}%
7 \setlength{\LWR@templengthtwo}{#4}%
8 \ifdimcomp{\LWR@templengthtwo}{<}{0pt}{\setlength{\LWR@templengthtwo}{0pt}}{}%
```

If one column is specified, use a <div> of class `singlecolumn`, else use `multicols`:

```
9 \newcommand*{\LWR@mcolstype}{multicols}%
10 \ifnumcomp{#2}{=}{1}{\renewcommand*{\LWR@mcolstype}{singlecolumn}}{}%
```

Help avoid page overflow:

```
11 \LWR@forcenewpage%
```

Create the <div> with the given margin and class:

```
12 \BlockClass[%
13 \LWR@print@mbox{margin-left:\LWR@printlength{\LWR@templengthone}} ; %
14 \LWR@print@mbox{margin-right:\LWR@printlength{\LWR@templengthtwo}}%
15 ]{\LWR@mcolstype}%
16 }
17 {\endBlockClass}
```

File 15 **l warp-addlines.sty**

§ 113 Package **addlines**

(Emulates or patches code by WILL ROBERTSON.)

Pkg `addlines` `addlines` is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{addlines}[2018/12/05]

```
2 \newcommand\addlines{@ifstar\addlines@a\addlines@a}%
3 \newcommand\addlines@a[1][1]{}%
4 \let\addline\addlines%
5 \newcommand\removelines{@ifstar\removelines@a\removelines@a}%
6 \newcommand\removelines@a[1][1]{}%
7 \let\removeline\removelines%
8 \newcommand\squeezepage[1][0]{}%
```

File 16 **l warp-afterpage.sty**

§ 114 Package **afterpage**

(Emulates or patches code by DAVID CARLISLE.)

Pkg `afterpage` `afterpage` is emulated.

for HTML output: Discard all options for l warp-afterpage:

```
1 \LWR@ProvidesPackageDrop{afterpage}[2014/10/28]
2 \newcommand{\afterpage}[1]{#1}
```

File 17 **l warp-algorithm2e.sty**

§ 115 Package **algorithm2e**

(Emulates or patches code by CHRISTOPHE FIORIO.)

Pkg algorithm2e algorithm2e is patched for use by l warp.

For print output, captions are placed according to package options, but for HTML output captions are placed where used. Therefore, to have captions appear at the top of the algorithms for both print and HTML, place each captions at the top of each algorithm.

for HTML output: 1 \LWR@ProvidesPackagePass{algorithm2e}[2017/07/18]

For the list-of entries:

```
2 \renewcommand{\l@algocf}[2]{\hypertocfloat{1}{\algocf}{\loa}{#1}{#2}}
```

Select the l warp float style according to the algorithm2e style:

```
3 \newcommand*{\LWR@floatstyle@algocf}{ruled}
4
5 \ifdefstring{\algocf@style}{boxed}{%
6 \renewcommand*{\LWR@floatstyle@algocf}{boxed}
7 }{%
8
9 \ifdefstring{\algocf@style}{boxruled}{%
10 \renewcommand*{\LWR@floatstyle@algocf}{boxruled}
11 }{%
12
13 \ifdefstring{\algocf@style}{plain}{%
14 \renewcommand*{\LWR@floatstyle@algocf}{plain}
15 }}
```

Paragraph handling to allow line numbers under certain conditions:

```
16 \newbool{\LWR@algocf@dopars}
17 \booltrue{\LWR@algocf@dopars}
18
19 \renewcommand{\algocf@everypar}{%
20 \ifbool{\LWR@algocf@dopars}{%
21   \ifbool{\LWR@doingstartpars}{%
22     \ifnumcomp{\value{\LWR@lateximagedepth}}{>}{0}{%
23       {}%
24     }%
25   }%
26 }
```

```

25           \algocf@everyparnl\algocf@everyparhanging%
26           }%
27   }{ }%
28 }{ }%
29 }

```

lwarp caption handling:

```

30 \renewcommand{\algocf@makedescription}[2]{%
31   \LWR@HTML@caption@begin{\algocf}%
32   \LWR@isolate{\algocf@captiontext{\#1}{\#2}}%
33   \LWR@HTML@caption@end%
34 }

```

Print any caption where it is declared:

```

35 \renewcommand{\algocf@makedescription@plain}[2]{%
36   \LWR@HTML@caption@begin{\algocf}%
37   \LWR@isolate{\algocf@captiontext{\#1}{\#2}}%
38   \LWR@HTML@caption@end%
39 }
40
41 \renewcommand{\algocf@makedescription@boxed}[2]{%
42   \LWR@HTML@caption@begin{\algocf}%
43   \LWR@isolate{\algocf@captiontext{\#1}{\#2}}%
44   \LWR@HTML@caption@end%
45 }
46
47 \renewcommand{\algocf@makedescription@ruled}[2]{%
48   \LWR@HTML@caption@begin{\algocf}%
49   \LWR@isolate{\algocf@captiontext{\#1}{\#2}}%
50   \LWR@HTML@caption@end%
51 }

```

Turn off line numbering while making the caption:

```

52 \long\def\algocf@latexcaption#1[#2]#3{%
53   \boolfalse{\LWR@algocf@dopars}%
54   \par%
55   \addcontentsline{\csname ext@#1\endcsname}{#1}%
56   {\protect\numberline{\csname the#1\endcsname}{\ignorespaces \LWR@isolate{\#2}}}%
57   \begingroup%
58   \parboxrestore%
59   \if@minipage%
60     \setminipage%
61   \fi%
62   \normalsize%
63   \makecaption{\csname fnum@\#1\endcsname}{\ignorespaces #3}\par%
64   \endgroup%
65 \booltrue{\LWR@algocf@dopars}%
66 }

```

Line numbers are printed in a of class alg2elinenumber:

```

67 \renewcommand{\algocf@printnl}[1]{%

```

```

68     \InLineClass{alg2elinenumber}{\NlSty{#1}}~%
69 }%

```

While initializing an algorithm environment, locally declare the style of a regular figure to be the same as the algorithm style, in case the `figure` option was used.

```

70 \preto\@algocf@init{%
71   \edef\LWR@floatstyle@figure{\LWR@floatstyle@algocf}%
72 }

```

For `lwarp`, the algorithm is not assembled inside a box, since `lateximages` would not work, so the captions are printed where declared.

```

73 \renewcommand{\@algocf@start}{%

```

File 21 **l warp-amsthm.sty**

§ 119 Package **amsthm**

(Emulates or patches code by PUBLICATIONS TECHNICAL GROUP—AMERICAN MATHEMATICAL SOCIETY.)

The original source code is located in `amsclass.dtx`, and printed in `amsclass.pdf`.

Pkg `amsthm` `amsthm` is patched for use by `l warp`.

Table 14: `amsthm` package—css styling of theorems and proofs

Theorem: <div> of class `amsthmbody<theoremstyle>`

Theorem Name: of class `amsthmname<theoremstyle>`

Theorem Number: of class `amsthmnumber<theoremstyle>`

Theorem Note: of class `amsthmnote<theoremstyle>`

Proof: <div> of class `amsthmproof`

Proof Name: of class `amsthmproofname`

where <theoremstyle> is plain, definition, etc.

for HTML output: `amsthm` must be loaded before `mdframed`:

```

1 \@ifpackageloaded{mdframed}{
2   \PackageError{l warp}
3   {Package mdframed must be loaded after package amsthm}
4   {%
5     Move \detokenize{\usepackage}{amsthm} before
6     \detokenize{\usepackage}{mdframed}. \MessageBreak
7     Package amsthm may be loaded by something else, \MessageBreak
8     which must also be moved before mdframed.%}
9   }
10 }
11 {}

12 \LWR@ProvidesPackagePass{amsthm}[2017/10/31]

```

Storage for the style being used for new theorems:

```
13 \newcommand{\LWR@newtheoremstyle}{plain}
```

Patched to remember the style being used for new theorems:

```

14 \renewcommand{\theoremstyle}[1]{%
15   \@ifundefined{th@#1}{%
16     \PackageWarning{amsthm}{Unknown theoremstyle '#1'}%
17     \thm@style{plain}%
18     \renewcommand{\LWR@newtheoremstyle}[1]{\l warp}%
19   }{%
20     \thm@style{#1}%
21     \renewcommand{\LWR@newtheoremstyle}[1]{\l warp}%
22   }%
23 }
```

Patched to remember the style for this theorem type:

```

24 \def\xnethm#1#2{%
25   \csedef{\LWR@thmstyle#2}{\LWR@newtheoremstyle}\% \l warp
26   \let\@tempa\relax
27   \@xp\@ifdefinable\csname #2\endcsname{%
28     \global\@xp\let\csname end#2\endcsname\@endtheorem
29     \ifx *#1% unnumbered, need to get one more mandatory arg
30       \edef\@tempa##1{%
31         \gdef\@xp\@nx\csname#2\endcsname{%
32           \@nx\@thm{\@xp\@nx\csname th@\the\thm@style\endcsname}%
33           {}{##1}}%
34       \else % numbered theorem, need to check for optional arg
35         \def\@tempa{\@oparg{\@ynthm{#2}}[]}\%
36       \fi
37     \AtBeginEnvironment{#2}{\edef\LWR@thisthmstyle{\@nameuse{\LWR@thmstyle#2}}}\% \l warp
38   }%
39   \@tempa
40 }
```

Patched to enclose with css:

```

41 \newcommand{\LWR@haveamsthmname}{%
42 \renewcommand{\thmname}[1]{\InlineClass{amsthmname}\LWR@thisthmstyle{##1}}%
43 }%
44
45 \newcommand{\LWR@haveamsthmnumber}{%
46 \renewcommand{\thmnumber}[1]{\InlineClass{amsthmnumber}\LWR@thisthmstyle{##1}}%
47 }%
48
49 \newcommand{\LWR@haveamsthmnote}{%
50 \renewcommand{\thmnote}[1]{\InlineClass{amsthmnote}\LWR@thisthmstyle{##1}}%
51 }%
52
53 \LWR@haveamsthmname
54 \LWR@haveamsthmnumber
55 \LWR@haveamsthmnote
```

Patches for css:

```

56 \def\@begintheorem#1#2[#3]{%
57   \item[
```

```

58 % \deferred@thm@head{
59 %   \the\thm@headfont \thm@indent
60 %   \@ifempty{\#1}{\let\thmname\@gobble}{\LWR@haveamsthmname}%

```

File 22 l warp-anonchap.sty**§ 120 Package anonchap**

(Emulates or patches code by PETER WILSON.)

Pkg anonchap anonchap is emulated.

Pkg tocloft If using tocloft with tocbibind, anonchap, fncychap, or other packages which change chapter title formatting, load tocloft with its titles option, which tells tocloft to use standard L^AT_EX commands to create the titles, allowing other packages to work with it.

⚠ tocloft & other packages The code is shared by tocbibind.

for HTML output:

```
1 \LWR@ProvidesPackageDrop{anonchap}[2009/08/03]

2 \newcommand{\simplechapter}[1][\@empty]{%
3   \def\@chapcntformat##1{%
4     #1~\csname the##1\endcsname\simplechapterdelim\quad%
5   }%
6 }
7
8 \newcommand{\restorechapter}{%
9 \let\@chapcntformat\@seccntformat%
10 }
```

File 23 l warp-any size.sty**§ 121 Package anysize**

(Emulates or patches code by MICHAEL SALZENBERG, THOMAS ESSER.)

Pkg anysize anysize is ignored.

for HTML output:

```
1 \LWR@ProvidesPackageDrop{any size}[1994/08/13]

2 \def\papersize#1#2{}
3 \def\marginsize#1#2#3#4{}
```

File 24 l warp-appendix.sty**§ 122 Package appendix**

(Emulates or patches code by PETER WILSON.)

Pkg appendix appendix is patched for use by l warp.

- ⚠ incorrect toc link** During HTML conversion, the option toc without the option page results in a toc link to whichever section was before the appendices environment. It is recommended to use both toc and also page at the same time.

for HTML output: 1 \LWR@ProvidesPackagePass{appendix}[2009/09/02]

```

2 \renewcommand*{\@chap@pppage}{%
3 \part*{\appendixpagename}%
4 \if@dotoc@pp
5 \addappheadtotoc
6 \fi
7 }
8
9 \renewcommand*{\@sec@pppage}{%
10 \part*{\appendixpagename}%
11 \if@dotoc@pp
12 \addappheadtotoc
13 \fi
14 }
```

File 25 **lwarp-ar.sty**

§ 123 Package **ar**

(Emulates or patches code by AGOSTINO DE MARCO.)

Pkg ar ar is patched for use by lwarp.

for HTML output: 1 \LWR@ProvidesPackagePass{ar}[2012/01/23]

Measure and print the width of the supplied glyph.

```

2 \newlength{\LWR@ar@width}
3
4 \newcommand*{\LWR@ar@printwidth}[1]{%
5   \setlength{\LWR@ar@width}{\widthof{#1}}%
6   width:%
7   \LWR@convertto{em}{\the\LWR@ar@width}em%
8 }
```

The HTML version of \AR:

```
9 \newrobustcmd*{\LWR@HTML@AR}{%
```

Start a hashed \teximage, additionally hashed by the font series, with a width depending on the given glyph:

```
10 \begin{teximage}*[\AR][\LWR@f@series][\LWR@ar@printwidth{\LWR@print@AR}]%
```

For text mode, set the font series according to the HTML font series:

```
11 \ifmmode\else\csuse{\LWR@orig\LWR@f@series}{\series}\fi%
```

Print the original glyph using the newly set font series:

```
12 \LWR@print@AR%
```

Done.

```
13 \end{lateximage}%
14 }
```

Combine the print and HTML versions:

```
15 \LWR@formatted{AR}

16 \newrobustcmd*{\LWR@HTML@ARb}{%
17   \begin{lateximage}*{[AR][b]}[\LWR@ar@printwidth{\LWR@print@ARb}]%

37   \LWR@print@ARtt%
38   \end{lateximage}%
39 }
40 \LWR@formatted{ARtt}
```

File 26 **l warp-arabicfront.sty**

§ 124 Package **arabicfront**

Pkg arabicfront arabicfront is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{arabicfront}[2006/09/03]

File 27 l warp-array.sty**§ 125 Package array**

Pkg array array is used as-is for print output, and emulated for HTML.

plarray and plectarray do not affect \firsthline or \lasthline, and so are not affected by the following.

Remove the default nullified macros:

```
1 \let\firsthline\relax
2 \let\lasthline\relax
3
4 \LWR@ProvidesPackagePass{array}[2018/12/30]

5 \newcommand*{\LWR@HTML@firsthline}{\LWR@HTMLhline}%
6 \LWR@expandableformatted{firsthline}
7
8 \newcommand*{\LWR@HTML@lasthline}{\LWR@HTMLhline}%
9 \LWR@expandableformatted{lasthline}

10 \providecommand*{\LWR@HTML@tabularnewline}{\LWR@tabularendofline}
11 \LWR@formatted{tabularnewline}
```

File 28 l warp-arydshln.sty**§ 126 Package arydshln**

(Emulates or patches code by HIROSHI NAKASHIMA.)

Pkg arydshln arydshln heavily patches tabular code, so the actual package is not used. arydshln is emulated for HTML tabular, and reverts to solid rules for SVG math array and tabular in a lateximage.

css is not able to display a double-dashed border, so a single-dashed rule is displayed as a single-dashed border, and a double-dashed rule is displayed as a thicker single-dashed border.

for HTML output: array is required to allow \newcolumn below.

```
1 \RequirePackage{array}
2 \LWR@ProvidesPackageDrop{arydshln}[2018/09/26]
```

Ignored, but included for source compatibility:

```

3 \newdimen\dashlinedash \dashlinedash4pt %
4 \newdimen\dashlinegap \dashlinegap4pt %
5 \let\hdashlinewidth\dashlinedash
6 \let\hdashlinegap\dashlinegap
7
8 \def\ADLnullwide{}
9 \def\ADLsomewide{}
10 \def\ADLnullwidehline{}
11 \def\ADLsomewidehline{}
12
13 \def\ADLactivate{}
14 \def\ADLinactivate{}
15 \newcommand*{\ADLdrawingmode}[1]{}
16 \newcommand*{\ADLnoshorthanded}{}
17 \newcommand*{\dashgapcolor}[2][]{}
18 \newcommand*{\nodashgapcolor}{}{}
```

In a `lateximage`, revert to solid vertical rules:

```

19 \appto\LWR@restoreorigformatting{%
20 \newcolumntype{::}{|}%
21 \newcolumntype{;}{[1]}{|}%
22 \LetLtxMacro\hdashline\hline%
23 }
```

Some of these macros are already defined as temporary placeholders in the `lwarp` core, so they must be redefined here.

The emulated defaults also work for an emulated print mode inside a `lateximage`:

```

24 \def\hdashline{
25 %     \adl@hdashline\adl@ihdashline
26     \adl@hdashline\adl@inactivehdl
27 }
28 \def\adl@hdashline#1{\noalign{\ifnum0='}\fi
29 %     \ifadl@zhrule \vskip-\arrayrulewidth
30 %     \else
31 %         \adl@hline\adl@connect\arrayrulewidth
32 %             \hrule \height \arrayrulewidth% lwarp
33 %     \fi
34     \@ifnextchar[%]
35         {#1}%
36         {#1[%}
37 %             \dashlinedash/\dashlinegap
38             1pt/1pt
39         ]{}}
40 % \def\adl@ihdashline[#1/#2]{\ifnum0='{\fi}%
41 %     \multispan{\adl@columns}\unskip \adl@hcline\z@[#1/#2]%

25 \xpretocmd{\atfi@acroPaperclip}{\LWR@attachfile@icon}{}{}
26 \xapptocmd{\atfi@acroPaperclip}{\endLWR@attachfile@icon}{}{}
27
28 \xpretocmd{\atfi@acroPushPin}{\LWR@attachfile@icon}{}{}
29 \xapptocmd{\atfi@acroPushPin}{\endLWR@attachfile@icon}{}{}
30
31 \xpretocmd{\atfi@acroTag}{\LWR@attachfile@icon}{}{}
32 \xapptocmd{\atfi@acroTag}{\endLWR@attachfile@icon}{}{}
```

Disable PDF file embedding:

```
33 \DeclareRobustCommand{\atfi@embedfile}[1]{}
```

The displayed output for an \attachfile reference:

```
34 \newcommand*{\LWR@attachfile@appearance}{}%
35
36 \def\atfi@set@appearance@icon{%
37   \atfi@set@appearance{\csname atfi@acro\atfi@icon@icon\endcsname}%
38 }
39
40 \DeclareRobustCommand{\atfi@set@appearance}[1]{%
41   \def\LWR@attachfile@appearance{\#1}%
42 }
```

A file annotation becomes a reference:

```
43 \DeclareRobustCommand{\atfi@insert@file@annot}[1]{%
44   \href{\#1}{\LWR@attachfile@appearance}%
45 }
```

Modified for text color:

```
46 \DeclareRobustCommand{\notextattachfile}[2][]{%
47   \begingroup
48   \atfi@setup{\#1}%
49   \ifatfi@print
50     \leavevmode
51     \begingroup
52       \HyColor@UseColor\atfi@color@tex
53       \LWR{textcurrentcolor{\#2}}%      lwarp
54   \strut
55   \endgroup
56 %   \else
57 %     \sbox{\ltx@zero{\#2}\strut}%
58 %     \makebox[\wd0]{}
59   \fi
60   \endgroup
61 }
```

Modified to draw the icon:

```
62 \DeclareRobustCommand{\noattachfile}[1][]{%
63   \begingroup
64   \atfi@setup{\#1}%
65   \atfi@set@appearance@icon
66   \ifatfi@print
67     \LWR@attachfile@appearance%      lwarp
68 %   \expandafter
69 %     \atfi@refxform\csname atfi@appobj@\atfi@icon@icon\endcsname
70 %   \else
71 %     \makebox[\atfi@appearancewidth]{}
72   \fi
73   \endgroup
```

74 }

File 33 **lwarp-authblk.sty**

§ 131 Package **authblk**

(Emulates or patches code by PATRICK W. DALY.)

Pkg authblk authblk is patched for HTML.

package support lwarp supports the native LATEX titling commands, and also supports the packages authblk and titling. If both are used, authblk should be loaded before titling.

⚠ load order If using the titling package, additional titlepage fields for \published and \subtitle may be added by using \AddSubtitlePublished in the preamble. See section 66.8.

(Emulates or patches code by PATRICK W. DALY.)

for HTML output Require that authblk be loaded before titling:

```
1 \@ifpackageloaded{titling}{  
2 \PackageError{lwarp-authblk}{  
3 {Package authblk must be loaded before titling}  
4 {Titling appends authblk's author macro, so authblk must be loaded first.}  
5 }  
6 {}}
```

Load authblk:

7 \LWR@ProvidesPackagePass{authblk}[2001/02/27]

Patch to add a class for the affiliation:

```
8 \LetLtxMacro{\LWRAB@affil}{\affil}  
9  
10 \renewcommand{\affil}[2][]{{%  
11 \LWRAB@affil[#1]{\protect\InlineClass{affiliation}{#2}}}  
12 }}
```

Create an HTML break for an \authorcr:

13 \renewcommand*{\authorcr}{\protect\LWR@newlinebr}

File 34 **lwarp-autonum.sty**

§ 132 Package **autonum**

Pkg autonum autonum is ignored.

⚠ numbering All equations are numbered in HTML output.

MATHJAX does not support the “+” environments.

for HTML output:

```
1 \LWR@ProvidesPackageDrop{autonum}[2015/01/18]

2 \RequirePackage{amsmath}
3
4
5 \newenvironment{equation+}{\equation}{\endequation}
6
7
8 \newenvironment{gather+}{\gather}{\endgather}
9
10 \BeforeBeginEnvironment{gather+}{\LWR@amsmathenv@@before{gather+}}
11
12 \AfterEndEnvironment{gather+}{\LWR@amsmathenv@@after}
13
14
15 \newenvironment{multiline+}{\multiline}{\endmultiline}
16
17 \BeforeBeginEnvironment{multiline+}{\LWR@amsmathenv@@before{multiline+}}
18
19 \AfterEndEnvironment{multiline+}{\LWR@amsmathenv@@after}
20
21
22 \newenvironment{flalign+}{\flalign}{\endflalign}
23
24 \BeforeBeginEnvironment{flalign+}{\LWR@amsmathenv@@before{flalign+}}
25
26 \AfterEndEnvironment{flalign+}{\LWR@amsmathenv@@after}
27
28
29 \newenvironment{align+}{\align}{\endalign}
30
31 \BeforeBeginEnvironment{align+}{\LWR@amsmathenv@@before{align+}}
32
33 \AfterEndEnvironment{align+}{\LWR@amsmathenv@@after}
34
35
36 \newenvironment{alignat+}{\alignat}{\endalignat}
37
38 \BeforeBeginEnvironment{alignat+}{\LWR@amsmathenv@@before{alignat+}}
39
40 \AfterEndEnvironment{alignat+}{\LWR@amsmathenv@@after}
41
42
43 \newenvironment{split+}{\split}{\endsplit}
```

File 35 **lwarp-axessibility.sty**

§ 133 Package **axessibility**

Pkg axessibility axessibility is ignored.

for HTML output:

```
1 \LWR@ProvidesPackageDrop{axessibility}
2 \newcommand{\wrap}[1]{}

File 41 l warp-bib latex.sty

§ 139 Package **bib latex**

(Emulates or patches code by PHILIPP LEHMAN.)

Pkg bib latex When **bib latex** is used, modifications from **newfloat** may have to be undone.

for HTML output:

1. **l warp** uses **newfloat**.
2. For classes with chapters which **newfloat** does not know about, such as CTEX-related classes, **newfloat** may modify **\addtocontents**.
3. **bib latex**, though, wants to patch **\addtocontents**, which causes an error if **\addtocontents** has been changed.
4. Therefore, **\addtocontents** is restored to its original here, since **bib latex** is about to be loaded.
5. This means that the **newfloat**'s **chapterlistsgaps** option may no longer work.

```

1 \ifdef{\newfloat@addtocontents@ORI}{%
2   \let\addtocontents\newfloat@addtocontents@ORI
3 }{}}

4 \LWR@ProvidesPackagePass{bib latex}[2018/03/04]

```

File 42 l warp-bibunits.sty

§ 140 Package **bibunits**

(Emulates or patches code by THORSTEN HANSEN.)

Pkg bibunits **bibunits** is patched for use by **l warp**.

for HTML output:

```

1 \LWR@ProvidesPackagePass{bibunits}[2004/05/12]

2 \def\bu@bibdata{\BaseJobname}

```

File 43 **l warp-bigdelim.sty**

§ 141 Package **bigdelim**

(Emulates or patches code by PIET VAN OOSTRUM, ØYSTEIN BACHE, JERRY LEICHTER.)

Pkg **bigdelim** **bigdelim** is used as-is for print or `\textrimage`, and patched for HTML.

The delimiters are displayed in HTML by printing the delimiter, the text, and a thick border across the side of the `\multirow` which indicates the actual height of the delimiter. The delimiter character is given a `` class of `ldelim` or `rdelim`, and the default css sets this to `font-size:200%`

 **use `\mrowcell`** `\ldelim` and `\rdelim` use `\multirow`, so `\mrowcell` must be used in the proper number of empty cells in the same column below `\ldelim` or `\rdelim`, but not in cells which are above or below the delimiter:

```
\begin{tabular}{lll}
<empty> & a & b \\
\ldelim{\{}{\}{3}{.25in}[left ] & c & d \\
\mrowcell & e & f \\
\mrowcell & g & h \\
<empty> & i & j \\
\end{tabular}
```

<->	a b
c d	left
e f	
g h	
<->	i j

for HTML output First, remove the temporary definitions of `\ldelim` and `\rdelim`, which were previously defined for tabular scanning in case `bigdelim` was not loaded:

```
1 \let\ldelim\relax
2 \let\rdelim\relax
```

Next, load the package's new definitions:

```
3 \LWR@ProvidesPackagePass{bigdelim}[2018/08/03]
```

```
\ldelim {\{1:delimiter\}} {\{2:#rows\}} {\{3:width\}} [ {\{4:text\}} ]
\rdelim
4 \NewDocumentCommand{\LWR@HTML@ldelim}{m m m O{} }{%
5 \renewcommand{\LWR@multirowborder}{right}%
6 \multirow{#2}{#3}{#4 \InlineClass{ldelim}{#1}}%
7 }%
8
```

```

9 \LWR@formatted{ldelim}
10
11 \NewDocumentCommand{\LWR@HTML@rdelim}{m m m O{}}{%
12 \renewcommand{\LWR@multirowborder}{left}%
13 \multirow{#2}{#3}{\InlineClass{rdelim}{#1} #4}%
14 }
15
16 \LWR@formatted{rdelim}
```

File 44 **lwarp-bigfoot.sty**

§ 142 Package **bigfoot**

Pkg **bigfoot** **bigfoot** is emulated.

for HTML output: 1 \LWR@ProvidesPackageDrop{bigfoot}[2015/08/30]

```

2 \RequirePackage{manyfoot}
3 \RequirePackage{perpage}
4
5 \def\RestyleFootnote#1#2{%

14 \newcommand*\{\targettopbottom}){}
15 \newcommand*\{\twoupemptypage}){}
16 \newcommand*\{\twoupclearpage}){}
17 \newcommand*\{\checkforlandscape}){}

```

File 49 **l warp-bookmark.sty**

§ 147 Package **bookmark**

(Emulates or patches code by HEIKO OBERDIEK.)

Pkg **bookmark** **bookmark** is ignored.

for HTML output: Discard all options for **l warp-bookmark**:

```

1 \LWR@ProvidesPackageDrop{bookmark}[2016/05/17]

2 \newcommand*\{\bookmarksetup}[1]{}
3 \newcommand*\{\bookmarksetupnext}[1]{}
4 \newcommand*\{\bookmark}[2][]{}
5 \newcommand*\{\bookmarkdefinestyle}[2]{}
6 \newcommand*\{\bookmarkget}[1]{}
7 \newcommand{\BookmarkAtEnd}[1]{}

```

File 50 **l warp-booktabs.sty**

§ 148 Package **booktabs**

(Emulates or patches code by SIMON FEAR.)

Pkg **booktabs** **booktabs** is emulated during **HTML** output, and used as-is during print output and inside an **HTML** **lateximage**.

for HTML output: First, forget the placeholder macros:

```

1 \LetLtxMacro\toprule\relax
2 \LetLtxMacro\midrule\relax
3 \LetLtxMacro\cmidrule\cline
4 \LetLtxMacro\bottomrule\relax
5 \LetLtxMacro\addlinespace\relax
6 \LetLtxMacro\morecmidrules\relax

```

```

7 \LetLtxMacro\specialrule\relax
8
9 \LWR@ProvidesPackagePass{booktabs}[2019/10/08]

```

Adjust to work even if `xltabular` is loaded:

```

10 \% \def\LWR@HTML@@BLTrule{@BTnormal}
11 %
12 \% \LWR@formatted{@BLTrule}
13 \LetLtxMacro\@BLTrule@BTnormal

3 \providecommand{\chappgssep}{--}

```

File 68 **lwarf-chapterbib.sty**

§ 166 Package **chapterbib**

(Emulates or patches code by DONALD ARSENEAU.)

Pkg chapterbib chapterbib is patched for use by lwarf.

for HTML output:

```

1 \LWR@ProvidesPackagePass{chapterbib}[2010/09/18]

2 \xdef\@savedjobname{\BaseJobname}
3 \let\@currentipfile\@savedjobname

```

File 69 **lwarf-chemfig.sty**

§ 167 Package **chemfig**

(Emulates or patches code by CHRISTIAN TELLECHEA.)

Pkg chemfig chemfig is patched for use by lwarf.

If using `\polymerdelim` to add delimiters to a `\chemfig`, wrap both inside a single `lateximage`:

```
\begin{lateximage}[-chemfig-~\PackageDiagramAltText]
\chemfig{...}
\polymerdelim[...]{...}
\end{lateximage}
```

The images are not hashed because they depend on external settings which may be changed at any time, and are unlikely to be reused inline anyhow.

for HTML output: 1 \LWR@ProvidesPackagePass{chemfig}

File 70 l warp-chemformula.sty**§ 168 Package chemformula**

(Emulates or patches code by CLEMENS NIEDERBERGER.)

Pkg chemformula chemformula is patched for use by l warp.

The SVG images are hashed according to contents and local options. Global options are assumed to be constant document-wide.

⚠ **chemformula with MATHJAX** chemformula works best without MATHJAX. If MATHJAX is used, \displaymathother must be used before array, and then \displaymathnormal may be used after. (The chemformula package adapts to array, but does not know about MATHJAX, and MATHJAX does not know about chemformula.)

While using MATHJAX, \displaymathother may also be used for other forms of display and inline math which contain chemformula expressions.

for HTML output: 1 \LWR@ProvidesPackagePass{chemformula}[2019/10/13]

2 \ExplSyntaxOn

- \ch Enclose in an inline svg image or MathJax. The alt tag is the contents of the \ch expression. The filename is hashed, and also has additional hashing information based on the local options.

```
3 \RenewDocumentCommand \ch { O{}m }
4 {%
```

To work inside align with \displaymath other, a simple version must be used to work with chemformula's adaptation to align.

```
5   \ifnumcomp{\value{LWR@lateximagedepth}}{>}{0}%
6   {
7     \chemformula_ch:nn {#1} {#2}%
8   } original
```

If used as the outer level, must temporarily ensure MATHJAX is disabled:

```
9   {
10    \begingroup%
11    \boolfalse{mathjax}%

```

An inline image is used, adjusted for the baseline:

```
12   \LWR@subsingle$*{%
13     \textbackslash{}ch\{\LWR@HTMLsanitize{#2}\}%
14   } alt text
15   \protect\LWR@HTMLsanitize{\detokenize\expandafter{#1}}%
16   } add'l hashing
17   {%
18     \chemformula_ch:nn {#1} {#2}%
19   } original
20   \endgroup%
21 }
22 }
```

- \chcpd Similar to \ch.

108     }
109     \endgroup%
110 }

```

lwarp redefines the \$ character, so special handling is required to escape math expressions inside \ch.

This boolean tracks a new kind of escaped math:

```
111 \bool_new:N      \l__chemformula_first_last_LWRdollar_bool
```

\chemformula_input_escape_math

Adds additional escaping for the new dollar definition:

```

112 \cs_gset_protected:Npn \__chemformula_input_escape_math:n #1
113 {
114     \__chemformula_first_last_math:n {\#1}
115     \bool_if:NT \l__chemformula_first_last_dollar_bool
116     {
117         \bool_set_true:N \l__chemformula_first_last_math_bool
118         \__chemformula_read_escape_dollar:w #1 \q_nil
119     }
120     \bool_if:NT \l__chemformula_first_last_mathbraces_bool
121     {
122         \bool_set_true:N \l__chemformula_first_last_math_bool
123         \__chemformula_read_escape_mathbraces:w #1 \q_nil
124     }

```

Added by lwarp:

```

125     \bool_if:NT \l__chemformula_first_last_LWRdollar_bool%      lwarp
126     {
127         \bool_set_true:N \l__chemformula_first_last_math_bool%  lwarp
128         \__chemformula_read_escape_LWRdollar:w #1 \q_nil%      lwarp
129     }

```

```
130 }
```

\chemformula_read_escape_LWRdollar

The following parses the contents inside the new dollars.

lwarp keeps the dollar as its original math shift until the document starts. While chemmacros is being patched, the dollar must temporarily be set to its new meaning during the following definition.

```
131 \begingroup
132 \catcode`\$=\active
133
134 \cs_new_protected:Npn \__chemformula_read_escape_LWRdollar:w $#1$ \q_nil
135 {
136     \__chemformula_read_escape_math:n {#1}
137 }
138
139 \endgroup
```

\chemformula_bool_set_if_first_last

The following looks at the first and last tokens for delimiters to escape math inside \ch. The original definition is modified to look for the control sequences which are used by the new meaning of \$.

```
140 \cs_new_protected:Npn \__chemformula_bool_cs_set_if_first_last:NnNN #1#2#3#4
141 {
142     \int_zero:N \l__chemformula_tmpa_int
143     \int_zero:N \l__chemformula_tmpb_int
144     \int_set:Nn \l__chemformula_tmpa_int { \tl_count:n {#2} }
145     \tl_map_inline:nn {#2}
146     {
147         \int_incr:N \l__chemformula_tmpb_int
148         \int_compare:nT { \l__chemformula_tmpb_int = 1 }
149     }
```

At the start, the cs_ version compares control sequences:

```
150         \ifdefstreq{##1}{#3}%
151             \l warp
152             {
153                 \bool_set_true:N #1
154             }%
155 }
```

At the end, compare more control sequences:

```
156     \int_compare:nT { \l__chemformula_tmpb_int = \l__chemformula_tmpa_int }
157     {
158         \ifdefstreq{##1}{#4}
159         {}
160         {
161             \bool_set_false:N #1
162         }
163     }
```

```
164      }
165 }
```

\chemformula_first_last_math

Modified to check for the new meaning of \$ at first/last:

```
166 \cs_gset_protected:Npn \__chemformula_first_last_math:n #1
167 {
168   \bool_set_false:N \l__chemformula_first_last_math_bool
169   \bool_set_false:N \l__chemformula_first_last_dollar_bool
170   \bool_set_false:N \l__chemformula_first_last_LWRdollar_bool% lwarp
171   \bool_set_false:N \l__chemformula_first_last_mathbraces_bool
172   \__chemformula_bool_set_if_first_last:Nnnn
173     \l__chemformula_first_last_dollar_bool
174     {#1}
175     { $ } { $ }
176   \bool_if:NF \l__chemformula_first_last_dollar_bool
177   {
178     \__chemformula_bool_set_if_first_last:Nnnn
179     \l__chemformula_first_last_mathbraces_bool
180     {#1}
181     { \(\) { \) }
```

Added by lwarp:

```
182   \bool_if:NF \l__chemformula_first_last_mathbraces_bool% lwarp
183   {
184     \__chemformula_bool_cs_set_if_first_last:NnNN
185     \l__chemformula_first_last_LWRdollar_bool
186     {#1}
187     { \LWR@newsingledollar } { \LWR@newsingledollar }
188   }% lwarp
189 }
190 }

191 \ExplSyntaxOff
```

File 71 **lwarp-chemgreek.sty**§ 169 Package **chemgreek**

(Emulates or patches code by CLEMENS NIEDERBERGER.)

Pkg chemgreek chemgreek is patched for use by lwarp.

Greek symbols To use text-mode symbols, use packages `textalpha` or `textgreek`. Using the other packages supported by `chemgreek` will result in math-mode greek characters, which will result in SVG images being used. These images will be hashed.

⚠ package selection If using X_EL^AT_EX or LuaL^AT_EX, select the `fontspec` mapping:

```
\selectchemgreekmapping{fontspec}
```

for HTML output:

```

1 \LWR@ProvidesPackagePass{chemgreek}[2016/02/10]

2 \ExplSyntaxOn
3
4 \cs_gset_protected:Npn \chemgreek_text:n #1
5   { { \text {#1} } }
6
7 \appto\LWR@restoreorigformatting{%
8 \cs_set_protected:Npn \chemgreek_text:n #1%
9   { \ensuremath { \text {#1} } } }%
10 }
11
12 \ExplSyntaxOff

```

File 72 **l warp-chemmacros.sty**

§ 170 Package **chemmacros**

(Emulates or patches code by CLEMENS NIEDERBERGER.)

Pkg chemmacros chemmacros is patched for use by l warp.

for HTML output:

```
1 \LWR@ProvidesPackagePass{chemmacros}[2017/08/28]
```

SVG file hashing assumes that the relevant options are constant for the entire document.

§ 170.1 Changes to the user's document

⚠ \makepolymerdelims

When using \makepolymerdelims, enclose the entire expression inside a polymerdelims environment, such as (from the chemmacros manual):

```
\begin{polymerdelims}
\chemfig{-[@{op,.75}]CH_2-CH(-[6]Cl)-[@{cl,0.25}]}
\makepolymerdelims{5pt}[27pt]{op}{cl}
\end{polymerdelims}
```

⚠ redox reactions

Redox reactions must be enclosed inside a redoxreaction environment. For print output, extra space must be included above and/or below the result, so they are declared as arguments to the environment, instead of being manually entered as per the chemmacros manual. For HTML output, the extra space is ignored and a lateximage is used instead.

```
\begin{redoxreaction}{7mm}{7mm}
\OX{a,Na} $ \rightarrow $ \OX{b,Na}\pch\redox(a,b){oxidation}
\end{redoxreaction}
```

§ 170.2 **Code**

§ 170.3 **Loading modules**

Patching chemmacros modules must be done `\AtBeginDocument`, since modules are invoked by the user in the preamble, and each patch is only done if the module is loaded.

```

2 \ExplSyntaxOn
3
4 \newcommand{\@ifchemmacrosmoduleloaded}[1]{%
5 \ifl@aded{\c__chemmacros_module_extension_tl}{\c__chemmacros_module_prefix_tl.\#1}%
6 }
7
8 \ExplSyntaxOff

```

§ 170.4 **New environments**

`\makepolymerdelims` and redox reactions must be enclosed in a `lateximage` during HTML output. These environments are provided here in HTML mode, and in the `lwarp` core in print mode, as a high-level semantic syntax which automatically embeds the contents in a `lateximage` with an appropriate `alt` tag.

Env `polymerdelims`

```

9 \DeclareDocumentEnvironment{polymerdelims}{}%
10 {\begin{lateximage}[-chemmacros- polymer]}%
11 {\end{lateximage}}

```

Env `redoxreaction` *{⟨space above⟩} {⟨space below⟩}*

For HTML output, the above and below space is ignored, and a `lateximage` is used instead. For the print output version, see section 86.

```

12 \DeclareDocumentEnvironment{redoxreaction}{m m}%
13 {\begin{lateximage}[-chemmacros- redoxreaction]}%
14 {\end{lateximage}}

```

15 `\ExplSyntaxOn`

§ 170.5 **Acid-base**

```

16 \AtBeginDocument{%
17 \@ifchemmacrosmoduleloaded{acid-base}{%
18 \PackageInfo{lwarp}{Patching~chemmacros~module~acid-base}%
19

File 74 l warp-chkfloat.sty**§ 172 Package chkfloat**

Pkg chkfloat chkfloat is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{chkfloat}[2012/08/19]

File 75 l warp-chngpage.sty**§ 173 Package chngpage**

(Emulates or patches code by PETER WILSON.)

Pkg chngpage chngpage is ignored.

for HTML output: Discard all options for l warp-chngpage:

1 \LWR@ProvidesPackageDrop{chngpage}[2009/10/20]
2 \LWR@origRequirePackage{l warp-changepage}

File 76 l warp-cite.sty**§ 174 Package cite**

(Emulates or patches code by DONALD ARSENEAU.)

Pkg cite cite is patched for use by l warp.

for HTML output: 1 \LWR@ProvidesPackagePass{cite}[2015/02/27]

For the [super] option, the \kern must be removed:

```
2 \def\LWRCT@biblabel#1{@citess{#1}\kern-\labelsep, }  
3  
4 \ifdef\streq{\@biblabel}{\LWRCT@biblabel}  
5 {  
6     \def\@biblabel#1{@citess{#1}}  
7 }{}
```

For the [super] option, \textsuperscript is used instead of math superscript:

```
8 \def\@citess#1{\textsuperscript{#1}}  
9  
10 \DeclareDocumentCommand\citempunct{}{\relax}
```

File 77 l warp-CJK.sty**§ 175 Package CJK**

Pkg CJK CJK does not work with l warp unless called from ctex.

for HTML output:

```
1 \@ifpackageloaded{xeCJK}{}{  
2     \LWR@loadnever{CJK}{ctex, xeCJK}  
3 }  
4  
5 \LWR@ProvidesPackagePass{CJK}[2015/04/18]
```

File 78 l warp-CJKutf8.sty**§ 176 Package CJKutf8**

Pkg CJKutf8 CJKutf8 does not work with l warp unless called from ctex.

for HTML output:

```
1 \@ifpackageloaded{xeCJK}{}{  
2     \LWR@loadnever{CJKutf8}{ctex, xeCJK}  
3 }  
4  
5 \LWR@ProvidesPackagePass{CJKutf8}[2015/04/18]
```

File 79 l warp-clrdblpq.sty**§ 177 Package clrdblpq**

Pkg clrdblpq clrdblpq is ignored.

for HTML output:

```
1 \LWR@ProvidesPackageDrop{clrdblpq}[2018/04/21]
```

File 80 l warp-cmdtrack.sty**§ 178 Package cmdtrack**

Pkg cmdtrack cmdtrack is ignored.

for HTML output:

```
1 \LWR@ProvidesPackageDrop{cmdtrack}[2012/12/18]  
2 \newcommand{\untrack}[1]{}
```

File 81 l warp-color.sty**§ 179 Package color**

Pkg color Allowed but ignored. xcolor is then required as well.

color is superceded by xcolor, and l warp requires several of the features of xcolor. When color is requested, xcolor is loaded as well.

for HTML output:
1 \LWR@ProvidesPackageDrop{color}[2016/07/10]
2 \RequirePackage{xcolor}

File 82 l warp-colortbl.sty**§ 180 Package colortbl**

Pkg colortbl colortbl is used as-is for print output, and emulated for HTML.

⚠ row/cell color Only use \rowcolor and \cellcolor at the start of a row, in that order.
colortbl ignores the overhang arguments.

for HTML output: A placeholder definition is forgotten first:

1 \let\rowcolor\relax
2
3 \LWR@ProvidesPackagePass{colortbl}[2018/12/12]

The following \LWR@HTML versions are used inside an HTML tabular.

\columncolor [*<model>*] {*<color>*} [*<left overhang>*] [*<right overhang>*]
\LWR@getmynexttoken is not used here because \columncolor is not used inside the data area of the tabular.
4 \NewDocumentCommand{\LWR@HTML@columncolor}{O{named} m o o}{%
5 \convertcolorspec{#1}{#2}{HTML}\LWR@columnHTMLcolor%
6 \LWR@addtabularcellcolor%
7 }
8
9 \AtBeginDocument{\LWR@formatted{columncolor}}

\LWR@getmynexttoken is used for \rowcolor because it is used inside the data area of the tabular.

\rowcolor [*<model>*] {*<color>*} [*<left overhang>*] [*<right overhang>*]
10 \NewDocumentCommand{\LWR@HTML@rowcolor}{O{named} m o o}{%
11 \convertcolorspec{#1}{#2}{HTML}\LWR@rowHTMLcolor%

```

18 \LWR@addtabularcellcolor%
19 }
20
21 \AtBeginDocument{\LWR@formatted{cellcolor}}
```

\arrayrulecolor [*model*] {*color*}

The HTML version for use outside a tabular. Inside a tabular, \LWR@HTML@arrayrulecolornexttoken is used instead.

```
22 \newcommand{\LWR@HTML@arrayrulecolor}[2][named]{%
23 \convertcolorspec{#1}{#2}{HTML}\LWR@ruleHTMLcolor%
24 }
25
26 \AtBeginDocument{\LWR@expandableformatted{arrayrulecolor}}
```

[*model*] {*color*}

The HTML version for use inside a tabular.

```
27 \newcommand{\LWR@HTML@arrayrulecolornexttoken}[2][named]{%
28 \convertcolorspec{#1}{#2}{HTML}\LWR@ruleHTMLcolor%
29 \LWR@getmynexttoken%
30 }
31
32 \AtBeginDocument{\LWR@expandableformatted{arrayrulecolornexttoken}}
```

\doublerulesepcolor [*model*] {*color*}

The version for use outside a tabular.

```
33 \newcommand{\LWR@HTML@doublerulesepcolor}[2][named]{}%
34
35 \AtBeginDocument{\LWR@expandableformatted{doublerulesepcolor}}
```

[*model*] {*color*}

The version for use inside a tabular.

```
36 \newcommand{\LWR@HTML@doublerulesepcolornexttoken}[2][named]{\LWR@getmynexttoken}%
37
38 \AtBeginDocument{\LWR@expandableformatted{doublerulesepcolornexttoken}}
```

File 83 l warp-continue.sty**§ 181 Package continue**

Pkg **continue** **continue** is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{continue}[2018/12/09]

```
2 \newcommand*\{\flagcont\}{}  
3 \newcommand*\{\flagend\}{}  
4 \newcommand*\{\flagword\}{}  
5 \newcommand*\{\prefFlagword\}{}  
6 \newcommand*\{\postFlagword\}{}  
7 \newlength\contsep  
8 \newlength\contdrop
```

File 84 l warp-copyrightbox.sty**§ 182 Package copyrightbox**

(Emulates or patches code by THOMAS FISCHER, IVES VAN DER FLAAS.)

Pkg **copyrightbox** **copyrightbox** is emulated for use by **l warp**.

The entire copyright box is placed inside a <div> of class **copyrightbox**.

The contents are placed inside a <div> of class **copyrightboxcontents**.

The copyright notice is placed inside a <div> of class **copyrightboxnote**.

for HTML output: 1 \LWR@ProvidesPackageDrop{copyrightbox}[2011/11/27]

```
2 \newcommand{\copyrightbox}[3][r]{%  
3 \begin{BlockClass}[  
4 display: inline-flex;

11 \def\makeenmark{\@makeenmark}

```

File 107 l warp-enumerate.sty**§ 205 Package enumerate**

Pkg **enumerate** **enumerate** is supported with no changes.

This package is only required because it was used in the past to drop and then emulate the package. It cannot be removed because an older version which dropped the package may still remain, for example in a local vs. distribution directory, but it is now supported directly by **l warp** and thus must no longer be dropped.

for HTML output: 1 \LWR@ProvidesPackagePass{enumerate}[2015/07/23]

File 108 l warp-enumitem.sty**§ 206 Package enumitem**

(Emulates or patches code by JAVIER BEZOS.)

Pkg **enumitem** **enumitem** is supported with minor adjustments.

for HTML output: 1 \LWR@ProvidesPackagePass{enumitem}[2018/11/30]

for HTML output: 2 \begin{warpHTML}

```
\newlist {\name} {\type} {\maxdepth}
\renewlist {\name} {\type} {\maxdepth}
```

For **enumitem** lists, new lists must have the start and end actions assigned to the new environment. Renewed lists already have their actions assigned, and thus need no changes.

```
3 \let\lWR@enumitem@orignewlist\newlist
4
5 \renewcommand*{\newlist}[3]{%
6 \lWR@enumitem@orignewlist[#1]{#2}{#3}%
7 \AtBeginEnvironment{#1}{\@nameuse{\lWR@#2start}}%
8 \AtEndEnvironment{#1}{\@nameuse{\lWR@#2end}}%
9 }
10
11 \def\DrawEnumitemLabel{}  

12 \end{warpHTML}
```

File 109 l warp-epigraph.sty

§ 207 Package **epigraph**

(Emulates or patches code by PETER WILSON.)

Pkg epigraph epigraph is emulated.

for HTML output:

```
1 \LWR@ProvidesPackageDrop{epigraph}[2009/09/02]

2 \DeclareDocumentCommand{\qitem}{m m}
3 {
4 \begin{BlockClass}{qitem}
5 #1
6 \LWR@stoppars%
7 \ifbool{FormatWP}
8 {\begin{BlockClass}[border-top:1px solid gray]{epigraphsource}}
9 {\begin{BlockClass}{epigraphsource}}
10 #2
11 \end{BlockClass}
12 \end{BlockClass}
13 }

14 \DeclareDocumentCommand{\epigraph}{m m}
15 {
16 \begin{LWR@BlockClassWP}{\LWR@print@mbox{text-align:right}}{}{epigraph}
17 \qitem[#1]{#2}
18 \end{LWR@BlockClassWP}
19 }
20
21 \DeclareDocumentEnvironment{epigraphs}{}
22 {\LWR@BlockClassWP{\LWR@print@mbox{text-align:right}}{}{epigraph}}
23 {\endLWR@BlockClassWP}
```

Use css to format epigraphs.

The following are null commands for source compatibility:

```
24 \newenvironment*{\flushepinormal}{}{}

25 \@ifclassloaded{memoir}{
26 \setlength{\epigraphwidth}{.5\linewidth}
27 \renewcommand{\textflush}{flushepinormal}
28 \renewcommand{\epigraphhead}[2][0]{#2}
29 \renewcommand{\dropchapter}[1]{}
30 \renewcommand*{\undodrop}{}
31 }{% not memoir
32 \newlength{\epigraphwidth}
33 \setlength{\epigraphwidth}{.5\linewidth}
```

```

34 \newcommand{\textflush}{flushleft}
35 \newcommand{\epigraphflush}{flushright}
36 \newcommand{\sourceflush}{flushright}
37 \newcommand*\epigraphsize{\small}
38 \newlength{\epigraphrule}
39 \newlength{\beforeepigraphskip}
40 \newlength{\afterepigraphskip}
41 \newcommand{\epigraphhead}[2][0]{#2}
42 \newcommand{\dropchapter}[1]{}
43 \newcommand*\undodrop(){}
44 }% not memoir
45
46 \let\cleartoevenpage\relax% also in nextpage
47 \newcommand{\cleartoevenpage}[1][]{}

```

File 110 **l warp-epsfig.sty**

§ 208 Package **epsfig**

Pkg **epsfig** **epsfig** is emulated for use by **l warp**.

 Only the L^AT_EX2e syntax is emulated.

for HTML output: 1 \LWR@ProvidesPackageDrop{epsfig}[2017/06/25]

A few additional keys to capture the filename:

```

2 \RequirePackage{graphics}
3
4 \define@key{igraph}{file}{%
5   \xdef\LWR@epsfig@filename{\#1}%
6 }
7
8 \define@key{igraph}{figure}{%
9   \xdef\LWR@epsfig@filename{\#1}%
10 }
11
12 \define@key{igraph}{prolog}{}
13
14 \define@key{igraph}{silent}{}[]

```

The captured filename is used as the argument to **\includegraphics**:

```

15 \newcommand{\epsfig}[1]{\includegraphics[\#1]{\LWR@epsfig@filename}}
16
17 \newcommand{\psfig}[1]{\includegraphics[\#1]{\LWR@epsfig@filename}}

```

File 111 l warp-epstopdf.sty**§ 209 Package epstopdf**

Pkg epstopdf Previous versions of l warp had a nullfied version, but now epstopdf-base is supported. l warp-epstopdf becomes a placeholder to overwrite previous versions.

See package epstopdf-base for details.

for HTML output: 1 \LWR@ProvidesPackagePass{epstopdf}[2016/05/15]

File 112 l warp-epstopdf-base.sty**§ 210 Package epstopdf-base**

Pkg epstopdf-base

⚠ convert to .svg Images with an .eps extension will be converted to .pdf. The HTML output uses the .svg version, so use

Enter ⇒ **l warpmk pdftosvg <listofPDFfiles>**

to generate .svg versions.

for HTML output: 1 \LWR@ProvidesPackagePass{epstopdf-base}[2016/05/15]

Redefine to remember the image filename, replacing .pdf with .svg. Use the epstopdf print version inside a lateximage.

```
2 \newcommand*{\LWR@HTML@ETE@OrgGin@setfile}[3]{%
3     \edef\LWR@tempone{\#3}%
4     \StrSubstitute{\LWR@tempone}{.pdf}{.svg}[\LWR@tempone]%
5     \StrSubstitute{\LWR@tempone}{.PDF}{.SVG}[\LWR@tempone]%
6     \xdef\LWR@parsedfilename{\LWR@tempone}%
7 }
8
9 \LWR@formatted{ETE@OrgGin@setfile}
```

\includegraphics in HTML mode redefines \Gin@setfile to be \LWR@HTML@Gin@setfile, which is now redirected to epstopdf's version:

```
10 \renewcommand*{\LWR@HTML@Gin@setfile}[3]{%
11     \ETE@Gin@setfile{\#1}{\#2}{\#3}%
12 }
```

Allow .eps images to be found if a suffix is not provided:

```

13 \AtBeginDocument{
14 \DeclareGraphicsExtensions{%
15   .eps,.EPS,.svg,.SVG,.gif,.GIF,.png,.PNG,.jpg,.JPG,.jpeg,.JPEG%
16 }
17 \DeclareGraphicsRule{.svg}{svg}{.svg}{}
18 \DeclareGraphicsRule{.SVG}{svg}{.SVG}{}
19 }
```

Likewise when inside a `lateximage`:

```

20 \appto\LWR@restoreorigformatting{%
21 \DeclareGraphicsExtensions{%
22   .eps,.EPS,.pdf,.PDF,.gif,.GIF,.png,.PNG,.jpg,.JPG,.jpeg,.JPEG%
23 }%
24 }
```

File 113 **l warp-eqlist.sty**

§ 211 Package **eqlist**

Pkg **eqlist** **eqlist** is emulated.

for HTML output: 1 \LWR@ProvidesPackageDrop{eqlist}[2002/08/15]

```

2 \newenvironment{eqlist}[1][] {\description}{\enddescription}
3 \newenvironment{eqlist*}[1][] {\description}{\enddescription}
4 \newenvironment{EqList}[2][] {\description}{\enddescription}
5 \newenvironment{EqList*}[2][] {\description}{\enddescription}

25 }%
26 {%
27   \endminipage%
28   \endgroup%
29 }
30
31 \newcommand*{\LWR@HTML@eqboxwidth}[1]{.25\linewidth}
32 \LWR@formatted{eqboxwidth}
33
34 \newcommand*{\LWR@HTML@eqsetminwidth}[2]{}
35 \newcommand*{\LWR@HTML@eqsetmaxwidth}[2]{}
36
37 \newcommand*{\LWR@HTML@eqsetminwidthto}[2]{}
38 \newcommand*{\LWR@HTML@eqsetmaxwidthto}[2]{}

```

File 115 **l warp-errata.sty**

§ 213 Package **errata**

(Emulates or patches code by MICHAEL KOHLHASE.)

Pkg errata errata is patched for use by l warp.

This is for v0.3 of errata. A newer version of errata with more features is under development, at which time the l warp version will have to be updated.

for HTML output: Macros are being defined with the math dollar, so enable the HTML version during package loading:

1 \StartDefiningMath

Now load the package:

2 \LWR@ProvidesPackagePass{errata}[2006/11/12]

Patches for dynamic inline math:

```

3 \xpatchcmd{\erratumAdd}
4   {$_a^{\arabic{erratum}}$}
5 %   {\inlinemathother$_a^{\arabic{erratum}}$\inlinemathnormal}
6   {\textsubscript{a}\textsuperscript{\arabic{erratum}}}
7   {}
8   {\LWR@patcherror{erratum}{erratumAdd}}
9
10 \xpatchcmd{\erratumDelete}
11   {$_d^{\arabic{erratum}}$}
12 %   {\inlinemathother$_d^{\arabic{erratum}}$\inlinemathnormal}
13   {\textsubscript{d}\textsuperscript{\arabic{erratum}}}
14   {}
15   {\LWR@patcherror{erratum}{erratumDelete}}
16
17 \xpatchcmd{\erratumReplace}
18   {$_r^{\arabic{erratum}}$}
19 %   {\inlinemathother$_r^{\arabic{erratum}}$\inlinemathnormal}
20   {\textsubscript{r}\textsuperscript{\arabic{erratum}}}
21   {}
22   {\LWR@patcherror{erratum}{erratumReplace}}
23
24 \xpatchcmd{\erratum}
25   {$_a$}
26 %   {\inlinemathother$_a$\inlinemathnormal}
27   {\textsubscript{a}}
28   {}
29   {\LWR@patcherror{erratum}{erratumDelete}}
30
31 \xpatchcmd{\erratum}
32   {$_d^{\@thefnmark}$}
33 %   {\inlinemathother$_d^{\@thefnmark} $\inlinemathnormal}
34   {\textsubscript{d}\textsuperscript{\@thefnmark}}
35   {}
36   {\LWR@patcherror{erratum}{eDelete}}
37
38 \xpatchcmd{\erratum}
39   {$_r^{\@thefnmark}$}
40 %   {\inlinemathother$_r^{\@thefnmark} $\inlinemathnormal}
41   {\textsubscript{r}\textsuperscript{\@thefnmark}}
42   {}
43   {\LWR@patcherror{erratum}{eReplace}}

```

Finish the current page's errata before closing and reloading the list:

44 \preto\PrintErrata{\LWR@orignewpage}

No longer defining math macros with the HTML \$:

45 \StopDefiningMath

File 121 **lwarp-fancybox.sty**

§ 219 Package **fancybox**

(Emulates or patches code by TIMOTHY VAN ZANDT.)

Pkg **fancybox** **fancybox** is supported with some patches.

framed equation example **fancybox**'s documentation has an example `FramedEqn` environment which combines `\Sbox`, a `minipage`, and an `\fbox`. This combination requires that the entire environment be enclosed inside a `\latextimage`, which is done by adding `\latextimage` at the very start of `FramedEqn`'s beginning code, and `\endlatextimage` at the very end of the ending code. Unfortunately, the `HTML alt` attribute is not used here.

```

\newenvironment{FramedEqn}
{
  \latextimage% NEW
  \setlength{\fboxsep}{15pt}
  . . .
  \[\fbox{\TheSbox}\]
  \endlatextimage% NEW
}

```

framing alternatives `\fbox` works with **fancybox**. Also see **lwarp**'s `\fboxBlock` macro and `fminipage` environment for alternatives to `\fbox` for framing environments.

framed table example The **fancybox** documentation's example framed table using an `\fbox` containing a `tabular` does not work with **lwarp**, but the `FramedTable` environment does work if `\fbox` is replaced by `\fboxBlock`. This method loses `HTML` formatting. A better method is to enclose the table's contents inside a `fminipage` environment. The caption may be placed either inside or outside the `fminipage`:

```

\begin{table}
\begin{fminipage}{\linewidth}
\begin{tabular}{lr}
. .
\end{tabular}
\end{fminipage}
\end{table}

```

⚠ **framed verbatim** **lwarp** does not support the `verbatim` environment inside a `span`, `box`, or **fancybox**'s

\Sbox, but a `verbatim` may be placed inside a `fminipage`. The `fancybox` documentation's example `FramedVerb` may be defined as:

```
\newenvironment{FramedVerb}[1] % width
{
  \VerbatimEnvironment
  \fminipage{#1}
  \begin{Verbatim}
}{%
  \end{Verbatim}
  \endfminipage
}
```

`framed \VerbBox` `fancybox`'s `\VerbBox` may be used inside `\fbox`.

`indented alignment` `\LVerbatim`, `\LVerbatimInput`, and `\LUseVerbatim` indent with horizontal space which may not line up exactly with what `pdftotext` detects. Some lines may be off slightly in their left edge.

`fancybox, fancyvrb` If using `fancybox` or `fancyvrb` with `\VerbatimFootnotes`, and using footnotes in a sectioning command or display math, use `\footnotemark` and `\footnotetext`:

 `\subsection[Subsection Name]{Subsection Name\protect\footnotemark}\footnotetext{A footnote with \verb+verbtim+.}`

and likewise for equations or display math.

At present there is a bug such that paragraph closing tags are not present in footnotes when `\VerbatimFootnotes` are selected. The browser usually compensates.

1 `\LWR@ProvidesPackagePass{fancybox}[2010/05/15]`

After the preamble is loaded, after any patches to `Verbatim`:

2 `\AfterEndPreamble{`
3 `\LWR@traceinfo{Patching fancybox.}`

`\VerbatimFootnotes` Patched to use the new version.

4 `\def\VerbatimFootnotes{%`
5 `\let\@footnotetext\@footnotetext%`
6 `\let\LWR@footnotetext\@footnotetext% lwarp`
7 `}`

`\V@footnotetext` Patches in a subset of `lwarp`'s `\LWR@footnotetext` to the `fancyvrb` version of `\V@footnotetext`.

8 `\def\V@footnotetext{%`
9 `\LWR@traceinfo{\V@footnotetext}%`
10 `\global\setbox\LWR@footnotebox=\vbox\bgroup%`

Add to any current footnotes:

11 `\unvbox\LWR@footnotebox%`

Remember the footnote number for \ref:

```
12 \protected@edef\@currentlabel{%
13   \csname p@footnote\endcsname\@thefnmark%
14 }% @currentlabel
```

Use HTML superscripts in the footnote even inside a \teximage:

```
15 \renewrobustcmd{\textsuperscript}[1]{\LWR@htmlspan{sup}{##1}}%
```

Use paragraph tags if in a tabular data cell or a \teximage:

```
16 \ifthenelse{%
17   \boolean{LWR@doingstartpars} \AND%
18   \cnttest{\value{LWR@lateximagedepth}}{=}{0}%
19 }%
20 {}%
21 {\LWR@htmltagc{\LWR@tagregularparagraph}\LWR@orignewline}%
```

Append the footnote to the list:

```
22 \@makefnlist{}%
```

The footnote text will follow after \V@@@footnotetext has completed.

```
23 \bgroup%
24 \aftergroup{\V@@@footnotetext}%
25 \ignorespaces%
26 }%

27 }% AfterEndPreamble

28 \renewcommand*{\@shadowbox}[1]{%
29 \ifbool{FormatWP}{%
30 {\InlineClass[border:1px solid black]{shadowbox}{#1}}%
31 {\InlineClass{shadowbox}{#1}}%
32 }%
33
34 \renewcommand*{\@doublebox}[1]{%
35 \ifbool{FormatWP}{%
36 {\InlineClass[border:1px double black]{doublebox}{#1}}%
37 {\InlineClass{doublebox}{#1}}%
38 }%
39
40 \renewcommand*{\@ovalbox}[2]{%
41 \ifbool{FormatWP}{%
42 {\InlineClass[border:1px solid black; border-radius:1ex]{ovalbox}{#2}}%
43 {%
44   \ifthenelse{\isequivalentto{#1}{\thinlines}}{%
45     {\InlineClass{ovalbox}{#2}}%
46     {\InlineClass{Ovalbox}{#2}}%
47 }%
48 }%
```

Convert minipages, parboxes, and lists into linear text using the \LWR@nestspan environment:

```
49 \let\LWR@origSbox\Sbox
```

```

50
51 \def\Sbox{\LWR@origSbox\LWR@nestspan}
52
53
54 \let\LWR@origendSbox\endSbox
55
56 \def\endSbox{\endLWR@nestspan\LWR@origendSbox}

```

`Beqnarray` is adapted for `MATHJAX` or enclosed inside a `lateximage`:

```

57 \RenewEnviron{Beqnarray}{%
58 {\LWR@eqnarrayfactor}%
59 %
60 \csgpreto{Beqnarray*}{\boolfalse{\LWR@numbereqnarray}}}

```

`\GenericCaption` is enclosed in an `HTML` block:

```

61 \renewcommand{\GenericCaption}[1]{%
62 \LWR@figcaption%
63 \LWR@isolate{\#1}%
64 \endLWR@figcaption%
65 }

```

`Btrivlist` is enclosed in an `HTML` block. This is a tabular, and does not use `\item`.

```

\trivlist {\langle l/c/r\rangle} [\langle t/c/b\rangle]
66 \RenewDocumentEnvironment{Btrivlist}{m o}
67 {%
68   \LWR@stoppars%
69   \begin{BlockClass}{Btrivlist}%
70   \tabular{\#1}%
71 }
72 {%
73   \endtabular%
74   \end{BlockClass}%
75   \LWR@startpars%
76 }

```

`Btrivlist` is also neutralized when used inside a span:

```

77 \AtBeginEnvironment{\LWR@nestspan}{%
78 \RenewDocumentEnvironment{Btrivlist}{m o}{}{}%
79 }

```

`lwarp`'s handling of `\item` is patched to accept `fancybox`'s optional arguments:

```

80 \let\LWRFB@origitemizeitem\LWR@itemizeitem
81 \let\LWRFB@origdescitem\LWR@descitem
82
83 \RenewDocumentCommand{\LWR@itemizeitem}{d()o}{%
84   \IfValueTF{\#2}{%
85     \LWRFB@origitemizeitem[\#2]%

```

```

86      }{%
87          \LWRFB@origitemizeitem%
88      }%
89 }
90
91 \RenewDocumentCommand{\LWR@descitem}{d()o}{%
92     \IfValueTF{#2}{%
93         \LWRFB@origdescitem[#2]~%
94     }{%
95         \LWRFB@origdescitem%
96     }%
97 }

98 \RenewDocumentCommand{\LWR@nestspanitem}{d()}{%
99 \if@newlist\else{\LWR@htmltagc{br /}}\fi%
100 \LWR@origitem%
101 }

```

The various boxed lists become regular lists:

```

102 \renewenvironment{Bitemize}[1][]{{\begin{itemize}}}{\end{itemize}}
103 \renewenvironment{B enumerate}[1][]{{\begin{enumerate}}}{\end{enumerate}}
104 \renewenvironment{B description}[1][]{{\begin{description}}}{\end{description}}

```

\boxput simply prints one then the other argument, side-by-side instead of above and behind:

```

105 \RenewDocumentCommand{\boxput}{s d() m m}{%
106 \IfBooleanTF{#1}{#3\quad#4}{#4\quad#3}%
107 }

```

Neutralized commands:

```

108 \RenewDocumentCommand{\fancyput}{s d() m}{}
109 \RenewDocumentCommand{\thisfancyput}{s d() m}{}
110
111 \RenewDocumentCommand{\fancypage}{m m}{}
112 \RenewDocumentCommand{\thisfancypage}{m m}{}
113
114 \def\LandScape#1{}
115 \def\endLandScape{}
116 \def\@Landscape#1#2#3{}
117 \def\endLandscape{}

```

Low-level patches for `UseVerbatim` and friends:

```

118 \let\LWRFB@UseVerbatim\UseVerbatim
119 \renewcommand*\UseVerbatim[1]{%
120 \LWR@atbeginverbatim{#3}{\Verbatim}%
121 \LWRFB@UseVerbatim{#1}%
122 \LWR@afterendverbatim{.5}%
123 }

```

```
124  
125 \let\LWRFB@LUseVerbatim\LUseVerbatim  
126  
127 \renewcommand*{\LUseVerbatim}[1]{%  
128 \LWR@atbeginverbatim{3}{LVerbatim} %  
129 \noindent%  
130 \LWRFB@LUseVerbatim{#1} %  
131 \LWR@afterendverbatim{.5} %  
132 }  
133  
134 \def\@BUseVerbatim[#1]#2{ %  
135 \LWR@atbeginverbatim{3}{BVerbatim} %  
136 \LWRFB@UseVerbatim{#2} %  
137 \LWR@afterendverbatim{.5} %  
138 }
```

File 122 *l warp-fancyhdr.sty***§ 220 Package *fancyhdr***

(Emulates or patches code by PIET VAN OOSTRUM.)

Pkg *fancyhdr* *fancyhdr* is ignored.

File 125 **l warp-fancyvrb.sty**

§ 223 Package **fancyvrb**

(Emulates or patches code by TIMOTHY VAN ZANDT.)

Pkg fancyvrb fancyvrb is supported with some patches.

HTML classes The fancy verbatim environment is placed inside a <div> of class fancyvrb. The label is placed inside a <div> of class fancyvrblabel. The verbatim text itself is placed inside a <div> of class verbatim.

If using **fancybox** or **fancyvrb** with \VerbatimFootnotes, and using footnotes in a sectioning command or display math, use \footnotemark and \footnotetext:

\footnotemark {A footnote with \verb+verbatim+.
\footnotetext {A footnote with \verb+verbatim+.

and likewise for equations or display math.

At present there is a bug such that paragraph closing tags are not present in footnotes when \VerbatimFootnotes are selected. The browser usually compensates.

1 \RequirePackage{xcolor} % for \convertcolorspec

\VerbatimFootnotes

⚠ sectioning or
displaymath

```

2
3 \LWR@ProvidesPackagePass{fancyvrb}[2008/02/07]

```

Initial default patch for fancyvrb:

```

4 \fvset{frame=none}%

```

After the preamble is loaded, after any patches to Verbatim:

```

5 \AfterEndPreamble{
6 \LWR@traceinfo{Patching fancyvrb.}

```

\VerbatimFootnotes Patched to use the new version.

```

7 \def\VerbatimFootnotes{%
8 \let\@footnotetext\V@footnotetext%
9 \let\footnote\V@footnote%
10 \let\LWR@footnotetext\V@footnotetext% lwarp
11 }

```

\V@footnotetext Patches in a subset of lwarp's \LWR@footnotetext to the fancyvrb version of \V@footnotetext.

```

12 \def\V@footnotetext{%
13 \LWR@traceinfo{\V@footnotetext}%
14 \global\setbox\LWR@footnotebox=\vbox\bgroup%

```

Add to any current footnotes:

```

15 \unvbox\LWR@footnotebox%

```

Remember the footnote number for \ref:

```

16 \protected@edef\@currentlabel{%
17     \csname p@footnote\endcsname\@thefnmark%
18 }% @currentlabel

```

Use HTML superscripts in the footnote even inside a lateximage:

```

19 \renewrobustcmd{\textsuperscript}[1]{\LWR@htmlspan{sup}{##1}}%

```

Use paragraph tags if in a tabular data cell or a lateximage:

```

20 \ifthenelse{%
21     \boolean{\LWR@doingstartpars} \AND%
22     \cnttest{\value{\LWR@lateximagedepth}}{=}{0}%
23 }%
24 {}%
25 {\LWR@htmltagc{\LWR@tagregularparagraph}\LWR@newline}%

```

Append the footnote mark to the list:

```

26 \makefnlist{}%

```

The footnote text will follow after \V@footnotetext has completed.

```

27 \bgroup%
28 \aftergroup{\V@footnotetext}%
29 \ignorespaces%
30 }%

```

```

31 \preto\FVB@Verbatim{\LWR@forcenewpage}
32 \preto\FLV@LVerbatim{\LWR@forcenewpage}
33 % \preto\FLV@BVerbatim{\LWR@forcenewpage}% Fails, so done below.

```

Simplified to remove PDF formatting:

```

34 \def\FV@BeginListFrame@Single{%
35   \FV@SingleFrameLine{\z@}%
36 }
37
38 \def\FV@EndListFrame@Single{%
39   \FV@SingleFrameLine{\@ne}%
40 }
41

Pkg fix2col fix2col is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{fix2col}[2015/11/13]

File 130 **l warp-fixme.sty**

§ 228 Package **fixme**

(Emulates or patches code by DIDIER VERNA.)

Pkg fixme fixme is patched for use by l warp.

⚠ external layouts External layouts (\fxloadlayouts) are not supported.

User control is provided for setting the HTML styling of the “faces”. The defaults are as follows, and may be changed in the preamble after fixme is loaded:

```

\def\FXFaceInlineHTMLStyle{font-weight:bold}
\def\FXFaceEnvHTMLStyle{font-weight:bold}
\def\FXFaceSignatureHTMLStyle{font-style:italic}
\def\FXFaceTargetHTMLStyle{font-style:italic}

```

for HTML output: 1 \LWR@ProvidesPackagePass{fixme}[2017/03/05]

Restore l warp’s version of \@wrindex, ignoring the fixme package’s target option:

```
2 \let\@wrindex\LWR@wrindex
```

Float-related macros required by l warp:

```

3 \newcommand{\ext@fixme}{lox}
4
5 \renewcommand{\l@fixme}[2]{\hypertocfloat{1}{fixme}{lox}{#1}{#2}}

```

Other modifications:

```
6 \def\FXFaceInlineHTMLStyle{font-weight:bold}
```

```

7

File 132 l warp-flafter.sty**§ 230 Package flafter**

Pkg flafter flafter is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{flafter}[2018/01/08]
2 \providecommand\fl@trace[1]{}

File 133 l warp-flippdf.sty**§ 231 Package flippdf**

Pkg flippdf flippdf is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{flippdf}[2006/06/30]
2 \newcommand\FlipPDF{}
3 \newcommand\UnFlipPDF{}

File 134 l warp-float.sty**§ 232 Package float**

(Emulates or patches code by ANSELM LINGNAU.)

Pkg float float is emulated.

Float styles boxed and ruled are emulated by css and a float class according to style.

The HTML <figure> class is set to the float type, so css may also be used to format the float and its caption, according to float type. Furthermore, an additional class is set to the float style: plain, plaintop, boxed, or ruled, so css may be used to format by float style as well. Default formatting by css is provided for ruled and boxed styles.

for HTML output: 1 \LWR@ProvidesPackageDrop{float}[2001/11/08]

\listof See section 75.2 for the \listof command.

\LWR@floatstyle The default float style:

```
2 \newcommand*\LWR@floatstyle{plain}
```

\newfloat {<1: type>} {<2: placement>} {<3: ext>} [<4: within>]

Emulates the \newfloat command from the float package.
“placement” is ignored.

```
3 \NewDocumentCommand{\newfloat}{m m m o}{%
4 \IfValueTF{#4}{%
5 {\DeclareFloatingEnvironment[fileext=#3,within=#4]{#1}}{%
6 {\DeclareFloatingEnvironment[fileext=#3]{#1}}{}}
```

Remember the float style:

```
7 \csedef{\LWR@floatstyle@#1}{\LWR@floatstyle}{%
```

newfloat package automatically creates the \listof command for new floats, but **float** does not, so remove \listof here in case it is manually created later.

```
8 \cslet{\listof#1s}\relax%
9 \cslet{\listof#1es}\relax%
```

Likesize, **newfloat** also creates \l@<type>, but **float** does not, so remove it here:

```
10 \cslet{\l@#1}\relax%
11 }
```

\floatname {<type>} {<name>}

Sets the text name of the float, such as “Figure”.

```
12 \NewDocumentCommand{\floatname}{m +m}{%
13   \SetupFloatingEnvironment{#1}{name=#2}%
14 }
```

\floatplacement {<type>} {<placement>}

Float placement is ignored.

```
15 \newcommand*\floatplacement[2]{%
16   \SetupFloatingEnvironment{#1}{placement=#2}%
17 }
```

\floatstyle {<style>}

Remember the style for future floats:

```
18 \newcommand{\floatstyle}[1]{%
19   \def\LWR@floatstyle{#1}%
20 }
```

```
\restylefloat
```

* {*<type>*}

Remember the style for this float:

```
21 \NewDocumentCommand{\restylefloat}{s m}{%
22     \csedef{LWR@floatstyle@#2}{\LWR@floatstyle}%
23 }
```

File 135 **l warp-floatfl.sty**

§ 233 Package **floatfl**

(Emulates or patches code by MATS DAHLGREN.)

Pkg **floatfl** **floatfl** is emulated.

for HTML output: Discard all options for **l warp-floatfl**:

```
1 \LWR@ProvidesPackageDrop{floatfl}[1997/07/16]
```

Env [⟨⟩] **offset** {⟨*type*⟩} {⟨*width*⟩} Borrowed from the **l warp** version of **keyfloat**:

```
2 \NewDocumentEnvironment{KFLTfloatfl@marginfloat}{O{-1.2ex} m m}%
3 {%
4 \setlength{\LWR@templengthone}{#3}%
5 \LWR@BlockClassWP{%
6     float:right; %

```

File 136 l warp-floatpag.sty**§ 234 Package floatpag**

(Emulates or patches code by VYTAS STATULEVIČIUS AND SIGITAS TOLUŠIS.)

Pkg floatpag floatpag is ignored.

for HTML output Discard all options for l warp-floatpag:

```
1 \LWR@ProvidesPackageDrop{floatpag}[2012/05/29]
```

```
2 \newcommand*{\floatpagestyle}[1]{}
3 \newcommand*{\rotfloatpagestyle}[1]{}
4 \newcommand*{\thisfloatpagestyle}[1]{}
```

File 137 l warp-floatrow.sty**§ 235 Package floatrow**

(Emulates or patches code by OLGA LAPKO.)

Pkg floatrow floatrow is emulated.

for HTML output

```
1 \LWR@ProvidesPackageDrop{floatrow}[2008/08/02]
```

⚠ Misplaced alignment tab character & Use \StartDefiningTabulars and \StopDefiningTabulars before and after defining macros using \ttabbox with a tabular inside. See section 8.10.1.

⚠ subfig package When combined with the subfig package, while inside a subfloatrow \ffigbox and \ttabbox must have the caption in the first of the two of the mandatory arguments.

⚠ \FBwidth, \FBheight The emulation of floatrow does not support \FBwidth or \FBheight. These values are pre-set to .3\linewidth and 2in. Possible solutions include:

- Use fixed lengths. l warp will scale the HTML lengths appropriately.
- Use warpprint and warpHTML environments to select appropriate values for each case.
- Inside a warpHTML environment, manually change \FBwidth or \FBheight before the \ffigbox or \ttabbox. Use \FBwidth or \FBheight normally afterwards; it will be used as expected in print output, and will use your custom-selected value in HTML output. This custom value will be used repeatedly, until it is manually changed to a new value.

After everything has loaded, remember whether subcaption was loaded. If not, it is assumed that subfig is used instead:

```

2 \newbool{LWR@subcaptionloaded}
3
4 \AtBeginDocument{
5 \@ifpackageloaded{subcaption}
6 {\booltrue{LWR@subcaptionloaded}}
7 {\boolfalse{LWR@subcaptionloaded}}
8 }

```

\floatbox [*1 preamble*] [*2 captype*] [*3 width*] [*4 height*] [*5 vert pos*] [*6 caption*] [*7 object*]

Only parameters for captype, width, caption, and object are used.

LWR@insubfloatrow is true if inside a subfloatrow environment.

There are two actions, depending on the use of subcaption or subfig.

```

9 \NewDocumentCommand{\floatbox}{o m o o o +m +m}{%
10 \ifbool{LWR@subcaptionloaded}{%
11 {%

```

For subcaption:

```

12 \ifbool{LWR@insubfloatrow}{%
13 {%

```

subfigure and subtable environments take width as an argument.

```

14 \IfValueTF{#3}{%
15 {%
16 {%
17 }%
18 {%

```

figure and table environments do not take a width argument.

```

19 {%
20 }%
21 #6
22
23 #7

```

End the environments:

```

24 \ifbool{LWR@insubfloatrow}{%
25 {%
26 {%
27 }%
28 {%

```

For subfig:

```

29 \ifbool{LWR@insubfloatrow}{%
30 {%

```

\subfloat is a macro, not an environment.

Package subfig's \subfloat command takes an optional argument which is the caption, but \floatbox argument #6 contains commands to create the caption and label, not the caption itself. Thus, \caption is temporarily disabled to return its own argument without braces.

```

31   \begingroup
32   \let\caption\@firstofone
33   \subfloat[#6]{#7}
34   \endgroup
35 }% subfig in a subfloatrow

```

\floatfoot {*text*}

Places additional text inside a float, inside a css <div> of class floatfoot.

```
128 \NewDocumentCommand{\floatfoot}{s +m}{%
129 \begin{BlockClass}{floatfoot}%
130 #2%
131 \end{BlockClass}%
132 }
```

Used to compute \linewidth.

```
133 \newbool{\LWR@insubfloatrow}%
134 \boolfalse{\LWR@insubfloatrow}
```

```
Env  subfloatrow  [ $\langle num\_floats \rangle$ ]
135 \newenvironment*{subfloatrow}[1][2]
136 {
```

The row of floats is placed into a <div> of class floatrow:

```
137 \LWR@forcenewpage
138 \BlockClass{floatrow}
```

While inside the floatrow, LWR@insubfloatrow is set true, which tells \floatbox to use \subfigure or \subtable.

```
139 \begingroup
140 \booltrue{LWR@insubfloatrow}
141 }
142 {
143 \endgroup
144 \endBlockClass
145 \boolfalse{LWR@insubfloatrow}
146 }
```

5 \newcommand*{\makeFNabove}{}%
```

File 145 **l warp-fontawesome.sty**

§ 243 Package **fontawesome**

(Emulates or patches code by XAVIER DANAUX.)

Pkg fontawesome fontawesome is patched for use by l warp.

Hashed inline images are used, as there may not be Unicode support for all icons.

 **poppler syntax warning** If using pdflATEX, poppler may issue a syntax warning regarding parsing a ligature

component. X_ELATEX or LuaLATEX may be used to avoid this warning.

In the following, the general strategy is to intercept \symbol and embed it inside a `\begin{teximage}`. These changes are done inside a local group.

For pdfLATEX, the alt tag includes the icon (symbol) number. For X_ELATEX and LuaLATEX, the alt tag is generic.

for HTML output:

```
1 \LWR@ProvidesPackagePass{fontawesome}[2016/05/15]

24 \LetLtxMacro\textsw{\LWR@null@textsw}%
25 }
```

File 148 **l warp–fontenc.sty**

§ 246 Package **fontenc**

Pkg fontenc If using pdflATEX, **l warp** used to require **fontenc** be loaded before **l warp**, but now **l warp** itself loads **\fontenc** with T1 encoding, which **l warp** requires. **fontenc** is now allowed to be loaded with another encoding after **l warp**.

l warp–fontenc is no longer necessary, but is still provided to overwrite older versions.

for HTML output: 1 \LWR@ProvidesPackagePass{fontenc}[2017/04/05]

File 149 **l warp–footmisc.sty**

§ 247 Package **footmisc**

(Emulates or patches code by ROBIN FAIRBAIRNS.)

Pkg **footmisc** **footmisc** is emulated.

lwarf incidentally happens to emulate the **stable** option.

```
1 \LWR@ProvidesPackageDrop{footmisc}[2011/06/06]
```

Some nullified commands:

```
2 \newcommand{\footnotelayout}{}%
3 \newcommand{\setfnsymbol}[1]{}%
4 \NewDocumentCommand{\DefineFNsymbols}{s m o m}{}%
5
6 \newdimen\footnotemargin
7 \footnotemargin1.8em\relax
8
9 \newcommand*\hangfootparskip{0.5\baselineskip}
10 \newcommand*\hangfootparindent{0em}%
11
12 \let\pagefootnoterule\footnoterule
13 \let\mpfootnoterule\footnoterule
14 \def\splitfootnoterule{\kern-3\p@\hspace{0pt}\kern2.6\p@}%
15
16 \providecommand*\multiplefootnotemarker{3sp}%
17 \providecommand*\multfootsep{,}
```

Using **cleveref**:

```
18 \providecommand*\footref[1]{\labelcref{#1}}
```

The following work as-is:

```
19 \newcommand\mpfootnotemark{%
20   \@ifnextchar[%%
21     \xmpfootnotemark%
22   {%
23     \stepcounter\mpfn%
24     \protected@edef\@thefnmark{\thempfn}%
25     \footnotemark%
26   }%
27 }
28 \def\xmpfootnotemark[#1]{%
29   \begingroup%
30   \csname c@\mpfn\endcsname #1\relax%
31   \unrestored@protected@edef\@thefnmark{\thempfn}%
32   \endgroup%
33   \footnotemark%
34 }
```

File 150 **lwarf-footnote.sty**

§ 248 Package **footnote**

(Emulates or patches code by MARK WOODING.)

Pkg footnote footnote is used with minor patches.

for HTML output: 1 \LWR@ProvidesPackagePass{footnote}[1997/01/28]

Removed print-version formatting:

```
2 \def\fn@startnote{%
3   \parboxrestore%
4   \protected@edef@\currentlabel{\csname p@\@mpfn\endcsname\@thefnmark}%
5   \color@begingroup% *** conflicts with l warp
6 }
7
8 \%let\fn@endnote\color@endgroup% *** conflicts with l warp
9 \def\fn@endnote{%
10 \LWR@htmltagc{/ \LWR@tagregularparagraph}%
11 \LWR@newline%
12 }
```

Removed print-version formatting:

```
13 \def\fn@startfntext{%
14   \setbox\z@\vbox\bgroup%
15   \fn@startnote%
16   \ignorespaces%
17 }
```

Removed print-version formatting, added closing paragraph tag:

```
18 \def\fn@endfntext{%
19   \LWR@htmltagc{/ \LWR@tagregularparagraph}%
20   \LWR@newline%
21   \egroup%
22   \begingroup%
23   \let\@makefntext\@empty%
24   \let\@finalstrut\@gobble%
25   \LetLtxMacro\@rule\@gobbletwo% *8* also the optional argument?
26   \footnotetext{\unvbox\z@}%
27   \endgroup%
28 }
```

These have been redefined, so re-\let them again:

```
29 \let\endfootnote\fn@endfntext
30 \let\endfootnotetext\endfootnote
```

File 151 l warp-footnotebackref.sty

File 166 l warp-gloss.sty

§ 264 Package **gloss**

(Emulates or patches code by JOSE LUIS DÍAZ, JAVIER BEZOS.)

Pkg gloss **gloss** is patched for use by l warp.

To process the HTML glossary:

```
bibtex <projectname>_html.gls
```

for HTML output: 1 \LWR@ProvidesPackagePass{gloss}[2002/07/26]

\BaseJobname is added to the label in case xr or xr-hyper are used.

```
2 \xpatchcmd{\gls@gloss@iii}{%
3   {\thepage}%
4   {\the\LWR@previousautopagelabel}%
5   {}%
6   {\LWR@patcherror{gloss}{gls@gloss@iii}}%
7 }%
8 \def\gls@page@i#1#2{%
9   \endgroup%
10  \global\@namedef{glsp@#1}{\nameref{\BaseJobname-autopage-#2}}}%
```

File 167 **l warp-glossaries.sty**

§ 265 Package **glossaries**

(Emulates or patches code by NICOLA L.C. TALBOT.)

```
Pkg glossaries
processing glossaries
Opt GlossaryCmd
Default: makeglossaries
Opt [l warpmk] printglossary
Opt [l warpmk] htmlglossary
```

 **makeglossaries** not found

l warpmk has the commands `l warpmk printglossary` and `l warpmk htmlglossary`, which process the glossaries created by the `glossaries` package using that package's `makeglossaries` program.

The shell command to execute is set by the `l warp` option `GlossaryCmd`, which defaults to `makeglossaries`. The print or HTML glossary filename is appended to this command.

In some situations it may be required to modify the default command, such as to add the `perl` command in front:

```
\usepackage[
    GlossaryCmd={perl makeglossaries},
] {l warp}
```

xindy language To set the language to use for processing glossaries with `xindy`:

```
\usepackage[
    GlossaryCmd={makeglossaries -L english},
] {l warp}
```

Other options for `makeglossaries` may be set as well.

placement and toc options

The glossaries may be placed in a numbered or unnumbered section, given a TOC entry, and placed inline or on their own HTML page:

Numbered section, on its own HTML page:

```
\usepackage[xindy,toc,numberedsection=nolabel]{glossaries}
...
\printglossaries
```

Unnumbered section, inline with the current HTML page:

```
\usepackage[xindy,toc]{glossaries}
...
\printglossaries
```

Unnumbered section, on its own HTML page:

```
\usepackage[xindy,toc]{glossaries}
...
\ForceHTMLPage
\printglossaries
```

 **glossary style**

The default `style=item` option for `glossaries` conflicts with `l warp`, so the style is forced to `index` instead.

 **number list** The page number list in the printed form would become `\nameref`s in `HTML`, which could become a very long string if many items are referenced. For now, the number list is simply turned off.

print/HTML versions The print and `HTML` versions of the glossary differ in their internal page numbers. Separate commands for generating print and `HTML` glossaries are used, even though the page number is currently ignored.

```
1 \PassOptionsToPackage{xindy}{glossaries}
2
3 \LWR@ProvidesPackagePass{glossaries}[2018/07/23]
4
5 \setupglossaries{nonumberlist}
6 \setglossarystyle{index}
```

Patched to fix toc pointing to the previous page:

```
7 \renewcommand*{\@p@glossarysection}[2]{%
8   \glsclearpage
9   \phantomsection
10  \ifdefempty\@@glossarysecstar
11  {%
12    \csname\@@glossarysec\endcsname{#2}%
13  }%
14  {%
```

In the original, the `toc` entry was made before the section, thus linking to the `phantomsection` in the printed version, but for `HTML`, this caused the link to point to the page before the glossaries, which could be a different `HTML` file. Here, the `toc` entry is made after the section is created:

```
15   \csname\@@glossarysec\endcsname*{#2}%
16   \@gls@toc{#1}{\@@glossarysec}% Moved after the previous line.
17 }%
18 \@@glossaryseclabel
19 }
```

`lwarp`'s sectioning commands cannot handle robust macros when splitting `HTML` into named filenames. `glossaries` uses `\translate` in sectioning names, and `\translate` is robust and cannot be expanded. The following pre-expands the translations at this moment, making use of `\translatelet`.

```
20 \newcommand*{\LWR@comp@glossaryname}{\translate{Glossary}}
21
22 \ifdefstreq{\glossaryname}{\LWR@comp@glossaryname}{%
23   \translatelet{\LWR@translatetemp}{Glossary}%
24   \edef\glossaryname{\LWR@translatetemp}%
25 }{}%
26
27 \newcommand*{\LWR@comp@acronymname}{\translate{Acronym}}
28
29 \ifdefstreq{\acronymname}{\LWR@comp@acronymname}{%
30   \translatelet{\LWR@translatetemp}{Acronym}%
31   \edef\acronymname{\LWR@translatetemp}%
32 }
```

```

32 }){}
33
34 \newcommand*{\LWR@comp@glssymbolsgroupname}{\translate{Symbols (glossaries)}}
35
36 \ifdefstreq{\glssymbolsgroupname}{\LWR@comp@glssymbolsgroupname}{
37     \translatelet{\LWR@translatetemp}{Symbols (glossaries)}
38     \edef\glssymbolsgroupname{\LWR@translatetemp}
39 }()
40
41 \newcommand*{\LWR@comp@glsnumbersgroupname}{\translate{Numbers (glossaries)}}
42
43 \ifdefstreq{\glsnumbersgroupname}{\LWR@comp@glsnumbersgroupname}{
44     \translatelet{\LWR@translatetemp}{Numbers (glossaries)}
45     \edef\glsnumbersgroupname{\LWR@translatetemp}
46 }()

```

File 168 **l warp-gmeometric.sty**

§ 266 Package **gmeometric**

Pkg gmeometric gmeometric is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{gmeometric}[2008/11/22]

File 169 **l warp-graphics.sty**

§ 267 Package **graphics**

(Emulates or patches code by D. P. CARLISLE.)

Pkg graphics graphics is emulated.

for HTML output: 1 \LWR@ProvidesPackagePass{graphics}[2017/06/25]

§ 267.1 **Graphics extensions**

\DeclareGraphicsExtensions {\langle list\rangle}

\AtBeginDocument allow SVG files instead of PDF:

```

2 \AtBeginDocument{
3 \DeclareGraphicsExtensions{.svg,.SVG,.gif,.GIF,.png,.PNG,.jpg,.JPG,.jpeg,.JPEG}
4 \DeclareGraphicsRule{.svg}{svg}{.svg}{}
5 \DeclareGraphicsRule{.SVG}{svg}{.SVG}{}
6 }

```

Inside a `lateximage`, allow PDF instead of SVG:

```

7 \ifpdf
8 \appto{\LWR@restoreorigformatting}{%

```

```

9 \DeclareGraphicsExtensions{.pdf,.PDF,.gif,.GIF,.png,.PNG,.jpg,.JPG,.jpeg,.JPEG}%
10 }%
11 \else% \ifpdf
12     \ifXeTeX
13 \appto\LWR@restoreorigformatting{%
14 \DeclareGraphicsExtensions{.pdf,.PDF,.gif,.GIF,.png,.PNG,.jpg,.JPG,.jpeg,.JPEG}%
15 }%
16     \else
17 \appto\LWR@restoreorigformatting{%
18 \DeclareGraphicsExtensions{.eps,.EPS,.gif,.GIF,.png,.PNG,.jpg,.JPG,.jpeg,.JPEG}%
19 }%
20     \fi
21 \fi

```

§ 267.2 Length conversions and graphics options

⚠ whitespace A scaled image in L^AT_EX by default takes only as much space on the page as it requires, but HTML browsers use as much space as the original unscaled image would have taken, with the scaled image over- or under-flowing the area.

Used to store the user's selected dimensions and HTML class.

The class defaults to "inlineimage" unless changed by a `class=xyx` option.

```

22 \newlength{\LWR@igwidth}
23 \newlength{\LWR@igheight}
24 \newcommand*{\LWR@igwidthstyle}{}%
25 \newcommand*{\LWR@igheightstyle}{}%
26 \newcommand*{\LWR@igorigin}{}%
27 \newcommand*{\LWR@igangle}{}%
28 \newcommand*{\LWR@igxscale}{1}%
29 \newcommand*{\LWR@igyscale}{1}%
30 \newcommand*{\LWR@igclass}{inlineimage}

31 \newcommand*{\LWR@igalt}{\ImageAltText}

```

Set the actions of each of the key/value combinations for `\includegraphics`. Many are ignored.

If an optional width was given, set an HTML style:

```

32 \define@key{igraph}{width}{%
33 \setlength{\LWR@igwidth}{#1}%
34 \ifthenelse{\lengthtest{\LWR@igwidth > 0pt}}{%
35 {%

```

Default to use the converted fixed length given:

```

36     \renewcommand*{\LWR@igwidthstyle}[width:\LWR@printlength{\LWR@igwidth}]%

```

If ex or em dimensions were given, use those instead:

```

37     \IfEndWith{#1}{ex}%

```

```

38      {\renewcommand*{\LWR@igwidthstyle}{width:#1}}% yes ex
39      {}% not ex
40      \IfEndWith{#1}{em}%
41      {\renewcommand*{\LWR@igwidthstyle}{width:#1}}% yes em
42      {}% not em
43      \IfEndWith{#1}{\%}%
44      {\renewcommand*{\LWR@igwidthstyle}{width:#1}}% yes percent
45      {}% not percent
46      \IfEndWith{#1}{px}%
47      {\renewcommand*{\LWR@igwidthstyle}{width:#1}}% yes px
48      {}% not px
49 }{}% end of length > 0pt
50 }

```

If an optional height was given, set an **HTML** style:

```

51 \define@key{igraph}{height}{%
52 \setlength{\LWR@igheight}{#1}%
53 \ifthenelse{\lengthtest{\LWR@igheight > 0pt}}{%
54 {%

```

Default to use the converted fixed length given:

```

55      \renewcommand*{\LWR@igheightstyle}{%
56      height:\LWR@printlength{\LWR@igheight} % extra space
57      }%

```

If ex or em dimensions were given, use those instead:

```

58      \IfEndWith{#1}{ex}%
59      {\renewcommand*{\LWR@igheightstyle}{height:#1}}% yes ex
60      {}% not ex
61      \IfEndWith{#1}{em}%
62      {\renewcommand*{\LWR@igheightstyle}{height:#1}}% yes em
63      {}% not em
64      \IfEndWith{#1}{\%}%
65      {\renewcommand*{\LWR@igheightstyle}{height:#1}}% yes percent
66      {}% not percent
67      \IfEndWith{#1}{px}%
68      {\renewcommand*{\LWR@igheightstyle}{height:#1}}% yes px
69      {}% not px
70 }{}% end of length > 0pt
71 }

```

Handle **origin** key:

```

72 \define@key{igraph}{origin}[c]{%
73     \renewcommand*{\LWR@igorigin}{#1}%
74 }

```

Handle **angle** key:

```

75 \define@key{igraph}{angle}{\renewcommand*{\LWR@igangle}{#1}}

```

Handle class key:

```
76 \define@key{igraph}{class}{\renewcommand*\LWR@igclass{\#1}}
```

Handle alt key:

```
77 \define@key{igraph}{alt}{\renewcommand*\LWR@igalt{\#1}}
```

It appears that `graphicx` does not have separate keys for `xscale` and `yscale`. `scale` adjusts both at the same time.

```
78 \define@key{igraph}{scale}{%
  \ifthenelse{\equal{\#1}{}}{\% must expand #1
    \PackageWarning{lwarp}{%
      It is recommended to use\MessageBreak
      [width=xx\protect\linewidth]\MessageBreak
      instead of [scale=yy],%
    }%
  }%
  \renewcommand*\LWR@igxscale{\#1}%
  \renewcommand*\LWR@igyscale{\#1}%
}
```

Numerous ignored keys:

```
89 \define@key{igraph}{bb}{}%
90 \define@key{igraph}{bbllx}{}%
91 \define@key{igraph}{bbly}{}%
92 \define@key{igraph}{bburx}{}%
93 \define@key{igraph}{bbury}{}%
94 \define@key{igraph}{natwidth}{}%
95 \define@key{igraph}{natheight}{}%
96 \define@key{igraph}{hiresbb}[true]{}%
97 \define@key{igraph}{viewport}{}%
98 \define@key{igraph}{trim}{}%
99 \define@key{igraph}{totalheight}{}%
100 \define@key{igraph}{keepaspectratio}[true]{}%
101 \define@key{igraph}{clip}[true]{}%
102 \define@key{igraph}{draft}[true]{}%
103 \define@key{igraph}{type}{}%
104 \define@key{igraph}{ext}{}%
105 \define@key{igraph}{read}{}%
106 \define@key{igraph}{command}{}%
```

New in v1.1a:

```
107 \define@key{igraph}{quite}{}%
108 \define@key{igraph}{page}{}%
109 \define@key{igraph}{pagebox}{}%
110 \define@key{igraph}{interpolate}[true]{}%
```

New in v1.1b:

```
111 \define@key{igraph}{decodearray}{}%
```

§ 267.3 Printing HTML styles

\LWR@rotstyle {*prefix*} {*degrees*}

Prints the rotate style with the given prefix.

prefix is -ms- or -webkit- or nothing, and is used to generate three versions of the transform:rotate style.

```
112 \newcommand*{\LWR@rotstyle}[2]{%
113   #1transform:rotate(-#2deg);%
114 }
```

\LWR@scalestyle {*prefix*} {*xscale*} {*yscale*}

Prints the scale style with the given prefix.

prefix is -ms- or -webkit- or nothing, and is used to generate three versions of the transform:scale style.

```
115 \newcommand*{\LWR@scalestyle}[3]{%
116   #1transform:scale(#2,#3);%
117 }
```

§ 267.4 \includegraphics

Bool LWR@infloatrow Used to compute \linewidth.

```
118 \newbool{LWR@infloatrow}%
119 \boolefalse{LWR@infloatrow}
```

\LWR@opacity For HTML, used only for \includegraphics.

\LWR@opacity may be set by the transparent package.

```
120 \def\LWR@opacity{1}
```

\LWR@imagesizebox Used to determine the actual image size if needed.

```
121 \newsavebox{\LWR@imagesizebox}
```

\LWR@HTML@Gin@setfile {*w*} {*h*} {*filename*} Sets the parsed filename for HTML output.

```
122 \newcommand*{\LWR@HTML@Gin@setfile}[3]{%
123   \xdef\LWR@parsedfilename{\#3}%
124 }
```

Key [Gin] class css class for the image.

Define the new class key for the print-mode version of \includegraphics, which is enabled inside a lateximage.

```

125 \AtBeginDocument{
126 \define@key{Gin}{class}{}%
127 \define@key{Gin}{alt}{}%
128 }%
```

\LWR@replaceEPSSVG Usually, references to EPS files become SVG files, but if the `epstopdf` package is being used, it automatically converts EPS to PDF, and the following must NOT be done.

```

129 \AtBeginDocument{%
130 \@ifpackageloaded{epstopdf}%
131 {%
132     \newcommand*{\LWR@replaceEPSSVG}{}%
133 }{%
134     \newcommand*{\LWR@replaceEPSSVG}{%
135         \StrSubstitute{\LWR@tempone}{.eps}{.svg}[\LWR@tempone]%
136         \StrSubstitute{\LWR@tempone}{.EPS}{.SVG}[\LWR@tempone]%
137     }%
138 }%
139 }
```

\LWR@includegraphicsb * [<2: options>] [<3: options>] {<4: filename>}

`graphics` syntax is `\includegraphics * [<llx,lly>] [<urx,ury>] {<file>}`

`graphicx` syntax is `\includegraphics [<key values>] {<file>}`

If #3 is empty, only one optional argument was given, thus `graphicx` syntax.

If using `\epsfig` or `\psfig` from the `epsfig` package, #4 will be `\LWR@epsfig@filename`, which will have been set by the `file` or `figure` keys. Therefore, #4 must not be used until after the keys have been processed.

```

140 \NewDocumentCommand{\LWR@includegraphicsb}{s o o m}%
141 {%
```

Start the image tag on a new line, allow PDF output word wrap:

```
142 \LWR@origtilde \LWR@orignewline%
```

Temporarily compute `\ linewidth`, `\ textwidth`, `\ textheight` arguments with a 6x9 inch size until the next `\endgroup`.

```

143 \begingroup%
144 \ifthenelse{\cnttest{\value{\LWR@minipagedepth}}=}{0}{%
145 {%
146     \ifbool{\LWR@infloatrow}{%
147     }{%
148         \% not in a minipage or a floatrow:%
149         \setlength{\linewidth}{6in}%
150         \setlength{\textwidth}{6in}%
151         \setlength{\textheight}{9in}%
152     }%
153 }{}}
```

For correct em sizing during the width and height conversions:

```
154 \large%
```

Reset some defaults, possibly will be changed below if options were given:

```
155 \setlength{\LWR@igwidth}{0pt}%
156 \setlength{\LWR@igheight}{0pt}%
157 \renewcommand*{\LWR@igwidthstyle}{}%
158 \renewcommand*{\LWR@igheightstyle}{}%
159 \renewcommand*{\LWR@igorigin}{}%
160 \renewcommand*{\LWR@igangle}{}%
161 \renewcommand*{\LWR@igxscale}{1}%
162 \renewcommand*{\LWR@igyscale}{1}%
163 \renewcommand*{\LWR@igclass}{inlineimage}%

164 \ifdefvoid{\LWR@ThisAltText}{%
165     \edef\LWR@igalt{\ImageAltText}%
166 }{%
167     \edef\LWR@igalt{\LWR@ThisAltText}%
168 }
```

If #3 is empty, only one optional argument was given, thus `graphicx` syntax:

```
169 \IfValueF{#3}{%
170     \IfValueTF{#2}{%
171         {\setkeys{igraph}{#2}}%
172         {\setkeys{igraph}{} }%
173 }}
```

Fully expand and detokenize the filename, changing the file extension to `.svg` if necessary.

```
174 \begingroup%
175 \LetLtxMacro\Gin@setfile{\LWR@HTML@Gin@setfile}%
176 \edef\LWR@tempone{#4}%
177 \StrSubstitute{\LWR@tempone}{.pdf}{.svg}[\LWR@tempone]%
178 \StrSubstitute{\LWR@tempone}{.PDF}{.SVG}[\LWR@tempone]%
179 \LWR@replaceEPSSVG%
180 \xdef\LWR@parsedfilename{\LWR@tempone}%
181 \Ginclusion@graphics{\detokenize\expandafter{\LWR@tempone}}%
182 \endgroup%
183 \filename@parse{\LWR@parsedfilename}%
184 \LWR@traceinfo{\LWR@parsedfilename is \LWR@parsedfilename}%
185 \LWR@sanitize{\LWR@parsedfilename}%
```

If formatting for a word processor, find and set the actual image size, without rotation, using `PDF` instead of `SVG` to find the original bounding box:

```
186 \ifbool{FormatWP}{%
187     \begingroup%
188     \LWR@restoreorigformatting%
189     \ifpdf%
190         \appto{\LWR@restoreorigformatting}{%

283   \ifthenelse{\NOT\equal{\LWR@opacity}{1}}{%
284     {opacity:\LWR@opacity;\LWR@indentHTML}%
285   }%

```

```
286      "\LWR@indentHTML%
287 }{ }%
```

Set the class and alt tag:

```
288 class="\LWR@igclass"\LWR@indentHTML%
289 alt="\AltTextOpen\LWR@igalt\AltTextClose" \LWR@newline%
290 }% end of image tags
291 }% end of href
```

Return to original page size and font size:

```
292 \endgroup
```

Clear the single-use alt text:

```
293 \gdef\LWR@ThisAltText{}%
294 \LWR@traceinfo{\LWR@includegraphicsb done}%
295 }
```

\includegraphics [⟨key=val⟩] {⟨filename⟩}

Handles width and height, converted to fixed width and heights.

The user should always use no file suffix in the document source.

```
296 \AtBeginDocument{
297
298 \LWR@traceinfo{Patching includegraphics.}
299
300 \LetLtxMacro{\LWR@origincludegraphics}{\includegraphics}
301
302 \renewcommand*{\includegraphics}{%
303 {%
```

This graphic should trigger an HTML paragraph even if alone, so ensure that are doing paragraph handling:

```
304 \LWR@traceinfo{includegraphics}%
305 \LWR@ensuredoingapar%
306 \LWR@includegraphicsb%
307 }% includegraphics
308 }% AtBeginDocument
```

§ 267.5 Boxes

\LWR@rotboxorigin Holds the origin key letters.

```
309 \newcommand*{\LWR@rotboxorigin}{}%
```

\LWR@originname {⟨letter⟩}

Given one L^AT_EX origin key value, translate into an HTML origin word:

```
310 \newcommand*{\LWR@originname}[1]{%
311   \ifthenelse{\equal{#1}{t}}{top}{%
312   \ifthenelse{\equal{#1}{b}}{bottom}{%
313   \ifthenelse{\equal{#1}{c}}{center}{%
314   \ifthenelse{\equal{#1}{l}}{left}{%
315   \ifthenelse{\equal{#1}{r}}{right}{%
316 }}}
```

\LWR@originnames {⟨letters⟩}

Given one- or two-letter L^AT_EX origin key values, translate into HTML origin words:

```
317 \newcommand*{\LWR@originnames}[1]{%
318 \StrChar{#1}{1}[\LWR@strresult]%
319 \LWR@originname{\LWR@strresult}%
320 \StrChar{#1}{2}[\LWR@strresult]%
321 \LWR@originname{\LWR@strresult}%
322 }
```

Handle the origin key for \rotatebox:

```
323 \define@key{krotbox}{origin}{%
324 \renewcommand*{\LWR@rotboxorigin}{#1}%
325 }
```

These keys are ignored:

```
326 \define@key{krotbox}{x}{}
327 \define@key{krotbox}{y}{}
328 \define@key{krotbox}{units}{}
```

\rotatebox [⟨keyval list⟩] {⟨angle⟩} {⟨text⟩}

```
329 \AtBeginDocument{
```

The HTML version:

```
330 \NewDocumentCommand{\LWR@HTML@rotatebox}{O{} m +m}{%
```

Reset the origin to “none-given”:

```
331 \renewcommand*{\LWR@rotboxorigin}{}%
```

Process the optional keys, which may set \LWR@rotateboxorigin:

```
332 \setkeys{krotbox}{#1}%
```

Select inline-block so that HTML will transform this span:

```
333 \LWR@htmltagc{%
334     span\LWR@indentHTML
335     style="\LWR@indentHTML
336     display: inline-block;\LWR@indentHTML
```

If an origin was given, translate and print the origin information:

```
337     \ifthenelse{\NOT\equal{\LWR@rotboxorigin}{}{%
338         {transform-origin: \LWR@originnames{\LWR@rotboxorigin};\LWR@indentHTML}%
339     }{}}
```

Print the rotation information:

```
340     \LWR@rotstyle{-ms-}{#2}\LWR@indentHTML
341     \LWR@rotstyle{-webkit-}{#2}\LWR@indentHTML
342     \LWR@rotstyle{}{#2}"\LWR@orignewline%
343 }\LWR@orignewline%
```

Print the text to be rotated:

```
344 \begin{LWR@nestspan}%
345 #3%
```

Close the span:

```
346 \LWR@htmltagc{/span}%
347 \end{LWR@nestspan}%
348 }
```

The high-level interface:

```
349 \LWR@formatted{rotatebox}%
350
351 }% AtBeginDocument
```

```
\scalebox {<h-scale>} [<v-scale>] {<text>}
```

```
352 \AtBeginDocument{
```

The HTML version:

```
353 \NewDocumentCommand{\LWR@HTML@scalebox}{m o m}{%
```

Select inline-block so that HTML will transform this span:

```
354 \LWR@htmltagc{%
```

```
355     span\LWR@indentHTML
356     style="\LWR@indentHTML
357     display: inline-block;\LWR@indentHTML
```

Print the scaling information:

```
358     \LWR@scalestyle{-ms-}{#1}{\IfNoValueTF{#2}{#1}{#2}}\LWR@indentHTML
359     \LWR@scalestyle{-webkit-}{#1}{\IfNoValueTF{#2}{#1}{#2}}\LWR@indentHTML
360     \LWR@scalestyle{}{#1}{\IfNoValueTF{#2}{#1}{#2}}
361     "\LWR@orignewline
362 }\LWR@orignewline%
```

Print the text to be scaled:

```
363 \begin{LWR@nestspan}%
364 #3%
```

Close the span:

```
365 \LWR@htmltagc{/span}%
366 \end{LWR@nestspan}%
367 }
```

The high-level interface:

```
368 \LWR@formatted{scalebox}
369
370 }% AtBeginDocument

\reflectbox {<text>}

371 \AtBeginDocument{
372
373 \newcommand{\LWR@HTML@reflectbox}[1]{%
374 \scalebox{-1}[1]{#1}%
375 }% \reflectbox
376
377 \LWR@formatted{reflectbox}
378
379 }% AtBeginDocument

\resizebox {\<h-length>} {\<v-length>} {<text>}
```

Simply prints its text argument.

```
380 \AtBeginDocument{
381
382 \NewDocumentCommand{\LWR@HTML@resizebox}{s m m m}{%
383 #4%
384 }
385
386 \LWR@formatted{resizebox}
387
388 }% AtBeginDocument
```

File 170 l warp-graphicx.sty**§ 268 Package graphicx**

Pkg graphicx graphicx is emulated.

graphicx loads graphics, which also loads l warp-graphics, which remembers the original graphics definitions for use inside a `\teximage`, and then patches them `\AtBeginDocument` for HTML output.

l warp-graphics handles the syntax of either `graphics` or `graphicx`.

for HTML output: 1 \LWR@ProvidesPackagePass{graphicx}[2017/06/01]

File 171 l warp-grffile.sty**§ 269 Package grffile**

Pkg grffile **⚠ matching PDF and SVG** grffile is supported as-is. File types known to the browser are displayed, and unknown file types are given a link. Each PDF image for print mode should be accompanied by an SVG, PNG, or JPG version for HTML.

l warp-grffile now exists as a placeholder since grffile used to be emulated by l warp, and thus older versions of l warp-grffile may exist and should be overwritten by this newer version.

for HTML output: 1 \LWR@ProvidesPackagePass{grffile}[2017/06/30]

File 172 l warp-grid.sty**§ 270 Package grid**

Pkg grid grid is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{grid}[2009/06/16]

2 \newenvironment*{gridenv}{}{}

File 173 l warp-grid-system.sty**§ 271 Package grid-system**

(Emulates or patches code by MARCUS BITZL.)

Pkg grid-system grid-system is patched for use by l warp.

for HTML output 1 \LWR@ProvidesPackagePass{grid-system}[2014/02/16]

(\ifdef is in case the older syntax is removed.)

```
2 \AtBeginEnvironment{Row}{\setlength{\ linewidth}{6in}}
3
4 \ifdef{\endrow}{%
5   \AtBeginEnvironment{row}{\setlength{\ linewidth}{6in}}%
6 }{}%
7
8 \renewcommand{\gridsystem@finishcell}{\hspace{\gridsystem@cellsep}}
```

File 174 l warp-gridset.sty

16 }

```

File 186 **l warp-imakeidx.sty**

§ 284 Package **imakeidx**

(Emulates or patches code by ENRICO GREGORIO.)

Pkg imakeidx imakeidx is patched for use by l warp.

letter headings When using *makeindex*, to match the print and HTML output's display of index letter headings, specify the l warp.ist style:

\makeindex[options={-s l warp.ist}]

(For HTML the l warp.ist style is used automatically, which displays letter headings. When using xindy the default style also displays letter headings.)

index setup See section 8.6.18 for how to setup l warpmk to process the indexes with imakeidx, both with and without shell escape.

for HTML output: 1 \LWR@ProvidesPackagePass{imakeidx}[2016/10/15]

Use the new HTML suffix:

```

2 \catcode`\_=12%
3 \define@key{imki}{name}{\def\imki@name{\#1_html}}
4 \catcode`\_=8%

```

\printindex The HTML version of \printindex:

```

5 \catcode`\_=12%
6
7 \renewcommand*{\printindex}[1][\imki@jobname]{%
8 \LWR@orignewpage%
9 \LWR@startpars%

46       \@sanitize
47       \imki@nowrindex%
48     }%
49     {%
50       \edef\@idxfile{#1_html}%
51       \begingroup
52       \@sanitize
53       \wrindex\@idxfile%
54     }%
55   }%
56 }
57
58 \catcode`\_=8%
```

\item
\subitem
\subsubitem HTML versions of \item, etc.:

```
59 \appto\theindex{%
60   \let\item\LWR@indexitem%
```

```

61   \let\subitem\LWR@indexsubitem%
62   \let\subsubitem\LWR@indexsubsubitem%
63 }
```

```

\imki@wrindexentrysplit  {\langle file\rangle} {\langle entry\rangle} {\langle page\rangle}
\imki@wrindexentryunique {\langle file\rangle} {\langle entry\rangle} {\langle page\rangle}
```

While writing index entries, adds an `HTML` label, and writes the label's index instead of the page number:

```

64 \renewcommand\imki@wrindexentrysplit[3]{%
65 \addtocounter{LWR@autoindex}{1}%
66 \LWR@new@label{\LWRindex-\arabic{LWR@autoindex}}%
67 \expandafter\protected@write\csname#1@idxfile\endcsname{%
68   {\string\indexentry{\arabic{LWR@autoindex}}}}%
69 }
70
71 \renewcommand\imki@wrindexentryunique[3]{%
72 \addtocounter{LWR@autoindex}{1}%
73 \LWR@new@label{\LWRindex-\arabic{LWR@autoindex}}%
74 \protected@write\@indexfile{%
75   {\string\indexentry{\arabic{LWR@autoindex}}}}%
76 }
77
78 \def\imki@wrindexsplit#1#2{%
79 \imki@wrindexentrysplit{#1}{#2}{\thepage}%
80 \endgroup\imki@showidxentry{#1}{#2}%
81 \esphack%
82 }
83
84 \def\imki@wrindexunique#1#2{%
85 \imki@wrindexentryunique{#1}{#2}{\thepage}%
86 \endgroup\imki@showidxentry{#1}{#2}%
87 \esphack%
88 }
89
```

```
\LWR@imki@setxdydefopts
```

Sets the `xindy` `HTML` options, ignoring the user's settings.

```

90 \newcommand*\LWR@imki@setxdydefopts[]{%
91   \edef\imki@options{ \space %
92     -M \space \LWR@xindyStyle\space %
93     -L \space \LWR@xindyLanguage\space %
94     -C \space \LWR@xindyCodepage\space %
95   }%
96 }
```

```
\LWR@imki@setdefopts  {\langle user options\rangle}
```

Sets the `HTML` options, added to the user's settings, depending on whether `makeindex` or `xindy` are used.

For `makeindex`, the user's choice is ignored, and only the `lwarp` version is used. (Only one style at a time is possible.)

For *xindy*, multiple modules may be specified, and the l warp version is appended.

```

107 \newcommand*\LWR@imki@setdefopts[1]{%
108   \ifblank{#1}{%
109     \edef\imki@options{\space -s \space \LWR@makeindexStyle \space}%
110     \ifdefstring{\imki@progdefault}{xindy}{\LWR@imki@setxdydefopts}{}%
111     \ifdefstring{\imki@progdefault}{texindy}{\LWR@imki@setxdydefopts}{}%
112     \ifdefstring{\imki@progdefault}{truedxindy}{\LWR@imki@setxdydefopts}{}%
113   }{%
114     \edef\imki@options{\space #1 \space}%
115   }%
116 }
```

\imki@makeindex Use the new HTML options:

```

117 \xpatchcmd{\imki@makeindex}%
118   {\let\imki@options\space}%
119   {\LWR@imki@setdefopts{} }%
120   {}%
121   {\LWR@patcherror{imakeidx}{makeindex}}
```

Use the new HTML options.

```
122 \define@key{\imki}{options}{\LWR@imki@setdefopts{#1}}
```

\imki@resetdefaults Use the new HTML options:

```

123 \xpatchcmd{\imki@resetdefaults}%
124   {\def\imki@options{ }}%
125   {\LWR@imki@setdefopts{} }%
126   {}%
127   {\LWR@patcherror{imakeidx}{resetdefaults}}
```

theindex was already defined \AtBeginDocument by the l warp core, so it must be redefined here similarly, but patched for imakeidx:

Env theindex

```

128 \AtBeginDocument{%
129 \renewenvironment*{\theindex}{%
130   \imki@maybeaddtotoc
131   \imki@indexlevel{\indexname}
132   \let\item\LWR@indexitem%
133   \let\subitem\LWR@indexsubitem%
134   \let\subsubitem\LWR@indexsubsubitem%
135 }{%
136 }% AtBeginDocument
```

Update to the new defaults:

```
137 \imki@resetdefaults
```

Update to the new patches:

\AtBeginDocument is because \@wrindex is previously defined as \AtBeginDocument in the l warp core.

```

128 \ifimki@splitindex
129   \let\imki@startidx\imki@startidxunique
130   \AtBeginDocument{\let@\wrindex\imki@wrindexunique}
131   \let\imki@putindex\imki@putindexunique

144 \fi

```

File 187 l warp-index.sty

§ 285 Package index

(Emulates or patches code by DAVID M. JONES.)

Pkg index index is patched for use by l warp.

for HTML output 1 \LWR@ProvidesPackagePass{index}[2004/01/20]

Use \theLWR@autoindex instead of \thepage. \@tempswattrue is used to force an immediate write to the index file instead of waiting until the end of the page.

```

2 \xpatchcmd{\newindex}
3   {\x@newindex[\thepage]}
4   {%
5     \@tempswattrue%
6     \x@newindex[\theLWR@autoindex]%
7   }
8   {}
9   {\LWR@patcherror{index}{newindex}}
10
11 \xpatchcmd{\renewindex}
12   {\x@renewindex[\thepage]}
13   {%
14     \@tempswattrue%
15     \x@renewindex[\theLWR@autoindex]%
16   }
17   {}
18   {\LWR@patcherror{index}{renewindex}}

```

Patched to set a new autoindex:

```

19 \xpatchcmd{\@wrindex}
20   {\begingroup}
21   {%
22     \addtocounter{LWR@autoindex}{1}%                                l warp
23     \LWR@new@label{LWRindex-\arabic{LWR@autoindex}}%             l warp
24     \begingroup%
25   }
26   {}
27   {\LWR@patcherror{index}{@wrindex}}

```

\AtBeginDocument l warp core \lets \@wrindex to \LWR@wrindex. Since the index package has been loaded, \let to its version instead:

```

28 \let\LWR@index@\wrindex@\wrindex
29
30 \AtBeginDocument{
31 \let@\wrindex\LWR@index@\wrindex
32 }

```

Modified to add \index@prologue:

```

33 \AtBeginDocument{
34 \renewenvironment*{theindex}{%
35   \LWR@indexsection{\indexname}%
36   \ifx\index@prologue\empty\else
37     \index@prologue
38     \bigskip
39   \fi
40   \let\item\LWR@indexitem%
41   \let\subitem\LWR@indexsubitem%
42   \let\subsubitem\LWR@indexsubsubitem%
43 }{}%
44 }% AtBeginDocument

```

Disabled:

```

45 \def@showidx#1{}
46 \let@texttop\relax
47 \renewcommand*{\raggedbottom}{}%
48 \renewcommand*{\flushbottom}{}%
49 \renewcommand*{\markboth}[2]{}%
50 \renewcommand*{\markright}[1]{}%

```

File 188 **l warp-inputrc.sty**

§ 286 Package **inputrc**

(Emulates or patches code by UWE LÜCK.)

Pkg **inputrc** **inputrc** is patched for use by **l warp**.

for HTML output: 1 \LWR@ProvidesPackagePass{inputtrc}[2012/10/10]

Patched to remove extraneous spaces, which sometimes showed up in logos inside a `\textrimage`.

```

2 \renewcommand*\IT@prim@input[]{%
3   \typeout{\IT@indent\IT@currfile INPUTTING #1}%
4 %% ... TODO: option to write to '.log' only.
5   \xdef\IT@filestack{\{\IT@currfile\}\IT@filestack}%
6   \xdef\IT@currfile{\#1}%
7   \expandafter\gdef\expandafter\expandafter\IT@indent\expandafter{%
8     \IT@indent \IT@indent@unit}%
9   \@@@input#1%
10  \expandafter\IT@pop@indent\IT@indent \nil% l warp
11  \expandafter\IT@pop@file \IT@filestack\@nil% l warp
12  \IT@maybe@returnmessage% v0.2          l warp
13 }
```

File 189 **l warp-intopdf.sty**

§ 287 Package **intopdf**

Pkg `intopdf` `intopdf` is emulated.

The filespec, MIME type, and description are ignored for now.

for HTML output: 1 \LWR@ProvidesPackageDrop{intopdf}[2019/05/28]

```

2 \NewDocumentCommand{\attachandlink}{o m o m m}{%
3   \href{#2}{#5}%
4 }
```

File 190 **l warp-karnaugh-map.sty**

§ 288 Package **karnaugh-map**

(Emulates or patches code by MATTIAS JACOBSSON.)

Pkg `karnaugh-map` `karnaugh-map` is patched for use by `l warp`.

for HTML output: 1 \LWR@ProvidesPackagePass{karnaugh-map}[2017/02/20]

(It is hard to patch this macro, so the entire thing is redefined here, with the `l warp` modifications identified in comments.)

```

2 \RenewDocumentEnvironment{karnaugh-map}{s O{4} O{4} O{1} O{$X_1X_0$} O{$X_3X_2$} O{$X_5X_4$}}{%
3   \begingroup

File 191 l warp-keyfloat.sty

§ 289 Package **keyfloat**

(Emulates or patches code by BRIAN DUNN.)

Pkg **keyfloat** **keyfloat** is supported with a considerable amount of hacking. (It's a mashup of **l warp**, **keyfloat**, and **tocdata**.)

⚠ **keywrap** If placing a `\keyfig[H]` inside a `\keywrap`, use an absolute width for `\keyfig`, instead of `lw`-proportional widths. (The `[H]` option forces the use of a `minipage`, which internally adjusts for a virtual 6-inch wide `minipage`, which then corrupts the `lw` option.)

for HTML output:

```

1 \LWR@ProvidesPackagePass{keyfloat}[2019/09/23]
2
3 \@ifpackagelater{keyfloat}{2019/09/23}{}{
4     \PackageError{l warp-keyfloat}
5     {%
6         The keyfloat package is out of date.\MessageBreak
7         Update to keyfloat v2.01 2019/09/23 or later%
8     }
9     {%

```

```
10      Please update the keyfloat package. It's worth it!%
11  }
12 }
```

After `keyfloat` has loaded:

```

File 200 **l warp-listings.sty**

§ 298 Package **listings**

(Emulates or patches code by CARSTEN HEINZ, BROOKS MOSES, JOBST HOFFMANN.)

Pkg **listings** **listings** is supported with some limitations. Text formatting is not yet supported.

for HTML output: 1 \begin{warpHTML}

2 \LWR@ProvidesPackagePass{listings}[2018/09/02]

Force flexible columns. Fixed columns inserts spaces in the PDF output.

3 \lst@column@flexible

Patches to embed listings inside pre tags:

```

4 \let\LWR@origlst@Init\lst@Init
5 \let\LWR@origlst@DeInit\lst@DeInit
6
7 \let\LWR@origlst@EveryPar\lst@EveryPar
8
9 \renewcommand{\l@lstlisting}[2]{\hypertocfloat{1}{lstlisting}{lol}{#1}{#2}}

```

\lstset {*options*}

Use the **listings** literate option to replace HTML entities:

```

10 \def\lstset@#1{\endgroup%
11 % \ifx\@empty#1%
12 % \empty%
13 % \else%
14 % \setkeys{lst}{%
15 % #1%
16 % ,literate=%
17 % {<}{\HTMLentity{lt}}{4}%
18 % {>}{\HTMLentity{gt}}{4}%
19 % {\&}{\HTMLentity{amp}}{5}%
20 % }%
21 % \fi%
22 }

```

\lst@Init {*backslash-processing*} Done at the start of a listing.

23 \renewcommand{\lst@Init}[1]{%

Perform the `listings` initialization:

```

24 \LWR@traceinfo{lst@Init}%
25 \renewcommand*{\@capttype}{lstlisting}%
26 \let\lst@aboveskip\z@\let\lst@belowskip\z@%
27 \gdef\lst@boxpos{t}%
28 \let\lst@frame\empty
29   \let\lst@frametshape\empty
30   \let\lst@framershape\empty
31   \let\lst@framebshape\empty
32   \let\lst@framelshape\empty
33 \lstframe@\lst@frameround ffff\relax%
34 \lst@multicols\empty%
35 \LWR@origlst@Init{\#1}\relax%

```

Avoids extra horizontal space:

```

36 \def\lst@framelr{}%
37 \LWR@traceinfo{finished origlst@Init}%
38 \lst@ifdisplaystyle%

```

Creating a display.

Disable line numbers, produce the `<pre>`, then reenable line numbers.

```

39 \LWR@traceinfo{About to create verbatim.}%
40 \let\lst@EveryPar\relax%
41 \LWR@forcenewpage
42 \LWR@atbeginverbatim{2}{programlisting}%
43
44 \let\lst@EveryPar\LWR@origlst@EveryPar%
45 \else%

```

Inline, so open a ``:

```

46 \ifbool{\LWR@verbtags}{\LWR@htmltag{span class="inlineprogramlisting"}{}}{%
47 \fi%
48 }%
49

```

`\lst@DeInit` Done at the end of a listing.

```

50 \renewcommand*{\lst@DeInit}{%
51 \lst@ifdisplaystyle%

```

Creating a display.

Disable line numbers, produce the `</pre>`, then reenable line numbers:

```

52 \let\lst@EveryPar\relax%
53 \LWR@afterendverbatim{0}%
54 \let\lst@EveryPar\LWR@origlst@EveryPar%
55 \else%

```

Inline, so create the closing ``:

```

56 \ifbool{\LWR@verbtags}{\noindent\LWR@htmltag{/span}{}}{%
57 \fi%

```

Final `listings` deinit:

```
58 \LWR@origlst@DeInit%
59 }
```

```
\lst@MakeCaption {⟨t/b⟩}
```

This is called BOTH at the top and at the bottom of each listing.

Patched for lwarp.

```
60 \def\lst@MakeCaption#1{%
61 \LWR@traceinfo{MAKING CAPTION at #1}%
62 \lst@ifdisplaystyle
63 \LWR@traceinfo{making a listings display caption}%

File 203 **l warp-longtable.sty**

§ 301 Package **longtable**

(Emulates or patches code by DAVID CARLISLE.)

Pkg **longtable** **longtable** is emulated.

for **HTML output:** 1 \LWR@ProvidesPackageDrop{longtable}[2014/10/28]

Use one of either `\endhead` or `\endfirsthead` for both print and HTML, and use a `\warpprintonly` macro to disable the other head phrase, and also the `\endfoot` and `\endfirstfoot` phrases. (See section 8.10.4 if using `threeparttablex`.)

```

\begin{longtable}{ [column specifiers] }
[ . . . ] \endfirsthead    % or \endhead, for print and HTML
\warpprintonly{           % not used in HTML
[ . . . ] \endhead      % or \endfirsthead
[ . . . ] \endfoot
[ <lastfoot macros> ] \endlastfoot
}
... table contents ...
\warpHTMLonly{
[ <lastfoot macros> ]    % HTML last footer, without \endfoot
                           % or \endlastfoot.
}
\end{longtable}
```

⚠ Misplaced `\noalign` Use the `\warpprintonly` macro instead of the `warpprint` environment. Doing so helps avoid “Misplaced `\noalign`.” when using `\begin{warpprint}`.

⚠ `\kill` `\kill` is ignored, place a `\kill` line inside

```
\begin{warpprint} . . . \end{warpprint}
```

or place it inside `\warpprintonly`.

 **lateximage** `longtable` is not supported inside a `lateximage`.

See:

<http://tex.stackexchange.com/questions/43006/why-is-input-not-expandable>

Used to detect more than one of `\endhead` and `\endfirsthead` in use for HTML at the same time.

```
2 \newbool{LWR@longtable@havehead}
3 \boolfalse{LWR@longtable@havehead}
```

Env `longtable` * [*horizontalignment*] {*colspec*} Emulates the `longtable` environment.

Per the `caption` package, the starred version steps the counter per caption. The unstarred version steps the counter once at the beginning, but not at each caption.

Options [c], [l], and [r] are ignored.

```
4 \newenvironment{longtable*}[2][]{
5 \LWR@floatbegin{table}%
6 \setcaptiontype{\LTcaptype}%
7 \caption@setoptions{longtable}%
8 \caption@setoptions{@longtable}%
9 \caption@LT@setup%
10 \booltrue{LWR@starredlongtable}%
11 \boolfalse{LWR@longtable@havehead}%
12 \let\captionlistentry\LWR@LTcaptionlistentry%
13 \tabular{#2}
14 }
15 {\endtabular\LWR@floatend}
16
17 \newenvironment{longtable}[2][]{
18 \LWR@floatbegin{table}%
19 \setcaptiontype{\LTcaptype}%
20 \caption@setoptions{longtable}%
21 \caption@setoptions{@longtable}%
22 \caption@LT@setup%
23 \refstepcounter{\LTcaptype}%
24 \boolfalse{LWR@longtable@havehead}%
25 \let\captionlistentry\LWR@LTcaptionlistentry%
26 \tabular{#2}
27 }
28 {\endtabular\LWR@floatend}
```

Provided for compatibility, but ignored:

```
29 \newcounter{LTchunksize}
```

Error for heads which should have been in `\warpprintonly`:

```
30 \newcommand*{\LWR@longtable@headerror}{%
31     \PackageError{lwarp}%
32     {For longtable:\MessageBreak}
```

```

33   1: Keep either one of an \protect\endhead\space or
34     \protect\endfirsthead\space\MessageBreak
35     \space phrase as-is, to be used by both print and HTML.\MessageBreak
36   2: Place any other \protect\end... phrases inside a\MessageBreak
37     \space\protect\warpprintonly\space macro,
38       to be ignored by HTML.\MessageBreak
39   3: Add a final footer for HTML at the end of the table\MessageBreak
40     \space inside a \protect\warpHTMLonly\space macro.
41       This can be\MessageBreak
42     \space a copy of an \protect\endfoot\space or
43       \protect\endfirstfoot\space phrase, \MessageBreak
44     \space but without the actual \protect\endfoot\space
45       or \protect\endfirstfoot\MessageBreak
46     \space macros. If using threeparttablex, add\MessageBreak
47     \space \protect\insertTableNotes\space here,
48       optionally with\MessageBreak
49     \space \protect\UseMinipageWidths\space in front.\MessageBreak
50   See the lwarp documentation regarding longtables\MessageBreak
51   and threeparttablex}
52 {See the lwarp documentation regading longtables and threeparttablex.}
53 }

File 213 **lwarf-lyluatex.sty**

§ 311 Package **lyluatex**

(Emulates or patches code by Fr. JACQUES PERON, URS LISKA, BR. SAMUEL SPRINGUEL.)

Pkg lyluatex lyluatex is patched for use by lwarf.

For the first compile, to set *lwarpmk*'s configuration, use:

```
lualatex --shell-escape <filename>
```

⚠ **images** After compiling the document with **lwarpmk html**, use **lwarpmk limages** to convert the Lilypond images for HTML.

css The option `insert=systems` results in an image per system. Each music image “system” is placed inside a `` of class **lyluatex**, which defaults to `display: inline-block`.

⚠ **insert=fullpage** The option `insert=fullpage` results in a single image per page of printed output.

css Each music “fullpage” image is placed inside a <div> of class `lyluatex`. To match the number of measures per line with the printed version, use the `geometry` package to select the page geometry, or use the `lyluatex` options for page and staff sizes.

⚠️ options To use `\linewidth` or `\textwidth` inside the package options for `lyluatex`, use the `kvoptions-patch` package first:

```
\usepackage{kvoptions-patch}
\usepackage[...,line-width=0.8\linewidth,...]{lyluatex}
```

⚠️ raw-pdf If using `raw-pdf`, the resulting PDF images must be converted to SVG:

```
Enter ⇒ l warpmk pdftosvg tmp-ly/*.pdf
```

for HTML output:

```
1 \LWR@origRequirePackage{luacode}
2
3 \LWR@ProvidesPackagePass{lyluatex}[2019/05/27]
```

User-redefinable ALT tag:

```
4 \newcommand*\LyluatexImageAltText{-lilypond-\PackageDiagramAltText}
```

`\ly@compilescore`

```
{⟨Lilypond object⟩}
5 \LetLtxMacro{\LWR@orig@ly@compilescore}{\ly@compilescore}
6
7 \renewcommand*\ly@compilescore[1]{%
```

A local group holds a number of changes:

```
8 \begingroup%
```

The user’s original geometry and font size are restored to match the print version. This allows for correct spacing in the musical score.

```
9 \LWR@orignewpage%
10 \LWR@origloadgeometry{\LWR@usergeometry}%
11 \LWR@print@normalsize%
```

A local group holds a redefined `\includegraphics` which is used by `lyluatex.lua` to insert the *Lilypond* score if `insert=systems` is used. This is now placed inside a `lateximage`, which itself is placed inside a of class `lyluatex`.

`\LWR@addbaselinemarker` preserves the left margins.

```
12 \renewcommand{\includegraphics}[2][]{
13   \InlineClass{lyluatex}{%
14     \begin{lateximage}[\LyluatexImageAltText]%
15     \LWR@addbaselinemarker%
16     \LWR@origincludegraphics{##2}%
17     \end{lateximage}%
18   }%
19 }%
```

From the original:

```
20 \ly@setunits%
```

```

21   \directlua{
22     ly_opts:set_option('currfiledir', [[\currfiledir]])
23     ly_opts:set_option('twoside', '\ly@istwosided')
24     #1
25   }%
26   \ly@resetunits%
27   \ly@currentfonts%

```

The fullpage version is set inside an HTML <div>:

```

28   \directlua{
29     if (ly.score.insert == 'fullpage') then
30       tex.print{[[\string\begin{BlockClass}{lyluatex}]]}
31     end
32   }%

```

Generate the score:

```
33   \directlua{ly.score:process()}%
```

Close the <div>:

```

34   \directlua{
35     if (ly.score.insert == 'fullpage') then
36       tex.print{[[\string\end{BlockClass}]]}
37     end
38   }%

```

Move to a new page and renew the regular page geometry:

```

39   \LWR@orignewpage%
40   \LWR@origrestoregeometry%

```

End of the local group.

```

41   \endgroup%
42 }

```

In HTML the following generates an error, so is removed:

```

43 \xpatchcmd{\endly@bufferenv}
44   {\hspace{0pt}\\"}
45   {}
46   {}
47   {\LWR@patcherror{lyluatex}{endly@bufferenv}}

```

File 214 **lwarp-magaz.sty**

§ 312 Package **magaz**

Pkg magaz magaz is emulated.

for HTML output: 1 \LWR@ProvidesPackageDrop{magaz}[2011/11/24]

File 215 **l warp-makeidx.sty**

§ 313 Package **makeidx**

(Emulates or patches code by LATEX PROJECT TEAM.)

Pkg **makeidx** **makeidx** is patched for use by **l warp**.

for HTML output: 1 \LWR@ProvidesPackagePass{makeidx}[2014/09/29]

\@wrindex is redefined \AtBeginDocument by the **l warp** core.

\printindex

```

2 \preto\printindex{%
3     \LWR@orignewpage%
4     \LWR@startpars%
5 }

```

File 216 **l warp-manyfoot.sty**

§ 314 Package **manyfoot**

Pkg **manyfoot** **manyfoot** is emulated.

bigfoot, manyfoot Verbatim footnotes are not yet supported.

 **verbatim**

If using the **bigfoot** package, and possibly also **manyfoot**, problems may occur with counter allocation because **l warp** uses many counters, and there is a difference in how counters numbered 256 and up are handled in pdfLATEX. With **bigfoot** this has been known to show up as an error related to one footnote insert being forbidden inside another. Another problem showed up as a input stack error, and which of these problems occurred depended on how many counters were allocated.

As a possible solution, try creating several new counters before defining **bigfoot** or **manyfoot** footnotes, hoping to shift the problematic counter above the 256 threshold. It may instead be necessary to use XeLATEX or LuaLATEX instead of pdfLATEX.

l warp's emulation of **bigfoot** uses **manyfoot**, so some of the **bigfoot** enhancements are included here.

The **bigfoot** "default" footnote is ignored, using the l warp version instead.

for HTML output: 1 \LWR@ProvidesPackageDrop{manyfoot}[2005/09/11]

5   \end{lateximage}%
6 }
7
8 \renewcommand{\textmvs}[1]{%
9   \begin{lateximage}%
10  \mvs #1%
11  \end{lateximage}%
12 }
```

File 222 l warp-mathtools.sty**§ 320 Package mathtools**

(Emulates or patches code by MORTEN HØGHLØM, LARS MADSEN.)

Pkg mathtools mathtools is patched for use by l warp.

⚠ numbering, italics showonlyrefs and mathic are disabled.

for HTML output: 1 \LWR@ProvidesPackagePass{mathtools}[2018/01/08]

```
2 \RequirePackage{graphicx}

3 \MHInternalSyntaxOn
```

Forces showonlyrefs off because l warp uses cleverref, which is not compatible with showonlyrefs.

```
4 \renewcommand*\MT_showonlyrefs_true:{\MT_showonlyrefs_false:}
5 \mathtoolsset{showonlyrefs=false}
```

Forces math italic correction off. Not patched for l warp.

```
6 \renewcommand*\{\MT_mathic_true:\}{\MT_mathic_false:}
7 \mathtoolsset{mathic=false}

8 \MHInternalSyntaxOff
```

File 223 l warp-mcaption.sty**§ 321 Package mcaption**

(Emulates or patches code by STEPHAN HENNIG.)

- Pkg **mpar** **mpar** is ignored.
for HTML output: Discard all options for **l warp-mcaption**:

```
1 \LWR@ProvidesPackageDrop{mpar}[2009/03/13]

2 \newenvironment{marginpar}{}{}
3 \newcommand*\{\marginparalign}{}
4 \newlength{\marginparsep}
```

File 224 l warp-mdframed.sty**§ 322 Package mdframed**

(Emulates or patches code by MARCO DANIEL, ELKE SCHUBERT.)

- Pkg **mdframed** **mdframed** is loaded with options forced to **framemethod=none**.

§ 322.1 Limitations

- support** Most basic functionality is supported, including frame background colors and single-border colors and thickness, title and subtitle background colors and borders and thickness, border radius, and shadow. CSS classes are created for **mdframed** environments and frame titles.

- ⚠ loading** When used, **l warp** loads **mdframed** in **HTML** with **framemethod=none**.

- font** For title font, use

frametitlefont=\textbf,

instead of

frametitlefont=\bfseries,

where **\textbf** must appear just before the comma and will receive the following text as its argument (since the text happens to be between braces in the **mdframed** source). Since **l warp** does not support **\bfseries** and friends, only one font selection may be made at a time.

theoremtitlefont theoremtitlefont is not supported, since the following text is not in braces in the mdframed source.

ignored options userdefinedwidth and align are currently ignored.

css classes Environments created or encapsulated by mdframed are enclosed in a <div> of class mdframed, and also class md<environmentname> for new environments.

Frame titles are placed in a <div> of class |mdframedtitle|. Subtitles are in a <div> of class |mdframedsubtitle|, and likewise for subsubtitles.

Pre-existing hooks are used to patch extra functions before and after the frames.

§ 322.2 Package loading

for HTML output:

```
1 \RequirePackage{xcolor}%
2 %
3 \LWR@ProvidesPackageDrop{mdframed}[2013/07/01]
```

Do not require Tikz or pstricks:

```
4 \LWR@origRequirePackage[framemethod=none]{mdframed}
```

§ 322.3 Patches

Patch to remove PDF formatting and add HTML tags:

```
5 \AtBeginDocument{%
6 \def\mdf@trivlist#1{%
7   \edef\mdf@temp{%
8     \topsep=\the\topsep\relax%
9     \partopsep=\the\partopsep\relax%
10    \parsep=\the\parsep\relax%
11  }%
12  \setlength{\topsep}{#1}%
13  \topskip\z@%
14  \partopsep\z@%
15  \parsep\z@%
16  \@nmbrlistfalse%
17  \@trivlist%
18  \labelwidth\z@%
19  \leftmargin\z@%
20  \itemindent\z@%
21  \let\@itemlabel\empty%
22  \def\makelabel##1{##1}%
23  \item\relax\mdf@temp\relax%
24 }%
25 %
26 \renewcommand*\endmdf@trivlist}{%
27 \LWR@traceinfo{endmdf@trivlist}%
28 \endtrivlist%
29 \LWR@listend%
30 }%
31 }% AtBeginDocument
```

§ 322.4 Initial setup

To handle css and paragraphs, patch code at start and end of environment and contents. `\LWR@print@raggedright` helps avoid hyphenation.

```
32 \mdfsetup{
33 startcode={\LWR@mdframedstart\LWR@print@raggedright},
34 endcode={\LWR@mdframedend},
35 startinnercode={\LWR@startpars\LWR@print@raggedright},
36 endinnercode={\LWR@stoppars},
37 }
```

§ 322.5 Color and length HTML conversion

`\LWR@mdfprintcolor` {*mdfcolorkey*}

Given the `mdframed` key, print the color.

```
38 \newcommand*{\LWR@mdfprintcolor}[1]{%
39 \convertcolorspec{named}{\nameuse{mdf@\#1}}{HTML}\LWR@tempcolor%
40 \LWR@origpound\LWR@tempcolor
41 }
```

`\LWR@mdfprintlength` {*mdflengthkey*}

Given the `mdframed` key, print the length.

```
42 \newcommand*{\LWR@mdfprintlength}[1]{%
43 \LWR@forceminwidth{\nameuse{mdf@\#1@length}}%
44 \LWR@printlength{\LWR@atleastonept}%
45 }
```

§ 322.6 Environment encapsulation

`\LWR@mdframedstart` Actions before an mdframe starts.

Encapsulate a frame inside a `<div>` of the desired `class`.

```
46 \newcommand*{\LWR@mdframedstart}{%
47 \LWR@traceinfo{\LWR@mdframedstart start}%
```

Turn off paragraph handling during the generation of the encapsulating tags:

```
48 \LWR@stoppars%
```

Open a `<div>` and with custom `class` and custom `style`. A `BlockClass` environment is not used because this `<div>` is created by the `mdframed` `startcode` and `endcode` settings, which do not properly nest the `<div>` inside the `mdframed` environment.

```
49 \LWR@htmlltagc{div class="%"
50 mdframed%
51 \ifdefstring{\LWR@mdthisenv}{mdframed}{}{\LWR@mdthisenv}%
52 " \LWR@orignewline
53 style=" \LWR@orignewline
```

Convert and print the background color:

```
54 background: \LWR@mdfprintcolor{backgroundcolor} ; \LWR@orignewline
```

Convert and print the border color and width:

```
55 border: \LWR@mdfprintlength{linewidth} solid  
56 \LWR@mdfprintcolor{linecolor} ; \LWR@orignewline
```

Convert and print the border radius:

```
57 border-radius: \LWR@mdfprintlength{roundcorner} ; \LWR@orignewline
```

Convert and print the shadow:

```
58 \ifbool{mdf@shadow}{%  
59   box-shadow:  
60   \LWR@mdfprintlength{shadowsize}  
61   \LWR@mdfprintlength{shadowsize}  
62   \LWR@mdfprintlength{shadowsize}  
63   \LWR@mdfprintcolor{shadowcolor} ;  
64 }  
65 {box-shadow: none ;}  
66 \LWR@orignewline  
  
67 "%}  
68 % \LWR@htmldivclass{\LWR@mdthisenv}
```

`mdframed` environment may not work with the `HTML` versions of the following, so restore them to their originals while inside `mdframed`:

```
69 \LWR@select@print@hspace%  
70 \renewcommand*\rule{\LWR@print@rule}  
71 \LetLtxMacro\makebox\LWR@print@makebox%  
  
72 \LWR@startpars%  
73 \LWR@traceinfo{\LWR@mdframedstart done}%  
74 }
```

`\LWR@mdframedend` Actions after an `mdframe` ends.

After closing the `<div>`, globally restore to the default environment type:

```
75 \newcommand*{\LWR@mdframedend}{  
76 \LWR@traceinfo{\LWR@mdframedend start}}%
```

Close the custom `<div>`:

```
77 \LWR@htmldivclassend{\LWR@mdthisenv}
```

Reset future custom class to the default:

```
78 \gdef\LWR@mdthisenv{mdframed}
```

Resume paragraph handling:

```
79 \LWR@startpars%  
80 \LWR@traceinfo{\LWR@mdframedend done}%  
81 }
```

§ 322.7 Mdframed environment

```

82 \renewenvironment{mdframed}[1][]{

§ 322.8 Titles and subtitles

\mdfframedtitleenv {*<title>*}

Place the title inside a <div> of class mdframedtitle:

```
132 \newlength{\LWR@titleroundcorner}
133
134 \renewrobustcmd\mdfframedtitleenv[1]{%
135 \LWR@traceinfo{\LWR@mdframedtitleenv start}%

```

Open a <div> with a custom class and custom style:

```
136 \begin{BlockClass}[%
```

Convert and print the title background color:

```
137 background:
138 \LWR@mdfprintcolor{frametitlebackgroundcolor}
139 ; \LWR@orignewline
```

Convert and print the title rule:

```
140 \ifbool{mdf@frametitlerule}{%
141   border-bottom:
142   \LWR@mdfprintlength{frametitlerulewidth}
143   solid
144   \LWR@mdfprintcolor{frametitlerulecolor}
145   ; \LWR@orignewline
146 }{}%
```

Finish the custom style and the opening <div> tag:

```
147 ]{mdframedtitle}%
```

Print the title inside the <div>:

```
148 \mdf@frametitlefont{\LWR@textcurrentfont{\#1}}%
```

Close the <div>:

```
149 \end{BlockClass}%
150 \LWR@traceinfo{\LWR@mdframedtitleenv end}%
151 }
```

\LWR@mdfsubtitlecommon {*<sub -or- subsub>*} [*<options>*] {*<title>*}

Common code for \LWR@mdfsubtitle and \LWR@mdfsubsubtitle.

Encapsulate the subtitle inside a <div> of class mdframedsubtitle:

```
152 \NewDocumentCommand{\LWR@mdfsubtitlecommon}{m o m}
153 % the following empty line is required
154
155 \LWR@traceinfo{\LWR@mdframedsubtitlecommon start}%
```

Open a <div> with a custom class and custom style:

```
156 \begin{BlockClass}[%
```

Convert and print the background color:

```
157 background:
158 \LWR@mdfprintcolor{\#1titlebackgroundcolor}
159 ; \LWR@orignewline
```

Convert and print the above line:

```
160 \ifbool{mdf@#1titleaboveline}{%
161     border-top:
162     \LWR@mdfprintlength{#1titleabovelinewidth}
163     solid
164     \LWR@mdfprintcolor{#1titleabovelinecolor}
165     ; \LWR@orignewline
166 }{}}%
```

Convert and print the below line:

```
167 \ifbool{mdf@#1titlebelowline}{%
168     border-bottom:
169     \LWR@mdfprintlength{#1titlebelowlinewidth}
170     solid
171     \LWR@mdfprintcolor{#1titlebelowlinecolor}
172     ; \LWR@orignewline
173 }{}}%
```

Finish the custom style and the opening <div> tag:

```
174 ]{mdframed#1title}%
```

Perform the original subtitle action:

```
175 \IfNoValueTF{#2}{%
176 {\@nameuse{\LWR@origmdf#1title}{\csuse{mdf@#1titlefont}{\LWR@textcurrentfont{#3}}}}%
177 {\@nameuse{\LWR@origmdf#1title}[#2]{\csuse{mdf@#1titlefont}{\LWR@textcurrentfont{#3}}}}}}
```

Close the <div>:

```
178 \end{BlockClass}%
179 \LWR@traceinfo{\LWR@mdframedsubtitlecommon end}%
180 }
```

\LWR@mdfsubtitle [⟨options⟩] {⟨title⟩}

```
181 \newcommand*{\LWR@mdfsubtitle}{%
182 \LWR@mdfsubtitlecommon{sub}%
183 }%
184 \let\mdfsubtitle\LWR@mdfsubtitle
```

\LWR@mdfsubsubtitle [⟨options⟩] {⟨title⟩}

```
185 \newcommand*{\LWR@mdfsubsubtitle}{%
186 \LWR@mdfsubtitlecommon{subsub}%
187 }%
188 \let\mdfsubsubtitle\LWR@mdfsubsubtitle
```

§ 322.9 New environments

\LWR@mdthisenv Stores the environment of the frame about to be created:

```

File 225 **l warp-media9.sty**

§ 323 Package **media9**

Pkg media9 media9 is emulated.

The packages `multimedia`, `movie15`, and `media9` are supported.

`HTML5 <audio>` and `<video>` objects are created for `.mp3` and `.mp4` files.

`HTML5 <embed>` objects are created for `http` and `ftp` links.

`\href` links are created for other media types. (Unfortunately, there is not much overlap between the file types supported for print output and the file types supported by `HTML5`.)

For `media9`, a multimedia object is inserted for each `addresource=`, as well as each `flashvars source=` and `src=`. This may result in duplicate objects.

Undesired objects may be nullified by placing them inside `\warpprintonly` or the `warpprint` environment.

Each `HTML` multimedia object includes the poster text, except for `<embed>` objects. For `movie15`, the `text` option is supported to specify the poster text.

The `width`, `height`, and `totalheight` options are supported. The `HTML` object is scaled according to the display width, correctly compensating for either tall or wide viewports.

Other options are ignored.

`media9 \addmediapath` is supported. It is assumed that the same path structure will exist for the `HTML` document.

`HTML5` media controls are always specified for each `<audio>` and `<video>` object.

`media9` slideshows are not supported.

`\hyperlink{movie}`, `\movieref`, and `\mediabutton` are not supported.

3D objects are not supported.

If using a `YOUTUBE™` video, use an “embedded” URL with `.../embed/...` instead of `.../v/...`

⚠ & in a URL Many special characters are converted to regular catcode 12 characters for use inside a URL. `&` is used in the flash variables fields, which are split with `xparse \SplitList`, which does not seem to work with a catcode 12 divider token, so `&` is not converted to catcode 12, and will not work in a URL with `media9`. Using `&` in a URL in a `flashvars` field may also cause parsing problems with print output, as well.

for HTML output:

```

1 \LWR@ProvidesPackageDrop{media9}[2019/02/21]

2 \LWR@origRequirePackage{lwarp-common-multimedia}
3
4 \RequirePackage{xkeyval}
```

`\addmediapath {<path>}`

Supported.

```

5 \newcommand*{\LWR@medianine@path}{}%

5   \autoadjustlogos*
6   \let\LWR@formatting\LWR@metalogox@currentformatting
7 }

```

File 229 **l warp-mhchem.sty**

§ 327 Package **mhchem**

(Emulates or patches code by MARTIN HENSEL.)

Pkg mhchem mhchem is patched for use by l warp.

without MATHJAX Without MATHJAX, mhchem expressions are converted to SVG math. Inline expressions use hashed filenames to allow reuse, and assume that any mhchem options are global.

MATHJAX with mhchem extension For MATHJAX, the mhchem extension is used if the mhchem expression is used inside a math expression:

$\text{\ce{C6H5-CHO}}$

not inside math

If *not* used inside a math expression, l warp converts standalone mhchem expressions into SVG math images.

MATHJAX without mhchem extension If the MATHJAX mhchem extension is not used, expressions inside math must be placed between `\displaymathother` and `\displaymathnormal`:

`\displaymathother
\\[\ce{ ... }] . . . \ce { ... }`

When producing HTML output without the MATHJAX mhchem extension, l warp does not support the use of nested dollar signs in mhchem expressions.

For some examples from the mhchem manual, change as follows:

$\text{\ce{NaOH(aq,$\infty)}}$$	% old
$\text{\ce{NaOH(aq,\infty)}}$$	% new
$\text{\ce{Fe(CN)_{\frac{6}{2}}}}$$	% old
$\text{\ce{Fe(CN)_{\frac{6}{2}}}}$$	% new
$\text{\ce{NO_{x}}} $$	% old
$\text{\ce{NO_x}} $$	% new
$\text{\ce{NO_{x}}}$$	% old
$\text{\ce{NO_{x}}}$$	% new
$\text{\ce{$cis$[-][PtCl2(NH3)2]}}$$	% old
$\text{\ce{$\mathit{cis}$[-][PtCl2(NH3)2]}}$$	% new

for HTML output: 1 \LWR@ProvidesPackagePass{mhchem}[2018/06/22]

The original definition of \ce:

```
2 \LetLtxMacro{\LWR@mhchem@origce}{\ce}
```

The new definition, called from the new \ce after math shift is set. The starred `\textrimage` uses a hashed filename for the svg image. The alt tag is set to the `mhchem` expression.

```
3 \newcommand{\LWR@mhchem@HTML@ce}[1]{%
4 \LWR@findcurrenttextcolor% sets \LWR@tempcolor
5 \ifbool{\LWR@xfakebold}{%
6   {\def{\LWR@tempone{Y}}{%
7   {\def{\LWR@tempone{N}}{%
8 \begin{\textrimage}*[{\textbackslash ce}\{\LWR@HTMLsanitize{\#1}\}]*%
9   [%
10    FM{\LWR@f@family}%
11    SR{\LWR@f@series}%
12    SH{\LWR@f@shape}%
13    SHC{\LWR@f@shapecaps}%
14    CL{\LWR@tempcolor}%
15    FB{\LWR@tempone{xfakebold}%
16  ]%
17 \LWR@setcurrentfont%
18 \LWR@mhchem@origce{\#1}%
19 \end{\textrimage}%
20 \endgroup%
21 \addtocounter{\LWR@mhchem@cedepth}{-1}%
22 }
```

Only set math shift if outer depth:

```
23 \newcounter{\LWR@mhchem@cedepth}
24 \setcounter{\LWR@mhchem@cedepth}{0}
```

The new \ce. Sets math shift then continues.

```
25 \renewcommand{\ce}{%
26 \begingroup%
27 \ifnumequal{\value{\LWR@mhchem@cedepth}}{0}{%
28   \catcode`\$=3% math shift
29 }{}%
30 \addtocounter{\LWR@mhchem@cedepth}{1}%
31 \LWR@mhchem@HTML@ce%
32 }
```

The original definition of \cesplit:

```
33 \LetLtxMacro{\LWR@mhchem@origcesplit}{\cesplit}
```

The new definition, called from the new \cesplit after math shift is set. The starred `\teximage` uses a hashed filename for the svg image. The alt tag is set to the `mhchem` expression.

```

34 \newcommand*{\LWR@mhchem@HTML@cesplit}[2]

File 237 **lwarf-movie15.sty**

§ 335 Package **movie15**

Pkg movie15 movie15 is emualted.

The packages **multimedia**, **movie15**, and **media9** are supported.

HTML5 **<audio>** and **<video>** objects are created for **.mp3** and **.mp4** files.

HTML5 **<embed>** objects are created for **http** and **ftp** links.

\href links are created for other media types. (Unfortunately, there is not much overlap between the file types supported for print output and the file types supported by HTML5.)

For **media9**, a multimedia object is inserted for each **addresource=**, as well as each **flashvars source=** and **src=**. This may result in duplicate objects.

Undesired objects may be nullified by placing them inside \warpprintonly or the warpprint environment.

Each **HTML** multimedia object includes the poster text, except for **<embed>** objects. For **movie15**, the **text** option is supported to specify the poster text.

The **width**, **height**, and **totalheight** options are supported. The **HTML** object is scaled according to the display width, correctly compensating for either tall or wide viewports.

Other options are ignored.

media9 \addmediapath is supported. It is assumed that the same path structure will exist for the **HTML** document.

HTML5 media controls are always specified for each **<audio>** and **<video>** object.

media9 slideshows are not supported.

\hyperlinkmovie, \movieref, and \mediabutton are not supported.

3D objects are not supported.

If using a **YOUTUBE™** video, use an “embedded” URL with **.../embed/...** instead of **.../v/...**

for HTML output: 1 \LWR@ProvidesPackageDrop{movie15}[2012/05/16]

File 240 l warp-multicol.sty**§ 338 Package multicol**

(Emulates or patches code by FRANK MITTELBACH.)

Pkg multicol multicol is emulated.

for HTML output 1 \LWR@ProvidesPackageDrop{multicol}[2018/12/27]

Multicols are converted into a 1–3 column display, browser-supported.

The optional multicols heading is placed inside a <div> of class `multicolshading`.

The content is placed inside a <div> of class `multicols`.

2 \begin{warpHTML}

Env multicol * {\langle numcols \rangle} [{\langle heading \rangle}]
3 \NewDocumentEnvironment{multicol}{s m o}

HTML <div> class to contain everything:

4 {
5 \LWR@forcenewpage
6 \BlockClass{multicol}

Optional HTML <div> class for the heading:

7 \IfValueT{\#3}{\begin{BlockClass}{multicolshading}\#3\end{BlockClass}}%

Change \linewidth to compensate for expected size:

8 \setlength{\linewidth}{\linewidth/#2}

Locally force any minipages to be fullwidth:

9 \booltrue{\LWR@forceminipagefullwidth}
10 }

When done with the environment, close the <div>:

11 {\endBlockClass}

Emulated null functions which are not used in HTML:

12 \newcommand*{\columnbreak}{}
13 \newcommand*{\RLmulticolcolumns}{}
14 \newcommand*{\LRmulticolcolumns}{}
15
16 \newlength{\premulticols}
17 \newlength{\postmulticols}

31 }

32 \end{warpHTML}
```

File 241 l warp-multicolrule.sty**§ 339 Package multicolrule**

Pkg **multicolrule** **multicolrule** is ignored.

for HTML output:

```
1 \RequirePackage{multicol}
2
3 \LWR@ProvidesPackageDrop{multicolrule}[2019/01/01]

4 \newcommand*\{SetMCRule}[1]{}
5 \NewDocumentCommand{\DeclareMCRulePattern}{m m}{}
```

File 242 l warp-multimedia.sty**§ 340 Package multimedia**

Pkg **multimedia** **multimedia** is emulated.

The packages **multimedia**, **movie15**, and **media9** are supported.

HTML5 **<audio>** and **<video>** objects are created for **.mp3** and **.mp4** files.

HTML5 **<embed>** objects are created for **http** and **ftp** links.

\bref links are created for other media types. (Unfortunately, there is not much overlap between the file types supported for print output and the file types supported by HTML5.)

For **media9**, a multimedia object is inserted for each **addresource=**, as well as each **flashvars source=** and **src=**. This may result in duplicate objects.

Undesired objects may be nullified by placing them inside **\warpprintonly** or the **warpprint** environment.

Each `HTML` multimedia object includes the poster text, except for `<embed>` objects. For `movie15`, the `text` option is supported to specify the poster text.

The `width`, `height`, and `totalheight` options are supported. The `HTML` object is scaled according to the display width, correctly compensating for either tall or wide viewports.

Other options are ignored.

`media9 \addmediapath` is supported. It is assumed that the same path structure will exist for the `HTML` document.

`HTML5` media controls are always specified for each `<audio>` and `<video>` object.

`media9` slideshows are not supported.

`\hyperlink{movie}`, `\movieref`, and `\mediabutton` are not supported.

3D objects are not supported.

If using a `YOUTUBETM` video, use an “embedded” URL with `.../embed/...` instead of `.../v/...`

for HTML output:

```

1 \LWR@ProvidesPackageDrop{multimedia}[2012/05/02]

2 \LWR@origRequirePackage{l warp-common-multimedia}
3
4 \LetLtxMacro\movie\LWR@multimedia
5 \LetLtxMacro\sound\LWR@multimedia
6
7 \newcommand{\hyperlink{movie}}[3][]{}

```

File 243 **l warp-multirow.sty**

§ 341 Package **multirow**

(Emulates or patches code by PIET VAN OOSTRUM, ØYSTEIN BACHE, JERRY LEICHTER.)

Pkg `multirow` `multirow` is emulated during `HTML` output, and used as-is while inside a `\teximage`.

vposn • Note that recent versions of `multirow` include a new optional `vposn` argument.

multirow cells • For `multirow`, insert `\mrowcell` into any empty multi-row cells. This will be a null function for the print output, and is a placeholder for parsing the table for `HTML` output. An error is generated if this is missed.

```

. . . & \multirow{2}{.5in}{text} & . .
. . . & \mrowcell & . .

```

colored cells • The `multirow` documentation regarding colored cells recommends using a negative number of rows. This will not work with `l warp`, so `\warpprintonly` and `\warpHTMLonly` must be used to make versions for print and `HTML`.

with \multicolumn

⚠ \multicolumn & \multirow

- See section 341.2 for \multicolumnrow.

l warp does not support directly combining \multicolumn and \multirow. Use \multicolumnrow instead. To create a 2 column, 3 row cell:

```
\multicolumnrow{2}{c}[c]{3}[0][1in][0pt]{Text}
```

The two arguments for \multicolumn come first, followed by the five arguments for \multirow, many of which are optional, followed by the contents.

As per \multirow, skipped cells to the right of the \multicolumnrow statement are not included in the source code on the same line. On the following lines, \mcolrowcell must be used for each cell of each column and each row to be skipped. An error is generated if this is missed.

```
. . . & \multicolumnrow{2}{c}[c]{3}[0][1in][0pt]{Text} & . . .
. . . & \mcolrowcell & \mcolrowcell & . . .
. . . & \mcolrowcell & \mcolrowcell & . . .
```

In a `lateximage`, \LWR@restoreorigformatting restores the original print-mode versions.

See section 72.25 for the print-mode versions.

for HTML output:

```
1 \LetLtxMacro{\multirow}{\relax}
2 \LWR@ProvidesPackagePass[multirow][2018/08/03]
```

\LWR@multirowborder Set to left or right to create a thick border for the cell, for use by `bigdelim`:

```
3 \newcommand{\LWR@multirowborder}{}%
```

§ 341.1 Multirow

```
\multirow [⟨vpos⟩] {⟨numrows⟩} [⟨bigstruts⟩] {⟨width⟩} [⟨fixup⟩] {⟨text⟩}
4 \NewDocumentCommand{\LWR@HTML@multirow}{O{c} m o m o +m}%
5 {%
6 \LWR@traceinfo{*** LWR@HTML@multirow #1 #2 #4}%
7 \booltrue{\LWR@usedmultirow}%
8 \LWR@maybenewtablerow%
9 \LWR@tabularleftedge%
```

Print the start of a new table data cell:

```
10 \LWR@htmlltag{td rowspan="#2" %
```

The vertical alignment, if given:

```
11 \IfValueT{\#1}{%
12 \ifstreq{\#1}{b}{\style=\\"LWR@print@mbox{vertical-align:bottom}" }{}%
13 \ifstreq{\#1}{t}{\style=\\"LWR@print@mbox{vertical-align:top}" }{}%
14 }%
```

The left/right border, if given:

```
15 \ifdefvoid{\LWR@multirowborder}{}{%
16 style="\LWR@print@mbox{border-\LWR@multirowborder:} 2px dotted black ; %
17 \LWR@print@mbox{padding-\LWR@multirowborder:} 2px" %
18 }%
```

A class adds the column spec and the rule:

```
19 class="td%"
```

Append this column's spec:

```
20 \LWR@getexpparray{\LWR@tablecols}{\arabic{\LWR@tableLaTeXcolindex}}%
```

If this column has a cmidrule, add “rule” to the end of the HTML class tag. Also add the vertical bar class.

```
21 \LWR@addcmidruletrim%
22 \LWR@addleftmostbartag%
23 \LWR@printbartag{\arabic{\LWR@tableLaTeXcolindex}}%
24 "%

25 \LWR@tdstartstyles%
26 \LWR@addcmidrulewidth%
27 \LWR@addcdashline%
28 \LWR@addtabularrulecolors%
29 \LWR@tdendstyles%
30 }%
```

The column's < spec:

```
31 \LWR@getexpparray{\LWR@colbeforespec}{\arabic{\LWR@tableLaTeXcolindex}}%
```

While printing the text, redefine \\ to generate a new line

```
32 \begingroup\LetLtxMacro{\\\}{\LWR@endofline}\#6\endgroup%
33 \LWR@stoppars%
34 \global\boolfalse{\LWR@intabularmetadata}%
35 \renewcommand{\LWR@multirowborder}{}%
36 \LWR@traceinfo{*** LWR@HTML@multirow done}%
37 }%
38
39 \LWR@formatted{multirow}
```

§ 341.2 Combined multicolumn and multirow

```
\multicolumnrow {<1:cols>} {<2:halign>} [<3:vpos>] {<4:numrows>} [<5:bigstruts>] {<6:width>} [<7:fixup>]
{<8:text>}
```

\@ifpackageLoaded{multirow} determines if v2.0 or later of `multirow` was used, which included the `\ProvidesPackage` macro.

The HTML version follows.

\AtBeginDocument because the print version had to see if `multirow` was loaded before determining how to define \LWR@print@multicolumnrow.

```
40 \AtBeginDocument{
41
42 \NewExpandableDocumentCommand{\LWR@HTML@multicolumnrow}{m m O{} m O{} m O{} +m}{%
43 \booltrue{\LWR@usedmultirow}}%
```

Figure out how many extra HTML columns to add for @ and ! columns:

```
44 \LWR@tabularhtmlcolumns{\arabic{\LWR@tableLaTeXcolindex}}{#1}
```

Create the multicolumn/multirow tag:

```
45 \begingroup%
46 \LetLtxMacro{\LWR@endofline}{\LWR@endofline}%
47 \LWR@domulticolumn[#3][#4]{#1}{\arabic{\LWR@tabhtmlcoltotal}}{#2}{#8}%
48 \endgroup%
```

Move to the next L^AT_EX column:

```
49 \addtocounter{\LWR@tableLaTeXcolindex}{#1}%
50 \addtocounter{\LWR@tableLaTeXcolindex}{-1}%
```

Skip any trailing @ or ! columns for this cell:

```
51 \global\booltrue{\LWR@skipatbang}%
52 }
53
54 \LWR@expandableformatted{multicolumnrow}
55
56 }% \AtBeginDocument
```

File 244 **lwarp-multitoc.sty**

§ 342 Package **multitoc**

Pkg `multitoc` `multitoc` is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{multitoc}[1999/06/08]

```
2 \newcommand{\multicolumntoc}{2}
3 \newcommand{\multicolumnlot}{2}
4 \newcommand{\multicolumnlof}{2}
5 \newcommand*\immediateaddtocontents[2]{}  
-
```

File 245 l warp-musicography.sty**§ 343 Package musicography**

(Emulates or patches code by ANDREW A. CASHNER.)

Pkg musicography musicography is patched for use by l warp.

Images are used for the meter symbols and fingered bass, since the HTML fonts tend not to be the correct size and HTML cannot stack items. The HTML alt tag copies C and 3/2, etc. Hashes are used for the meter images, which are then reused as necessary.

- ⚠ Note that browser support for musical symbols may be buggy. ALT text and copy/paste into a text editor work well.

for HTML output:

```
1 \LWR@ProvidesPackagePass{musicography}[2019/05/28]
2 \NewDocumentCommand{\LWR@HTML@musSymbol}{ O{\musFont} m m m m }{%

```

File 247 **l warp-nameref.sty**

§ 345 Package **nameref**

Pkg nameref nameref is emulated by l warp.
for HTML output: Discard all options for l warp-nameref:

```

1 \PackageInfo{l warp}{%
2 Using the l warp HTML version of package ‘nameref’, \MessageBreak
3 and discarding options.\MessageBreak
4 (Not using \protect\ProvidesPackage, so that other packages\MessageBreak
5 do not attempt to patch l warp’s version of ‘nameref’.)\MessageBreak
6 }
7 \DeclareOption*{}
8 \ProcessOptions\relax

```

File 248 l warp-natbib.sty

§ 346 Package **natbib**

(Emulates or patches code by PATRICK W. DALY.)

Pkg natbib natbib is patched for use by l warp.

for HTML output: 1 \LWR@ProvidesPackagePass{natbib}[2010/09/13]

Replace math < and > with \textless and \textgreater:

A macro to compare:

2 \newcommand{\LWRNB@NAT@open}{\$<\$}

To patch \NAT@open and \NAT@close

```
3 \newcommand{\LWRNB@patchnatbibopenclose}{  
4 \ifdstrequal{\NAT@open}{\LWRNB@NAT@open}  
5 {  
6   \renewcommand{\NAT@open}{\textless}  
7   \renewcommand{\NAT@close}{\textgreater}  
8 }  
9 }
```

Do it now in case angle was selected as an option:

10 \LWRNB@patchnatbibopenclose

Also patch \setcitestyle to patch after settings are made:

```
11 \let\LWRNB@origsetcitestyle\setcitestyle  
12  
13 \renewcommand{\setcitestyle}[1]{%  
14 \LWRNB@origsetcitestyle{#1}%  
15 \LWRNB@patchnatbibopenclose%  
16 }
```

File 249 l warp-nccfancyhdr.sty

§ 347 Package **nccfancyhdr**

(Emulates or patches code by ALEXANDER I. ROZHENKO.)

Pkg nccfancyhdr nccfancyhdr is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{nccfancyhdr}[2004/12/07]

```

2 \newcommand*\{\headrulewidth\}{}  

3 \newcommand*\{\footrulewidth\}{}  

4 \newcommand{\headstrutheight}{}

```

File 250 **l warp-needspace.sty**

§ 348 Package **needspace**

(Emulates or patches code by PETER WILSON.)

Pkg needspace needspace is ignored.

for HTML output: Discard all options for l warp-needspace:

```

1 \LWR@ProvidesPackageDrop{needspace}[2010/09/12]  

2  

3 \DeclareDocumentCommand{\needspace}{m}{}  

4 \DeclareDocumentCommand{\Needspace}{s m}{}

```

File 251 **l warp-nextpage.sty**

§ 349 Package **nextpage**

(Emulates or patches code by PETER WILSON.)

Pkg nextpage nextpage is ignored.

for HTML output: Discard all options for `\warp-nextpage`.

1 \LWR@ProvidesPackageDrop{nextpage}[2009/09/03]

```
2 \DeclareDocumentCommand{\cleartoevenpage}{o}{}  
3 \DeclareDocumentCommand{\movetoevenpage}{o}{}  
4 \DeclareDocumentCommand{\cleartooddpage}{o}{}  
5 \DeclareDocumentCommand{\movetooddpage}{o}{}  
6 \end{document}
```

File 252 **lwarp-nfssext-cfr.sty**

§ 350 Package **nfssext-cfr**

(Emulates or patches code by CLEA F. REES.)

Pkg nfssext-cfr nfssext-cfr is emulated in HTML, and used as-is in print output.

Results depend on the browser's font.

for HTML output: 1 \\\ WR@ProvidesPackagePass{nfssext-cfr}{[2017/03/28]}

Macros which are present in the `lwarp` core are commented out here.

\setnoclub [\langle lines\rangle]
            4 \newcommand*{\noclub}[1][]{}
            5 \newcommand*{\setnoclub}[1][]{}

```

File 262 **l warp-ntheorem.sty**

§ 360 Package **ntheorem**

(Emulates or patches code by WOLFGANG MAY, ANDREAS SCHEDLER.)

Pkg ntheorem ntheorem is patched for use by l warp.

Table 15: Ntheorem package—css styling of theorems and proofs

Theorem: <div> of class theorembody<theoremstyle>

Theorem Header: of class theoremheader<style>

where <theoremstyle> is plain, break, etc.

§ 360.1 Limitations

- ⚠ **Font control** This conversion is not total. Font control is via css, and the custom L^AT_EX font settings are ignored.
- ⚠ **Equation numbering** ntheorem has a bug with equation numbering in A_MS environments when the option thref is used. l warp does not share this bug, so equations with \split, etc, are numbered correctly with l warp's HTML output, but not with the print output. It is recommended to use cleveref instead of ntheorem's thref option.

§ 360.2 Options

Options amsthm or standard choose which set of theorems and proofs to initialize.

- ⚠ **Disabled options** The options thmarks and amsmath are disabled, since they heavily modify the underlying math code. Theorem marks are emulated. The AMS-math modifications are not done.

Option thref is disabled because cleveref functions are used instead. \thref is emulated.

Option hyperref is disabled because l warp emulated hyperref.

for HTML output: Some disabled options:

```

1 \DeclareOption{thref}{}  

2  

3  

4 \newbool{LWR@ntheoremmarks}  

5 \boolfalse{LWR@ntheoremmarks}  

6  

7 \DeclareOption{thmarks}{}  

8 \booltrue{LWR@ntheoremmarks}  

9 \newif\ifsetendmark\setendmarktrue  

10 }  

11  

12  

13 \newbool{LWR@ntheoremamsthm}  

14 \boolfalse{LWR@ntheoremamsthm}  

15  

16 \DeclareOption{amsthm}{\booltrue{LWR@ntheoremamsthm}}  

17  

18  

19 \DeclareOption{amsmath}{}  

```

```

20 \DeclareOption{hyperref}{}%
21
22 \LWR@ProvidesPackagePass{ntheorem}[2011/08/15]

```

§ 360.3 Remembering the theorem style

Storage for the style being used for new theorems.

```

23 \newcommand{\LWR@newtheoremstyle}[1]{plain}

§ 360.4 HTML cross-referencing

Mimics a float by incrementing the float counter and generating an HTML anchor. These are used for list-of-theorem cross-references.

```

165 \newcommand{\LWR@inctheorem}{%
166 \addtocounter{LWR@thisautoid}{1}%
167 \LWR@stoppars%
168 \LWR@htmltag{a id="\LWR@print@mbox{autoid-\arabic{LWR@thisautoid}}"\LWR@htmltag{/a}}%
169 \LWR@startpars%
170 }
```

§ 360.5 \newtheoremstyle

The following are patched for css.

These were in individual files thp.sty for plain, thmb.sty for margin break, etc. They are gathered together here.

Each theorem is encased in a BlockClass environment of class theorembody<style>.

Each header is encased in an \InlineClass of class theoremheader<style>.

```

171 \gdef\newtheoremstyle#1#2#3{%
172   \expandafter\ifundefined{th@#1}%

```

§ 360.7 Additional objects

The following manually adjust the css for the standard configuration objects which are not a purely plain style:

```
256 \ifbool{LWR@ntheoremamsthm}{}{%
```

Upright text via CSS:

```
257     \newtheoremstyle{plainupright}%
258     {\item[%
259         \InlineClass{theoremheaderplain}{##1\ ##2\theorem@separator}]}%
260     {\item[%
261         \InlineClass{theoremheaderplain}{##1\ ##2\ (###3)\theorem@separator}]}%
```

Upright text and small caps header via CSS:

```
262     \newtheoremstyle{nonumberplainuprightsc}%
263     {\item[%
264         \InlineClass{theoremheadersc}{##1\theorem@separator}]}%
265     {\item[%
266         \InlineClass{theoremheadersc}{##1\ (###3)\theorem@separator}]}%
267 }% not amsthm
```

§ 360.8 Renewed standard configuration

The following standard configuration is renewed using the new css:

```
268 \ifbool{LWR@ntheoremamsthm}{}{%

§ 360.12 List-of

Redefined to reuse the float mechanism to add list-of-theorem links:

```
\thm@thmline {\langle 1: printed type\rangle} {\langle 2: #\rangle} {\langle 3: optional\rangle} {\langle 4: page\rangle}
```

```
446 \renewcommand{\thm@thmline@noname}[4]{%
447 \hypertocfloat{1}{theorem}{thm}{#2 #3}{}}%
448 }
449
450 \renewcommand{\thm@thmline@name}[4]{%
451 \hypertocfloat{1}{theorem}{thm}{#1 #2 #3}{}}%
452 }
```

This was redefined by `ntheorem` when loaded, so it is now redefined for `l warp`:

```
453 \def\thm@thmline{\thm@thmline@name}
```

Patch for `css`:

```
454 \def\listtheorems#1{
455 \LWR@htmlelementclass{nav}{lothm}%
456 \begingroup
457 \c@tocdepth=-2%
458 \def\thm@list{\#1}\thm@processlist
459 \endgroup
460 \LWR@htmlelementclassend{nav}{lothm}%
461 }
```

§ 360.13 Symbols

Proof QED symbol:

```
462 \newcommand{\qed}{\qquad\the\qedsymbol}
463
464 \AtBeginDocument{
465 \@ifundefined{LWR@orig@openbox}{
466 \LetLtxMacro{\LWR@orig@openbox}{\openbox}
467 \LetLtxMacro{\LWR@orig@blacksquare}{\blacksquare}
468 \LetLtxMacro{\LWR@orig@Box}{\Box}
469
470 \def\openbox{\text{\HTMLunicode{25A1}}}% UTF-8 white box
471 \def\blacksquare{\text{\HTMLunicode{220E}}}% UTF-8 end-of-proof
472 \def\Box{\text{\HTMLunicode{25A1}}}% UTF-8 white box
473
474 \appto{\LWR@restoreorigformatting}{%
475 \LetLtxMacro{\openbox}{\LWR@orig@openbox}%
476 \LetLtxMacro{\blacksquare}{\LWR@orig@blacksquare}%
477 \LetLtxMacro{\Box}{\LWR@orig@Box}%
478 }% appto
```

```
479 }{ }% @ifundefined
480 }% AtBeginDocument
```

§ 360.14 Cross-referencing

```
\thref {\langle label \rangle}

481 \newcommand*{\thref}[1]{\cref{#1}}%
```

File 263 **l warp-octave.sty**

§ 361 Package **octave**

(Emulates or patches code by ANDREW A. CASHNER.)

Pkg octave octave is patched for use by l warp.

for HTML output 1 \LWR@ProvidesPackagePass{octave}[2017/10/31]

Remove the leading 1pt kern:

```
2 \RenewDocumentCommand{\@PrintTicks}{ m }{%
3 \kern-1pt% l warp
4 \@TickNum = #1%
5 \loop
6 \@Tick{}%
7 \advance\@TickNum by -1
8 \ifnum\@TickNum > 0
9 \repeat
10 }
```

Use unicode for the prime character:

```
11 \RenewDocumentCommand{\@Tick}{}{\HTMLunicode{2032}}
```

Catch the inline font:

```
12 \RenewDocumentCommand{\pitch}{ m o m }{%
13 \if@OctaveNumber%
14 {%
15     \pitchfont{%
16         \LWR@textcurrentfont% l warp
17         \MakeUppercase{#1}%
18         \IfValueTF{#2}{#2}{\textsubscript{#3}}%
19     }%
20 }%
21 }%
22 \else%
23 {%
24     \pitchfont{%
25         \LWR@textcurrentfont% l warp
26         \GetOctaveTick{#1}{#2}{#3}%
27     }%
28 }%
29 }%
30 }
```

```

27      }%
28      }%
29 }%
30 \fi%
31 }

```

The original was hard to adapt to l warp's handling of &.

```

32 \StartDefiningTabulars
33 \renewcommand{\octavetable}{%
34 \begin{tabular}{ll}
35 \octaveprimes \pitch{C}{0} & \octavenumbers \pitch{C}{0} \\

42 \octaveprimes \pitch{C}{7} & \octavenumbers \pitch{C}{7} \\
43 \end{tabular}
44 }
45 \StopDefiningTabulars

```

File 264 l warp-overpic.sty

§ 362 Package overpic

(Emulates or patches code by ROLF NIEPRASCHK.)

Pkg overpic overpic is patched for use by l warp.

⚠ **scaling** The macros \overpicfontsize and \overpicfontskip are used during HTML generation. These are sent to \fontsize to adjust the font size for scaling differences between the print and HTML versions of the document. Renew these macros before using the overpic and Overpic environments.

See section 84.2 for the print-mode version of \overpicfontsize and \overpicfontskip.

for HTML output: 1 \LWR@ProvidesPackagePass{overpic}[2017/10/06]

```

2 \newcommand*\overpicfontsize{12}
3 \newcommand*\overpicfontskip{14}
4
5 \BeforeBeginEnvironment{overpic}{%
6   \begin{lateximage}%
7   \fontsize{\overpicfontsize}{\overpicfontskip}%
8   \selectfont%
9 }
10
11 \AfterEndEnvironment{overpic}{\end{lateximage}}
12
13 \BeforeBeginEnvironment{Overpic}{%
14   \begin{lateximage}%

```

```
15 \fontsize{\overpicfontsize}{\overpicfontskip}%
16 \selectfont%
17 }
18
19 \AfterEndEnvironment{Overpic}{\end{lateximage}}
```

File 265 l warp-pagegrid.sty**§ 363 Package pagegrid**

Pkg pagegrid pagegrid is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{pagegrid}[2016/05/16]
2 \newcommand*{\pagegridsetup}[1]{}

File 266 l warp-pagenote.sty**§ 364 Package pagenote**

Pkg pagenote pagenote works as-is, but the page option is disabled.

for HTML output: 1 \DeclareOption{page}{}
2 \LWR@ProvidesPackagePass{pagenote}[2009/09/03]

File 267 l warp-pagesel.sty**§ 365 Package pagesel**

Pkg pagesel pagesel is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{pagesel}[2016/05/16]

File 268 l warp-paralist.sty**§ 366 Package paralist**

(Emulates or patches code by BERND SCHANDL.)

Pkg paralist paralist is supported with minor changes.

for HTML output: 1 \LWR@ProvidesPackagePass{paralist}[2017/01/22]

The compact environments are identical to the regular ones:

```

2 \LetLtxMacro\compactitem\itemize
3 \LetLtxMacro\compactenum\enumerate
4 \LetLtxMacro\compactdesc\description
5 \LetLtxMacro\endcompactitem\enditemize
6 \LetLtxMacro\endcompactenum\endenumerate
7 \LetLtxMacro\endcompactdesc\enddescription

```

For the inline environments, revert \item to its original print-mode version:

```

8 \AtBeginEnvironment{inparaitem}{\LetLtxMacro\item\lwr@origitem}
9 \AtBeginEnvironment{inparaenum}{\LetLtxMacro\item\lwr@origitem}
10 \AtBeginEnvironment{inparadesc}{\LetLtxMacro\item\lwr@origitem}

```

Manual formatting of the description labels:

```
11 \def\paradescriptionlabel#1{{\normalfont\textbf{#1}}}
```

File 269 l warp-parnotes.sty

§ 367 Package **parnotes**

(Emulates or patches code by CHELSEA HUGHES.)

Pkg parnotes parnotes is supported with some patches.

for HTML output: 1 \lwr@ProvidesPackagePass{parnotes}[2016/08/15]

```

2 \long\def\PN@parnote@real#1#2{%

Pkg pdfsync pdfsync is ignored.

for HTML output: Discard all options for l warp-pdfsync:

1 \LWR@ProvidesPackageDrop{pdfsync}[2008/01/26]
2 \newcommand*{\pdfsync}{}
3 \newcommand*{\pdfsyncstart}{}
4 \newcommand*{\pdfsyncstop}{}

File 280 l warp-pdftricks.sty**§ 378 Package pdftricks**

(Emulates or patches code by C. V. RADHAKRISHNAN, C. V. RAJAGOPAL, ANTOINE CHAMBERT-LOIR.)

Pkg pdftricks pdftricks is patched for use by l warp.

⚠ convert image files The pdftricks image files <jobname>-fig*.pdf must be converted to .svg, or else a missing file error will occur. The image files must also be converted again whenever they change. To convert the images:

Enter ⇒ **l warpmk pdftosvg <jobname>-fig*.pdf**

for HTML output: 1 \LWR@ProvidesPackagePass{pdftricks}[2003/08/10]

Reuse the print-mode images:

2 \def\PDFTfigname{\BaseJobname-fig\thePSfig}

If the .pdf images have not yet been converted to .svg then an error about a missing file will occur. Warn the user to convert the images.

```
3 \PackageWarning{l warp-pdftricks}{  
4 When the pdftricks images change,  
5 remember to convert PDF images to SVG using 'l warpmk pdftosvg *-fig.pdf',  
6 }  
7  
8 \AfterEndDocument{\typeout{***}}  
9 \AfterEndDocument{\typeout{*** Note: If pdftricks images are not found, new, or updated,}}  
10 \AfterEndDocument{\typeout{*** \space use 'l warpmk pdftosvg \BaseJobname-fig*.pdf'}}}  
11 \AfterEndDocument{\typeout{***}}
```

File 281 **l warp-pd氟x.sty**

§ 379 Package **pd氟x**

Pkg pd氟x pd氟x is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{pd氟x}[2017/05/18]

File 282 **l warp-perpage.sty**

§ 380 Package **perpage**

(Emulates or patches code by DAVID KASTRUP.)

Pkg perpage perpage is mostly ignored, but support is added for footnote counters.

There is no page number in HTML, so most counters are not reset. If the document redefines \the<countername> to include \theperpage, it is necessary to place that redefinition inside a warpprint environment to avoid modifying the HTML definitions.

\AddAbsoluteCounter must not be inside warpprint, as the counter must be added for HTML also, although it is not incremented.

footnote numbering To have footnote numbers reset each time footnotes are printed:

```
\setcounter{footnoteReset}{1}
```

For bigfoot, manyfoot, or perpage:

```
\MakePerPage{footnoteX}  
— or —  
\MakeSortedPerPage{footnoteX}
```

The footnotes are reset when they are printed, according to section level as set by FootnoteDepth, which is not necessarily by HTML page. This is recommended for

\alph, \Alph, or \fnsymbol footnotes, due to the limited number of symbols which are available.

for HTML output: 1 \LWR@ProvidesPackageDrop{perpage}[2014/10/25]

```

2 \newcommand\AddAbsoluteCounter[1]
3 {
4     \@ifundefined{c@abs#1}{%
5         \expandafter\newcount\csname c@abs#1\endcsname
6         \global\value{abs#1}@ne

14 \let\@makerotcaption\@makecaption
```

File 316 **l warp-rotfloat.sty**

§ 414 Package **rotfloat**

(Emulates or patches code by AXEL SOMMERFELDT.)

Pkg **rotfloat** **rotfloat** is emulated.

for HTML output: 1 \LWR@ProvidesPackageDrop{rotfloat}[2004/01/04]
2
3 \RequirePackage{float}

\newfloat {\langle 1: type \rangle} {\langle 2: placement \rangle} {\langle 3: ext \rangle} [{\langle 4: within \rangle}]

Emulates the \newfloat command from the float package. Sideways floats are \let to the same as regular floats.

“placement” is ignored.

```
4 \RenewDocumentCommand{\newfloat}{m m m o}{%
5 \IfValueTF{#4}{%
```

```

6 {%
7   \DeclareFloatingEnvironment[fileext=#3,within=#4]{#1}%
8 }%
9 {%
10  \DeclareFloatingEnvironment[fileext=#3]{#1}%
11 }%
12 \csletcs{sideways#1}{#1}%
13 \csletcs{endsideways#1}{end#1}%

```

Remember the float style:

```

14 \csedef{LWR@floatstyle@#1}{\LWR@floatstyle}%
15 \csedef{LWR@floatstyle@sideways#1}{\LWR@floatstyle}%

```

`newfloat` package automatically creates the `\listof` command for new floats, but `float` does not, so remove `\listof` here in case it is manually created later:

```

16 \cslet{\listof#1s}\relax%
17 \cslet{\listof#1es}\relax%
18 \cslet{\listofsideways#1s}\relax%
19 \cslet{\listofsideways#1es}\relax%
20 }

```

File 317 **l warp-rviewport.sty**

§ 415 Package **rviewport**

Pkg `rviewport` `rviewport` is honored inside a `lateximage`, and otherwise ignored for `HTML` output.

If `rviewport` is important for an image, enclose the image inside a `lateximage` environment.

for HTML output:

```

1 \LWR@ProvidesPackagePass{rviewport}[2011/08/27]

2 \define@key{igraph}{rviewport}{}}

```

File 318 **l warp-savetrees.sty**

§ 416 Package **savetrees**

Pkg `savetrees` `savetrees` is ignored.

for HTML output: Discard all options for `l warp-savetrees`:

```

1 \LWR@ProvidesPackageDrop{savetrees}[2016/04/13]

```

File 319 l warp-scalefnt.sty**§ 417 Package scalefnt**

File 332 **lwarf-shadow.sty**

§ 430 Package **shadow**

(Emulates or patches code by MAURO ORLANDINI.)

Pkg shadow shadow is emulated.

for HTML output: Discard all options for lwarf-shadow:

```
1 \LWR@ProvidesPackageDrop{shadow}[2003/02/19]
```

```

2 \newdimen\sboxsep
3 \newdimen\sboxrule
4 \newdimen\sdim
5
6 \newcommand{\shabox}[1]{%
7 \InlineClass{shabox}{#1}%
8 }
```

File 333 l warp-shapepar.sty**§ 431 Package shapepar**

(Emulates or patches code by DONALD ARSENEAU.)

Pkg shapepar shapepar is patched for use by l warp. Shapes appear in print mode, as well as inside a lateximage, but are ignored for HTML.

for HTML output: 1 \LWR@ProvidesPackagePass{shapepar}[2013/03/26]

```
2 \newcommand*{\LWR@HTML@shapepar}[2][]{}
3 \LWR@formatted{shapepar}
4
5 \NewDocumentCommand{\LWR@HTML@cutout}{m d()}{}
6 \LWR@formatted{cutout}
```

File 334 l warp-showidx.sty**§ 432 Package showidx**

Pkg showidx showidx is ignored.

for HTML output: Discard all options for l warp-showidx:

1 \LWR@ProvidesPackageDrop{showidx}[2014/09/29]

\@wrindex is redefined \AtBeginDocument by the l warp core.

File 335 l warp-showkeys.sty**§ 433 Package showkeys**

(Emulates or patches code by DAVID CARLISLE, MORTEN HØGHOLM.)

Pkg showkeys showkeys is ignored.

for HTML output: Discard all options for l warp-showkeys:

1 \LWR@ProvidesPackageDrop{showkeys}[2014/10/28]

```
2 \NewDocumentCommand{\showkeys}{s}{}{}
```

File 336 **l warp-showtags.sty**

§ 434 Package **showtags**

Pkg showtags showtags is ignored.

for HTML output:

```
1 \LWR@ProvidesPackageDrop{showtags}%
no version is given

2 \newcommand{\thecitetag}[1]{}
```

File 337 **l warp-sidecap.sty**

§ 435 Package **sidecap**

(Emulates or patches code by ROLF NIEPRASCHK, HUBERT GÄSSLEIN.)

Pkg sidecap sidecap is emulated.

for HTML output: Discard all options for l warp-sidecap.

```
1 \LWR@ProvidesPackageDrop{sidecap}[2003/06/06]
```

```

File 338 **l warp-sidenotes.sty**

§ 436 Package **sidenotes**

(Emulates or patches code by ANDY THOMAS, OLIVER SCHEBAUM.)

Pkg sidenotes Patched for l warp.

for HTML output: Load the original package:

```
1 \LWR@ProvidesPackagePass{sidenotes}
```

The following patch sidenotes for use with l warp:

```
\sidecaption * [<entry>] [<offset>] {<text>}
 2 \RenewDocumentCommand \sidecaption {s o o +m}
 3 {
 4   \LWR@stoppars
 5   \begingroup
 6   \captionsetup{style=sidecaption}
 7   \IfBooleanTF{#1}
 8   { % starred
 9     \begin{BlockClass}[border:none ; box-shadow:none]{marginblock}
10     \caption*{#4}
11     \end{BlockClass}
12   }
13   { % unstarred
14     \IfNoValueOrEmptyTF{#2}
15     {\def\@sidenotes@sidecaption@tof{#4}}
16     {\def\@sidenotes@sidecaption@tof{#2}}
17     \begin{BlockClass}[border:none ; box-shadow:none]{marginblock}
18     \caption[\@sidenotes@sidecaption@tof]{#4}
19     \end{BlockClass}
20   }
21   \endgroup
22   \LWR@startpars
23 }
```

Borrowed from the l warp version of keyfloat:

```
24 \NewDocumentEnvironment{KFLT}sidenotes@marginfloat}{O{-1.2ex} m}
25 {%
26   \LWR@BlockClassWP{float:right; width:2in; margin:10pt}{}{marginblock}%
27   \captionsetup{type=#2}%
28 }
29 {%
30   \endLWR@BlockClassWP
31 }
32
33 \RenewDocumentEnvironment{marginfigure}{o}
```

```

34 {\begin{KFLT}sidenotes@marginfloat}{figure}}
35 {\end{KFLT}sidenotes@marginfloat}
36
37 \RenewDocumentEnvironment{marginstable}{o}
38 {\begin{KFLT}sidenotes@marginfloat}{table}}
39 {\end{KFLT}sidenotes@marginfloat}

```

The following were changed by `sidenotes`, and now are reset back to their `l warp`-supported originals:

Restoring the definition from the L^AT_EX 2_E `article.cls` source:

```

40 \renewenvironment{figure*}
41         {\@dblflo@t{figure}}
42         {\end@dblflo@t}
43
44 \renewenvironment{table*}
45         {\@dblflo@t{table}}
46         {\end@dblflo@t}

```

File 339 **l warp-SIunits.sty**

§ 437 Package **Slunits**

(Emulates or patches code by MARCEL HELDOORN.)

Pkg `SIunits` `Slunits` is patched for use by `l warp`.

It is recommended to use `\unit` where possible, which combines the entire expression into a single `lateximage`, and adds the `alt` tag containing the L^AT_EX code, allowing for copy/paste. When units are used outside of the `\unit` macro, each unit macro will have its own `lateximage`, and each will have the `alt` tag set according to `\MathImageAltText`, which defaults to `(math image)`.

for HTML output: 1 \LWR@ProvidesPackagePass[SIunits][2007/12/02]

Patched for copy/paste with the HTML `alt` tag:

```

2 \DeclareRobustCommand{\unit}[2]{%
3 \@inunitcommandtrue%    original
4 \LWR@subsingle dollar*% l warp
5 {% alt tag
6     \textbackslash{}unit\{\LWR@HTMLsanitize{\#1}\}%
7     \{ \LWR@HTMLsanitize{\#2}\}% extra space
8 }%
9 {SIunits}% add'l hashing
10 {%
11     \LWR@origensuredmath{%
12         \SIEfstyle{\#1\@qsk\period@active{\#2}}% original
13     }%
14 }% contents
15 \@inunitcommandfalse%    original
16 }

```

File 340 **l warp-siunitx.sty**

§ 438 Package **siunitx**

(Emulates or patches code by JOSEPH WRIGHT.)

Pkg siunitx siunitx is patched for use by l warp.

fractions Due to *pdftotext* limitations, fraction output is replaced by symbol output for per-mode and quotient-mode.

⚠ **math mode required** Some units will require that the expression be placed inside math mode.

NOTE: As of this writing, the **siunitx** extension for MATHJAX is not currently hosted at any public CDN, thus **siunitx** is not usable with MATHJAX unless a local copy of this extension is created first. See \MathJaxFilename to select a custom MathJax script.

⚠ **tabular** Tabular S columns are rendered as simple c columns, and tabular s columns are not supported. These may be replaced by c columns with each cell contained in \num or \si.

for HTML output:

```

1 \RequirePackage{xcolor}%
2   for \convertcolorspec
3 \LWR@ProvidesPackagePass{siunitx}[2018/05/17]
```

```

4 \AtBeginDocument{%
5   \DeclareSIUnit\bohr{\textit{a}\textsubscript{0}}
6   \DeclareSIUnit\clight{\textit{c}\textsubscript{0}}
7   \DeclareSIUnit\elementarycharge{\textit{e}}
8   \DeclareSIUnit\electronmass{\textit{m}\textsubscript{e}}
9   \DeclareSIUnit\hartree{\textit{E}\textsubscript{h}}
10  \DeclareSIUnit\planckbar{\LWR@siunitx@textplanckbar}
11 }% AtBeginDocument
```

\@ensuredmath is not supported inside an \hbox, so it must temporarily be restored to its original. Similar for \mbox. SVG math is created explicitly when necessary, using \LWR@subsingle dollar.

```

12
13 \ExplSyntaxOn
14 %
```

```

File 343 **l warp-soulpos.sty**

§ 441 Package **soulpos**

(Emulates or patches code by JAVIER BEZOS.)

Pkg soulpos soulpos is emulated.

for HTML output:

```
1 \RequirePackage{soul}
2 \RequirePackage{soulutf8}
3 \LWR@ProvidesPackageDrop{soulpos}[2012/02/25]

4 \NewDocumentCommand{\ulposdef}{m o m} {}
5
6 \newdimen\ulwidth
7
8 \newcommand\ifulstarttype[1]{%
9 \expandafter\@secondoftwo%
10 }
11
12 \newcommand\ifulendtype[1]{%
13 \expandafter\@secondoftwo%
14 }
15
16 \newcommand{\ulstarttype}{0}
17 \newcommand{\ulenctype}{0}
18 \newcommand{\ulpostolerance}{0}%
```

File 344 **l warp-soulutf8.sty**

§ 442 Package **soulutf8**

Pkg soulutf8 soulutf8 is emulated.

l warp's HTML output naturally supports UTF-8 encoding.

for HTML output:

```
1 \LWR@ProvidesPackageDrop{soulutf8}[2016/05/16]
2 \RequirePackage{soul}
```

File 345 **l warp-splitidx.sty**

§ 443 Package **splitidx**

(Emulates or patches code by MARKUS KOHM.)

Pkg **splitidx** **splitidx** is patched for use by **l warp**.

If the **latexmk** option is selected for **l warp**, **latexmk** will compile the document but will *not* compile the indexes. **l warpmk printindex** and **l warpmk htmlindex** will still be required.

 **\thepage** When using **\AtWriteToIndex** or **\AtNextWriteToIndex**, the user must not refer to **\thepage** during **HTML** output, as the concept of a page number is meaningless. Instead, do

```
\addtocounter{LWR@autoindex}{1}
\LWR@new@label{\LWRindex-\arabic{LWR@autoindex}}
```

where the **\index**-like action occurs, and then refer to **\arabic{LWR@autoindex}** instead of **\thepage** where the reference should occur.

See section [536.17](#) in the **l warp-patch-memoir** package for the **\@@wrspindexhyp** macro as an example.

for HTML output: 1 **\LWR@ProvidesPackagePass{splitidx}[2016/02/18]**

```
2 \catcode`\_=12%
3 \xpatchcmd{\newindex}
4   {\jobname-#2.idx}
5   {\jobname-#2_html.idx}
6   {}
7   {\LWR@patcherror{splitidx}{\newindex}}
8 \catcode`\_=8%
```

Patched to use **l warp**'s automatic indexing counter instead of **\thepage**:

```
9 \renewcommand*{\wrsindex}[2][]%
10 \ifx\relax#1\relax
11   \if@splitidx
12     \@wrsindex[idx]{#2}%
13   \else
14     \def\@tempa{#2}%
15     \if@verbindex\onelevel@sanitize\@tempa\fi
16     \@wrindex{\@tempa}%
17   \fi
18 \else
19   \def\@tempa{#2}%
20   \csname index@\#1@hook\endcsname
21 %   \expandafter\ifx\csname @@wrsindex\endcsname\relax
```

```

22 \addtocounter{LWR@autoindex}{1}%
23 \LWR@newlabel{LWRindex-\arabic{LWR@autoindex}}% lwarp
24 %     \@@@wrsindex{#1}{{\@tempa}{\thepage}}%
25     \@@@wrsindex{#1}{{\@tempa}{\arabic{LWR@autoindex}}}%
26 %
27 %     \else
28 %         \def@\tempb{\@@@wrsindex{#1}}%
29 %         \expandafter\@tempb\@tempa|\\%
30 %     \fi
31 \endgroup
32 \esphack
33 }

```

lwarp defines sectioning commands with `xparse`, so the below patches are done as temporary redefinitions instead of being `\let`.

```

34 \xpatchcmd{\printsubindex}
35   {\let\section\subsection}
36   {\renewcommand*{\section}{\subsection}}
37   {}
38   {\LWR@patcherror{splitidx}{printsubindex-section}}
39
40 \xpatchcmd{\printsubindex}
41   {\let\chapter\section}
42   {\renewcommand*{\chapter}{\section}}
43   {}
44   {\LWR@patcherror{splitidx}{printsubindex-chapter}}
45
46 \xpatchcmd{\printsubindex}
47   {\let\@makechapterhead\section}
48   {\def\@makechapterhead{\section}}
49   {}
50   {\LWR@patcherror{splitidx}{printsubindex-chapter}}

```

File 346 **lwarp-srcltx.sty**

§ 444 Package **srcltx**

Pkg **srcltx** **srcltx** is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{srcltx}[2006/11/12]

```

2 \newif\ifSRCOK \SRCOKfalse
3 \newcommand*\srcIncludeHook[1]{}
4 \newcommand*\srcInputHook[1]{}

8 \gdef\CurrentInput{\MainFile}
9 \newcommand\Input{}
10 \let\Input\input

```

File 347 l warp-srctex.sty**§ 445 Package srctex**

Pkg srctex srctex is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{srctex}[2006/11/12]
2 \LWR@origRequirePackage{l warp-srcltx}

File 348 l warp-stabular.sty**§ 446 Package stabular**

(Emulates or patches code by SIGITAS TOLUŠIS.)

Pkg stabular stabular is emulated.

for HTML output: 1 \LWR@ProvidesPackageDrop{stabular}[2014/03/20]

Env stabular [$\langle vpos \rangle$] [$\langle colspec \rangle$]
2 \newenvironment{stabular}[2][c]
3 {
4 \begin{tabular}[\#1]{\#2}
5 \renewcommand{\noalign}{[1]}{}
6 }
7 {\end{tabular}}

Env stabular [$\langle width \rangle$] [$\langle vpos \rangle$] [$\langle colspec \rangle$]
8 \NewDocumentEnvironment{stabular*}{m o m}
9 {
10 \begin{tabular}[#2]{#3}
11 \renewcommand{\noalign}{[1]}{}
12 }
13 {\end{tabular}}

File 349 l warp-stackengine.sty**§ 447 Package stackengine**

(Emulates or patches code by STEVEN B. SEGETES.)

Pkg stackengine stackengine is patched for use by l warp.

for HTML output: 1 \LWR@ProvidesPackagePass{stackengine}[2017/02/13]

The original version is necessary for the patched `\@stack` and `\stackanchor`, where nesting `lateximage`s does not work:

```

2 \LetLtxMacro{\LWR@orig@stackengine}{\stackengine}

3 \renewcommand*{\stackengine}[8]{%
4     \ifstreq{\#4}{0}{%
5         {\begin{ lateximage }[\ImageAltText] }%
6         {\begin{ lateximage }[\ImageAltText][]{vertical-align:top} }%
7         \LWR@orig@stackengine{\#1}{\#2}{\#3}{\#4}{\#5}{\#6}{\#7}{\#8}%
8     \end{ lateximage }%
9 }

```

`\@stack` uses a `lateximage` with a vertical alignment:

```

10 \LetLtxMacro{\LWR@orig@@stack}{\stack}
11
12 \xpatchcmd{\LWR@orig@@stack}{\stackengine}{\LWR@orig@stackengine}
13     {}
14     {\LWR@patcherror{stackengine}{\LWR@orig@@stack}}
15
16 \renewcommand*{\@stack}[4]{%
17     \ifstreq{\#3}{0}{%
18         {\begin{ lateximage }[\ImageAltText] }%
19         {\begin{ lateximage }[\ImageAltText][]{vertical-align:top} }%
20         \LWR@orig@@stack{\#1}{\#2}{\#3}{\#4}%
21     \end{ lateximage }%
22 }

```

The lapping macros are disabled for HTML:

```

23 \newcommand*{\LWR@HTML@stacklap}[4]{\#3}
24 \LWR@formatted{\stacklap}

```

`\stackanchor` is patched for two instances of `\stackengine`. A `lateximage` with vertical alignment is used.

```

25 \xpatchcmd{\stackanchor}{\stackengine}{\LWR@orig@stackengine}
26     {}
27     {\LWR@patcherror{stackengine}{stackanchor patch 1}}
28
29 \xpatchcmd{\stackanchor}{\stackengine}{\LWR@orig@stackengine}
30     {}
31     {\LWR@patcherror{stackengine}{stackanchor patch 2}}
32
33 \xpretocmd{\stackanchor}
34     {\begin{ lateximage }[\ImageAltText][]{vertical-align:middle} }%
35     {}
36     {\LWR@patcherror{stackengine}{stackanchor pre}}
37
38 \xapptocmd{\stackanchor}{\end{ lateximage } }
39     {}
40     {\LWR@patcherror{stackengine}{stackanchor app}}

```

\Centerstack is simply placed inside a `lateximage` with a vertical alignment:

```

41 \xpretocmd{\Centerstack}
42   {\begin{lateximage}[\ImageAltText][][vertical-align:middle]}
43   {}
44   {\LWR@patcherror{stackengine}{Centerstack pre}}
45
46 \xapptocmd{\Centerstack}{\end{lateximage}}
47   {}
48   {\LWR@patcherror{stackengine}{Centerstack app}}

```

\savestack reverts to print mode while saving the box, then places it inside a `lateximage` when used:

```

49 \renewcommand*\savestack[2]{%
50   \xdef\sv@name{\stack@macro@name{\#1}}%
51   \@ifundefined{\sv@name content}{%
52     \expandafter\newsavebox\expandafter{\csname\sv@name content\endcsname}%
53   }{}%
54   \begingroup%    lwarp
55   \LWR@restoreorigformatting%    lwarp
56   \RenewDocumentEnvironment{lateximage}{s o s o o}{\begin{#1}\end{#1}}{\end{#1}}% lwarp: inside group
57   \expandafter\lW\@g savebox\csname\sv@name content\endcsname{\#2}%
58   \expandafter\gdef\expandafter#1\expandafter{%
59     \expandafter\begin\expandafter{lateximage\expandafter}%
60     \expandafter\usebox\expandafter%
61     {\csname\sv@name content\endcsname}%
62     \expandafter\end\expandafter{lateximage\expandafter}%
63   }%
64   \endgroup%    lwarp
65 }

```

File 350 **lwarp-stfloats.sty**

§ 448 Package **stfloats**

Pkg stfloats stfloats is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{stfloats}[2017/03/27]

stfloats may have been preloaded by a `ltj*` class.

The following are provided in case they have not yet been defined:

```

2 \providecommand*\fnbelowfloat(){}
3 \providecommand*\fnunderfloat(){}
4 \providecommand*\setbaselinefloat(){}
5 \providecommand*\setbaselinefixed(){}

```

Nullified for HTML:

```
6 \renewcommand*\fnbelowfloat{}
```

```
7 \renewcommand*\{\fnunderfloat}{}
8 \renewcommand*\{\setbaselinefloat}{}
9 \renewcommand*\{\setbaselinefixed}{}
```

File 351 **l warp-struktex.sty**

§ 449 Package **struktex**

(Emulates or patches code by JOBST HOFFMANN.)

Pkg struktex struktex is patched for use by l warp.

for HTML output: 1 \LWR@ProvidesPackagePass{struktex}[2018/06/04]

```
2 \BeforeBeginEnvironment{struktogramm}{%
3   \begin{lateximage}[-struktex-\PackageDiagramAltText]%
4 }
5 \AfterEndEnvironment{struktogramm}{\end{lateximage}}
6
7 \newenvironment{\LWR@HTML@centerNss}{\begin{center}}{\end{center}}
8 \LWR@formattedenv{centerNss}
9
10 \newcommand{\LWR@HTML@CenterNssFile}[1]{%
11   \begin{center}
12   \input{#1.nss}
13   \end{center}
14 }
15 \LWR@formatted{CenterNssFile}
16
17 \newcommand{\LWR@HTML@centerNssfile}{\LWR@HTML@CenterNssFile}
18 \LWR@formatted{centerNssfile}
```

File 352 **l warp-subcaption.sty**

§ 450 Package **subcaption**

(Emulates or patches code by AXEL SOMMERFELDT.)

Pkg subcaption subcaption is patched for use by l warp.

for HTML output: 1 \LWR@ProvidesPackagePass{subcaption}[2018/05/01]

Tells l warp to ignore minipage widths inside a subfigure or subtable. In print mode the minipages are used to place the items next to each other. In HTML they are placed side-by-side automatically.

```
2 \ifdef{\subcaption@minipage}{%
3   \xpatchcmd{\subcaption@minipage}{%
4     {\minipage}%
5     {\minipagewidth\minipage}}
```

```

6      {}
7      {\LWR@patcherror{subcaption}{subcaption@minipage}}
8 }{}

```

Likewise for a \subcaptionbox:

```

9 \ifdef{\subcaptionbox} {
10   \xpretocmd{\subcaptionbox} {
11     {\minipagefullwidth}
12   }
13   {\LWR@patcherror{subcaption}{subcaptionbox}}
14 }{}

```

File 353 **l warp-subfig.sty**

§ 451 Package **subfig**

(Emulates or patches code by STEVEN DOUGLAS COCHRAN.)

Pkg **subfig** **subfig** is supported and patched by **l warp**.

⚠ **lof/lotdepth** At present, the package options for `lofdepth` and `lotdepth` are not working. These counters must be set separately after the package has been loaded.

In the document source, use `\hfill` and `\hspace*` subfig>inline between subfigures to spread them apart horizontally. The use of other forms of whitespace may cause paragraph tags to be generated, resulting in subfigures appearing on the following lines instead of all on a single line.

for HTML output: Accept all options for **l warp-subfig**:

```
1 \LWR@ProvidesPackagePass{subfig}[2005/06/28]
```

\sf@@@subfloat {<1 type>} [<2 LOF entry>] [<3 caption>] [<4 contents>]

The outer minipage allows side-by-side subfloats with `\hfill` between.

```

2 \long\def\sf@@@subfloat#1[#2][#3]{%
3 \begin{minipage}{\linewidth}\l warp
4 \IfValueTF{#2}{%
5   \LWR@setlatestname{#2}%
6 }{%
7   \IfValueTF{#3}{%
8     \LWR@setlatestname{#3}%
9   }{%

```

\subfloat@label Patches for \sf@sub@label:

```

174 \def\subfloat@label{%
175 \LWR@ensuredoingapar% lwarp
176 \@ifnextchar(% %) match left parenthesis
177 {\sf@sub@label}
178 {\sf@sub@label(Sub@\capttype\space
179     \@ifundefined{thechapter}{}{\@nameuse{thechapter}\space}%
180     \@nameuse{p@sub@\capttype}%
181     \@nameuse{thesub@\capttype}.)}}}
```

Patches for \subref.

\sf@subref {<label>}

The unstarred version uses a \ref link whose printed text comes from the sub@<label>:

```

182 \renewcommand{\sf@subref}[1]{%
183 \LWR@subnewref{\#1}{sub@\#1}%
184 }
```

\sf@subref {<label>}

The starred version uses the printed sub@<label> which is stored as if it were a page number:

```
185 \renewcommand{\sf@subref}[1]{\LWR@orig@pageref{sub@\#1}}
```

Defining new subfloats. The l@sub<type> for each is redefined.

\@newsubfloat [{<keys/values>}] {<float name>}

```

186 \LetLtxMacro{\LWR@orig@newsubfloat}{\@newsubfloat}
187
188 \def\@newsubfloat[#1]#2{%
189 \LWR@orig@newsubfloat[#1]{#2}%
190 \renewcommand{\l@sub#2}[2]{\hypertocfloat{2}{sub#2}{\ext@sub#2}{##1}{##2}}%
191 }
```

Pre-defined for figures and tables:

\l@subfigure {<text>} {<pagenum>}

```
192 \renewcommand{\l@subfigure}[2]{\hypertocfloat{2}{subfigure}{lof}{#1}{#2}}
```

\l@subtable {<text>} {<pagenum>}

```
193 \renewcommand{\l@subtable}[2]{\hypertocfloat{2}{subtable}{lot}{#1}{#2}}
```

File 367 l warp-theorem.sty**§ 465 Package **theorem****

(Emulates or patches code by FRANK MITTELBACH.)

Pkg **theorem** **theorem** is patched for use by **l warp**.

for HTML output: 1 \LWR@ProvidesPackagePass{theorem}[2014/10/28]

 Table 16: Theorem package—css styling of theorems and proofs

Theorem: <div> of class theorembody<theoremstyle>

Theorem Header: of class theoremheader

where <theoremstyle> is plain, break, etc.

§ 465.1 Remembering the theorem style

Storage for the style being used for new theorems:

```
2 \newcommand{\LWR@newtheoremstyle}{plain}
```

Patched to remember the style being used for new theorems:

```
3 \gdef\theoremstyle#1{%
4   \@ifundefined{th@#1}{\@warning
5     {Unknown theoremstyle '#1'. Using 'plain'}%
6     \theorem@style{plain}%
7     \renewcommand{\LWR@newtheoremstyle}{plain}\% l warp
8   }%
9   {%
10     \theorem@style{#1}%
11     \renewcommand{\LWR@newtheoremstyle}{#1}\% l warp
12   }%
13   \begingroup
14     \csname th@\the\theorem@style \endcsname
15   \endgroup}
```

Patched to remember the style for this theorem type, and set it later when the environment is started.

```

17 { \def\@captype{figure} }
18 { }

File 371 **l warp-threeparttablex.sty**

§ 469 Package **threeparttablex**

Pkg threeparttablex threeparttablex is patched for use by l warp.

threeparttablex is used with longtable and booktabs as follows:

```
\begin{longtable}{ [column specifiers] }
[ . . . ] \endfirsthead % or \endhead, for print and HTML
\warpprintonly{ % not used in HTML
[ . . . ] \endhead % or \endfirsthead
[ . . . ] \endfoot
\bottomrule \insertTableNotes \endlastfoot
}
... table contents ...
\warpHTMLonly{ % HTML last footer
\bottomrule
\UseMinipageWidths % optional
\insertTableNotes
\endlastfoot
}
\end{longtable}
```

table width The table notes are created using a \multicolumn. By default the width is not specified to the browser, so long table notes can cause the table to be spread out horizontally. For HTML output, l warp guesses the width of the table depending on the number of columns, then restricts its guess to a min/max range. To use this guess for the width of the table notes, use \UseMinipageWidths before \insertTableNotes. The width is then specified, and in many cases the result is an improvement in overall table layout.

for HTML output: 1 \LWR@ProvidesPackagePass{threeparttablex}[2013/07/23]

The width is guessed depending on the number of columns, then limited to a min/max.

```
2 \renewcommand\insertTableNotes{%
3   \setlength{\LWR@templengthone}{.375in*\value{LWR@tabletotalLaTeXcols}}%
4   \setlength{\LWR@templengthone}{\minof{\textwidth}{\LWR@templengthone}}%
5   \setlength{\LWR@templengthone}{\maxof{2.5in}{\LWR@templengthone}}%
6   \multicolumn{\value{LWR@tabletotalLaTeXcols}}{c}{%
7     \parbox{\LWR@templengthone}{%
8       \begin{tablenotes}[\TPTL@optarg]%
9         \TPTL@font%
10        \TPTL@body%
11       \end{tablenotes}%
12     }%
13   }%
14 }%
15
16 \renewcommand\TPTL@tnotex[2]{\tnote{\nameref{#2}}}
```

---

```

File 374 l warp-tikz.sty**§ 472 Package tikz**

(Emulates or patches code by TILL TANTAU.)

Pkg tikz tikz is supported.

⚠ displaymath and matrices If using display math with `tikzpicture` or `\tikz`, along with matrices with the & character, the document must be modified as follows:

```
\usepackage{tikz}  
\tikzset{every picture/.style={ampersand replacement=\&}}
```

and each instance of & in the tikz expression must be replaced with \&.

Accept all options for lwarp-tikz:

```
1 \LWR@ProvidesPackagePass{tikz}[2015/08/07]
```

catcodes lwarp changes the catcode of \$ for its own use. The Tikz babel library temporarily changes catcodes back to normal for Tikz's use. tikz v3.0.0 introduced the babel library which handles catcode changes. For older versions, lwarp must change \$'s catcode itself.

Also see:

<https://tex.stackexchange.com/questions/16199/test-if-a-package-or-package-option-is-loaded>

```
2 \newbool{\LWR@tikzbabel}
3
4 \@ifpackagelater{tikz}{2013/12/20}%
5 {\usetikzlibrary{babel}\booltrue{\LWR@tikzbabel}}
6 {\boolfalse{\LWR@tikzbabel}}
```

Env pgfpicture The \pgfpicture environment is enclosed inside a \lateximage. Enclose the low-level \pgfpicture in a \latexitimage. This is also used by the higher-level \tikz and tikzpicture.

```
7 \preto\pgfpicture{%
8   \begin{latexitimage}[-tikz-\~\PackageDiagramAltText]%
9   \ifbool{\LWR@tikzbabel}%
10   {}%
11   {\catcode`\$=3}%
12 }%
13
14 \appto\endpgfpicture{\end{latexitimage}}
```

Tikz is placed inside an SVG image, so use the original meanings of the following:

```
15 \LetLtxMacro\pgfutil@minipage\LWR@print@minipage
16 \let\pgfutil@endminipage\endLWR@print@minipage

File 379 **lwarp-titling.sty**

§ 477 Package **titling**

(Emulates or patches code by PETER WILSON.)

Pkg **titling**

package support lwarp supports the native L^AT_EX titling commands, and also supports the packages authblk and titling. If both are used, authblk should be loaded before titling.
⚠ load order

\published and \subtitle If using the titling package, additional titlepage fields for \published and \subtitle may be added by using \AddSubTitlePublished in the preamble. See section 66.8.

The various titling footnote restyling commands have no effect.

Pass all options to `\warp-titling`:

for HTML output: 1 \LWR@ProvidesPackagePass{titling}[2009/09/04]

\@bsmtitleempty Patch \@bsmtitleempty:

```
2 \let\LWR@orig@bsmtitleempty\@bsmtitleempty
3 \renewcommand*\{@bsmtitleempty}{%
4 \LWR@orig@bsmtitleempty%
5 }
```

\keepthetitle Patch \keepthetitle:

```
6 \let\LWR@origkeepthetitle\keepthetitle
7 \renewcommand*\{\keepthetitle}{%
8 \LWR@orig@keepthetitle%
9 }
```

\killtitle Patch \killtitle:

```
10 \let\LWR@origkilltitle\killtitle
11 \renewcommand*\{\killtitle}{%
12 \LWR@orig@killtitle%
13 }
```

Env titlingpage

```
14 \renewenvironment*{titlingpage}
15 {%
```

Start an HTML titlepage div:

```
16 \LWR@printpendingfootnotes
17 \begin{titlepage}
```

Prepare for a custom version of `\maketitle` inside the `titlingpage`:

```
18 \LWR@maketitlesetup
19 \let\maketitle\LWR@titlingmaketitle
20 }
21 {
```

At the end of the environment, end the HTML titlepage div:

```
22 \end{titlepage}
23 }
```

Patch the pre/post title/author/date to add HTML tags, then initialize:

```
24
25 \pretitle{}
26 \posttitle{}
```

```

27
28 \preauthor{}
29 \postauthor{}
30
31 \predate{}
32 \postdate{}
```

\LWR@maketitlesetup Patches \thanks macros.

```
33 \renewcommand*{\LWR@maketitlesetup}{%
```

Redefine the footnote mark:

```
34 \def\@makefnmark{\textsuperscript{\@thefnmark}}
```

```
\thefootnote \Rightarrow \nameuse{arabic}{footnote}, or
\thefootnote \Rightarrow \nameuse{fnsymbol}{footnote}
```

Redefine the footnote text:

```
35 \long\def\@makefntext##1{%
```

Make the footnote mark and some extra horizontal space for the tags:

```
36 \makethanksmark~%
```

```
\makethanksmark \Rightarrow \thanksfootmark \Rightarrow \tamark \Rightarrow
@thefnmark \Rightarrow \itshape a (or similar)
```

Print the text:

```
37 ##1%
38 }% \@makefntext
39 }
```

\thanksfootmark

```
40 \renewcommand{\thanksfootmark}{%
41 % \hb@xt@{\thanksmarkwidth{\hfil\normalfont%
42 % \thanksscript{%
43 % \thanksfootpre \tamark \thanksfootpost%
44 % }%
45 % }%
46 }
```

\maketitle HTML mode. Creates an HTML titlepage div and typesets the title, etc.

Code from the `titling` package is adapted, simplified, and modified for HTML output.

```
47 \renewcommand*{\maketitle}{%
```

An **HTML** titlepage <div> is used for all classes.

48 \begin{titlepage}

Select which kind of footnote marks to use:

49 \@bsmarkseries

Set up special patches:

50 \LWR@maketitlesetup

Typeset the title, etc:

51 \@maketitle

Immediately generate any \thanks footnotes:

52 \LWR@stopars \@thanks \LWR@startpars

Close the **HTML** titlepage div:

53 \end{titlepage}

Reset the footnote counter:

54 \@bscontmark

55 }

\@maketitle Typesets the title, etc. Patched for **HTML**.

```
56 \DeclareDocumentCommand{\@maketitle}{}{%
57     \maketitlehooka

14 \DeclareDocumentCommand{\TOCEntryStyleStartInitCode}{m m}{}

```

File 381 **l warp-tocbibind.sty**

§ 479 Package **tocbibind**

(Emulates or patches code by PETER WILSON.)

Pkg **tocbibind** **tocbibind** is patched for use by **l warp**.

placement and toc options An index may be placed inline with other HTML text, or on its own HTML page:

Pkg **makeidx** **Inline, with a manual toc entry:**

A commonly-used method to introduce an index in a L^AT_EX document:

```

\cleardoublepage
\phantomsection
\addcontentsline{toc}{section}{\indexname} or chapter
\printindex

```

Pkg makeidx **On its own HTML page, with a manual TOC entry:**

```
\begin{warpprint}
\cleardoublepage
\phantomsection
\addcontentsline{toc}{section}{\indexname} or chapter
\end{warpprint}
\ForceHTMLPage
\ForceHTMLTOC
\printindex
```

Pkg tocbibind **Inline, with an automatic TOC entry:**

The `tocbibind` package may be used to automatically place an entry in the TOC.

```
\usepackage[nottoc]{tocbibind}
...
\cleardoublepage
\phantomsection % to fix print-version index link
\printindex
```

Pkg tocbibind **On its own HTML page, with an automatic TOC entry:**

```
\usepackage[nottoc]{tocbibind}
...
\cleardoublepage
\phantomsection % to fix print-version index link
\ForceHTMLPage
\printindex
```

Opt [tocbibind] numindex numbered index section Use the `tocbibind numindex` option to generate a numbered index. Without this option, the index heading has no number.

Other packages, such as `imakeidx`, may also have options for including the index in the Table of Contents.

for HTML output:

```
1 \let\simplechapterdelim\relax
2
3 \LWR@ProvidesPackagePass{tocbibind}[2010/10/13]

4 \renewenvironment{theindex}%
5 {%
6     \if@bibchapter

File 388 l warp-topcapt.sty**§ 486 Package topcapt**

Pkg topcapt topcapt is emulated.

for HTML output: 1 \LWR@ProvidesPackageDrop{topcapt}[2004/12/11]

```
2 \LetLtxMacro\topcaption\caption
```

File 389 l warp-tram.sty**§ 487 Package tram**

Pkg tram tram is emulated.

⚠ block only The HTML emulation uses a <div>, which must not appear inside an HTML or an HTML paragraph. For this reason, the `tram` environment should only be used to contain paragraphs inside a `\parbox` or `minipage`. `tram` should not be used to mark up inline text.

To disable `tram`, allowing source compatibility with inline uses:

```
\begin{warpHTML}
\renewenvironment{tram}[1][]{}{}
\end{warpHTML}
```

for HTML output: 1 \LWR@ProvidesPackageDrop{tram}[2013/04/04]

```
2 \newenvironment{tram}[1][]%
3   {\BlockClass[background:lightgray]{tram}}
4   {\endBlockClass}
```

File 390 l warp-transparent.sty**§ 488 Package transparent**

(Emulates or patches code by HEIKO OBERDIEK.)

Pkg transparent `transparent` is emulated. `\texttransparent` works for inline objects. `\transparent` only works for `\includegraphics`.

△ **Not X_ETEX!** Note that `transparent` does not work with X_ETEX.

for HTML output: Discard all options for `l warp-transparent`:

```

1 \LWR@ProvidesPackageDrop{transparent}[2016/05/16]

2 \newcommand*\transparent[1]{\edef\LWR@opacity{\#1}}
3
4 \newcommand*\texttransparent[2]{%
5 \begingroup%
6 \transparent{\#1}%
7 \InlineClass[opacity: #1]{transparent}{\#2}%
8 \endgroup%
9 }
```

File 391 **l warp-trimclip.sty**

§ 489 Package **trimclip**

Pkg `trimclip` `trimclip` is ignored.

for HTML output: `1 \LWR@ProvidesPackageDrop{trimclip}[2018/04/08]`

The third argument, the text, is not touched. This allows `\bgroup` / `\egroup`, and `verbatim` content.

```

2 \csdef{trimbox}{\ifstar@gobble@gobble}
3 \csletcs{trimbox*}{trimbox}
4 \def\endtrimbox{}
5 \csletcs{endtrimbox*}{endtrimbox}
6
7 \csletcs{clipbox}{trimbox}
8 \csletcs{clipbox*}{trimbox}
9 \csletcs{endclipbox}{endtrimbox}
10 \csletcs{endclipbox*}{endtrimbox}
11
12 \csletcs{marginbox}{trimbox}
13 \csletcs{marginbox*}{trimbox}
14 \csletcs{endmarginbox}{endtrimbox}
15 \csletcs{endmarginbox*}{endtrimbox}
```

File 392 **l warp-trivfloat.sty**

§ 490 Package **trivfloat**

(Emulates or patches code by JOSEPH WRIGHT.)

Pkg `trivfloat` `trivfloat` is forced to use the built-in `l warp` emulation for floats.

To create a new float type and change its name:

```
\trivfloat{example}
\renewcommand{\examplename}{Example Name}
\crefname{example}{example}{examples}
\Crefname{example}{Example}{Examples}
```

Discard all options for `lwarf-trivfloat`. This tells `trivfloat` not to use `floatrow` or `memoir`.

```
1 \LWR@ProvidesPackageDrop{trivfloat}[2009/04/23]
2 \LWR@origRequirePackage{trivfloat}
```

`\tfl@chapter@fix` Nullified at the beginning of the document. Is used by `trivfloat` to correct float chapter numbers, but is not needed for `lwarf`.

for HTML output:

```
3 \begin{warpHTML}
4 \AtBeginDocument{\DeclareDocumentCommand{\tfl@chapter@fix}{m m}{}}
5 \end{warpHTML}
```

§ 490.1 Combining `\newfloat`, `\trivfloat`, and `algorithmicx`

for HTML & PRINT:

For both print and HTML output:

⚠ When using `float`, `trivfloat`, or `algorithmicx` at the same time, be aware of conflicting file usage. `algorithmicx` uses `.loa`. `trivfloat` by default starts with `.loa` and goes up for additional floats, skipping `.lof` and `.lot`.

⚠ When using `\newfloat`, be sure to manually assign higher letters to the `\newfloat` files to avoid `.loa` used by `algorithmicx`, and any files used by `trivfloat`. Also avoid using `.lof` and `.lot`.

⚠ When using `\trivfloat`, you may force it to avoid conflicting with `algorithmicx` by starting `trivfloat`'s file extensions with `.lob`:

```
\makeatletter
\setcounter{tfl@float@cnt}{1} % start trivfloats with .lob
\makeatletter
```

```
7 \end{warpall}
```

File 393 **lwarf-truncate.sty**

§ 491 Package **truncate**

Pkg `truncate` `truncate` is ignored.

for HTML output:

```
1 \LWR@ProvidesPackageDrop{truncate}[2001/08/20]
```

```
2 \providecommand{\TruncateMarker}{}  
3 \newcommand{\truncate}[3][\TruncateMarker]{#3}
```

File 394 **l warp-turnthepage.sty**

§ 492 Package **turnthepage**

Pkg turnthepage turnthepage is ignored.

for HTML output:

```
1 \LWR@ProvidesPackageDrop{turnthepage}[2011/03/24]  
2 \newcommand{\turnthepage}{}  

---

```

File 395 **l warp-twoup.sty**

§ 493 Package **twoup**

Pkg twoup twoup is ignored.

for HTML output:

```
1 \LWR@ProvidesPackageDrop{twoup}[2007/02/26]  
2 \newcommand{\cleartolastpage}{}  

---

```

File 396 **l warp-typearea.sty**

§ 494 Package **typearea**

(Emulates or patches code by MARKUS KOHM.)

Pkg typearea typearea is emulated.

This package may be loaded standalone, but is also loaded automatically if koma-script classes are in use. \DeclareDocumentCommand is used to overwrite the koma-script definitions.

for HTML output:

```
1 \LWR@ProvidesPackageDrop{typearea}[2018/03/30]  
2 \DeclareDocumentCommand{\typearea}{o m}{}  
3 \DeclareDocumentCommand{\recalctypearea}{}{}  
4 \@ifundefined{footheight}{\newlength\footheight}{}  
5 \DeclareDocumentCommand{\areaset}{o m m}{}  
6 \DeclareDocumentCommand{\activateareas}{}{}  
7 \DeclareDocumentCommand{\storeareas}{m}{}  
8 \DeclareDocumentCommand{\BeforeRestoreareas}{s m}{}  
9 \DeclareDocumentCommand{\AfterRestoreareas}{s m}{}  
10 \DeclareDocumentCommand{\AfterCalculatingTypearea}{s m}{}  
11 \DeclareDocumentCommand{\AfterSettingArea}{s m}{}  

---

```

File 397 **l warp-typicons.sty**

§ 495 Package **typicons**

(Emulates or patches code by ARTHUR VIGIL, XAVIER DANAUX.)

Pkg typicons typicons is patched for use by l warp.

If \ticon is used, the name of the icon is used in the alt tag. Otherwise, for each of the individual icon macros, a generic alt tag is used.

for HTML output: 1 \LWR@ProvidesPackagePass{typicons}[2015/05/20]

```
2 \LetLtxMacro{\LWR@orig@symbol}{\symbol}
3
4 \let\LWR@orig@typicon@TI\TI

File 400 **l warp-underscore.sty**

§ 498 Package **underscore**

Pkg underscore underscore is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{underscore}[2006/09/13]

File 401 **l warp-units.sty**

§ 499 Package **units**

(Emulates or patches code by AXEL REICHERT.)

Pkg units units is patched for use by l warp.

Values are not styled by css, and take the style of the surrounding HTML text.

Units are styled according to the print version, so they will be forced to upright roman in HTML if the print version does so. It may be necessary to adjust the document's body css to match the print version.

for HTML output: 1 \LWR@ProvidesPackagePass{units}[1998/08/04]

```
2 \DeclareRobustCommand*\{\LWR@HTML@unit}[2][]{%
3 \ifblank{#1}%
4   {\LWR@textcurrentfont{#2}}%
5   {%
6     #1%
7     \ifthenelse{\boolean{B@UnitsLoose}}{~}{\,,}%
8     \LWR@textcurrentfont{#2}%
9   }%
10 }%
11 \LWR@formatted{unit}

12 \DeclareRobustCommand*\{\LWR@HTML@unitfrac}[3][]{%
13 \ifblank{#1}%
14   {%
15     \nicefrac{#2}{#3}%
16   }%
17   {%
18     #1%
19     \ifthenelse{\boolean{B@UnitsLoose}}{~}{\,,}%
20     \nicefrac{#2}{#3}%
21   }%
22 }%
23
24 \LWR@formatted{unitfrac}
```

For Mathjax:

```
25 \CustomizeMathJax{\newcommand{\unit}[2][]{#1 #2}}

23   \endgroup%
24 }
```

File 403 **l warp-upref.sty**

§ 501 Package **upref**

Pkg upref upref is ignored.

for HTML output: Discard all options for l warp-upref:

```
1 \LWR@ProvidesPackageDrop{upref}[2007/03/14]
```

File 404 l warp-url.sty

§ 502 Package **url**

(Emulates or patches code by DONALD ARSENEAU.)

Pkg url url is patched for use by l warp.

for HTML output: 1 \LWR@ProvidesPackagePass{url}[2013/09/16]

url uses math mode to print its string inside a group, so the original meaning of math is restored first.

```
2 \LetLtxMacro{\LWR@url@origUrl@FormatString}{\Url@FormatString}
3
4 \renewcommand*{\Url@FormatString}{%
5   \InlineClass{verbatim}{%
6     \LWR@restoreorigformatting%
7     \LWR@url@origUrl@FormatString%
8   }%
9 }
```

File 405 l warp-uspace.sty

§ 503 Package **uspace**

Pkg uspace uspace is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{uspace}[2016/11/06]

File 406 l warp-verse.sty

§ 504 Package **verse**

(Emulates or patches code by PETER WILSON.)

Pkg verse verse is supported and patched by l warp.

for HTML output: Pass all options for l warp-verse:

```
1 \LWR@ProvidesPackagePass{verse}[2009/09/04]
```

When using verse or memoir, always place a \\ after each line.

\attrib The documentation for the verse and memoir packages suggest defining an \attrib command, which may already exist in current documents, but it will only work for

print output. `lwarp` provides `\attribution`, which works for both print and `HTML` output. To combine the two so that `\attrib` is used for print and `\attribution` is used for `HTML`:

```
\begin{warpHTML}
\let\attrib\attribution
\end{warpHTML}
```

`Len \vleftskip` These lengths are used by `verse` and `memoir` to control the left margin, and they may already be set by the user for print output. New lengths `\HTMLvleftskip` and `\HTMLleftmargini` are provided to control the margins in `HTML` output. These new lengths may be set by the user before any `verse` environment, and persist until they are manually changed again. One reason to change `\HTMLleftmargini` is if there is a wide `\flagverse` in use, such as the word “Chorus”, in which case the value of `\HTMLleftmargini` should be set to a wide enough length to contain “Chorus”. The default is wide enough for a stanza number.

⚠ spacing

Horizontal spacing relies on `pdftotext`'s ability to discern the layout (-layout option) of the text in the `HTML`-tagged PDF output. For some settings of `\HTMLleftmargini` or `\HTMLvleftskip` the horizontal alignment may not work out exactly, in which case a label may be shifted by one space.

`Env verse` The `verse` environment will be placed inside a `HTML <pre>`.

```
2 \AfterEndPreamble{
3 \LWR@traceinfo{Patching verse.}
```

At the beginning of the `verse` environment:

```
4 \AtBeginEnvironment{verse}
5 {%
```

Use the original `list` environment inside a `<pre>` to attempt to preserve formatting.

```
6 \LWR@restoreoriglists%
```

`Pkg verse` The `verse` or `memoir` packages can place stanza numbers to the left with their `\flagverse` command. Do not allow them to go into the left margin, which would cause `pdfcrop` to crop the entire page further to the left:
`Cls memoir`

```
7 \ifdef{\vleftskip}{%
8 \setlength{\vleftskip}{\HTMLvleftskip}
9 \setlength{\leftmargini}{\HTMLleftmargini}
10 }{%
11 \LWR@forcenewpage
12 \LWR@atbeginverbatim{3}{verse}%
13 }
```

After the end of the `verse` environment, which places the `<pre>` tag at the regular left margin:

```
14 \AtEndEnvironment{verse}{%
```

```

15 \leavevmode%
16 \LWR@afterendverbatim{1}%
17 }

```

Patch to place poemtitle inside an HTML of class poemtitle:

```

18 \ifdef{\poemtitle}{%
19 \DeclareDocumentCommand{\vstypepoemtitle}{m}{%
20   \vspace{\beforepoemtitleskip}%
21   {\InlineClass{\poemtitle}{\poemtitlefont #1}\par}%
22   \vspace{\afterpoemtitleskip}%
23 }%
24 }{}%
25
26 \LWR@traceinfo{Finished patching verse.}%
27 }% AfterEndPreamble

```

File 407 **lwarf-versonotes.sty**

§ 505 Package **versonotes**

(Emulates or patches code by NORMAN GRAY.)

File 410 **l warp-vowel.sty**

§ 508 Package **vowel**

(Emulates or patches code by FUKUI REI.)

Pkg vowel vowel is patched for use by l warp.

This package has been tested with *pdflatex* and the Type 1 TIPA fonts using the following package load sequence:

```

\usepackage[T3,T1]{fontenc}
\usepackage[utf8]{inputenc}
\usepackage[noenc]{tipa}
\usepackage{vowel}

```

for HTML output:

```

1 \LWR@ProvidesPackagePass{vowel}[2002/08/08]

2 \renewenvironment{vowel}[1][]
3   {
4     \begin{lateximage}[-vowel-\~\PackageDiagramAltText]%
5       @vowel[#1]%
6     }
7   {
8     @@vowel%
9     \end{lateximage}%
10  }

```

File 411 **l warp-vpe.sty**

§ 509 Package **vpe**

Pkg vpe vpe is ignored.

for HTML output:

```
1 \LWR@ProvidesPackageDrop{vpe}[2012/04/18]
```

File 412 **l warp-vwcol.sty**

§ 510 Package **vwcol**

(Emulates or patches code by WILL ROBERTSON.)

Pkg vwcol vwcol is patched for use with l warp.

The width option is ignored. All vwcol environments adjust to 1–3 equal-width columns, depending on the width of the browser window.

The remaining options are supported, except for lines and maxrecursion.

for HTML output:

```
1 \LWR@ProvidesPackagePass{vwcol}[2015/02/10]
```

Factored from \vwcol. Each is given a style tag to append to the final style.

\LWR@vwcol@addrule {*style tag*}
2 \newcommand*{\LWR@vwcol@addrule}[1]{%
3 \appto{\LWR@vwcolstyle}{%
4 #1: %
5 \LWR@printlength{\vwcol@rule} solid \LWR@origpound\LWR@vwcol@rulecolor ; %
6 }%
7 }

\LWR@vwcol@addgap {*style tag*}
8 \newcommand*{\LWR@vwcol@addgap}[1]{%

```

9      \appto{\LWR@vwcolstyle}{%
10         #1: %
11         \LWR@printlength{\vwcol@sep} ; %
12     }%
13 }

```

Env vwcol {*key/values*}

Redefine the environment to add a HTML style. The style is built depending on the required options.

```
14 \renewenvironment*{vwcol}[1][]{%
```

New paragraph, and process the options:

```
15 \LWR@stopars%
16 \vwcolsetup{#1}%
```

Begin with no style:

```
17 \newcommand*{\LWR@vwcolstyle}{}%
```

presep and postsep are created with HTML margins:

```
18 \if@vwcol@presep
19     \appto{\LWR@vwcolstyle}{margin-left: 1em ; padding-left: .5em ; }
20 \fi
21 \if@vwcol@postsep
22     \appto{\LWR@vwcolstyle}{margin-right: 1em ; padding-right: .5em ; }
23 \fi
```

sep becomes column-gap:

```
24 \ifdimgreater{\vwcol@sep}{1sp}{
25     \LWR@vwcol@addgap{column-gap}
26     \LWR@vwcol@addgap{-moz-column-gap}
27     \LWR@vwcol@addgap{-webkit-column-gap}
28 }{}
```

rule become column-rule, while prerule and postrule become HTML borders:

```
29 \convertcolorspec{named}{\vwcol@rulecol}{HTML}\LWR@vwcol@rulecolor%
30 \ifdimgreater{\vwcol@rule}{0pt}{
31     \ifdimless{\vwcol@rule}{1pt}{
32         \setlength{\vwcol@rule}{1pt}
33     }{}
34     \LWR@vwcol@addrule{column-rule}
35     \LWR@vwcol@addrule{-moz-column-rule}
36     \LWR@vwcol@addrule{-webkit-column-rule}
37     \if@vwcol@prerule\LWR@vwcol@addrule{border-left}\fi
38     \if@vwcol@postrule\LWR@vwcol@addrule{border-right}\fi
39 }{}
```

Each of the justify options becomes a text-align. Indentation is added where appropriate.

```
40 \ifdefequal{\vwcol@justify}{\RaggedRight}{
41     \appto{\LWR@vwcolstyle}{text-align: left ; }
42     \ifdimgreater{\vwcol@parindent}{0pt}{
43         \appto{\LWR@vwcolstyle}{%
44             text-indent: \LWR@printlength{\vwcol@parindent} ; %
```

```

45      }
46  }{}
47 }{}

48 \ifdefequal{\vwcol@justify}{\RaggedLeft}{
49   \appto{\LWR@vwcolstyle}{text-align: right ; }
50 }{}

51 \ifdefequal{\vwcol@justify}{\Centering}{
52   \appto{\LWR@vwcolstyle}{text-align: center ; }
53 }{}

54 \ifdefequal{\vwcol@justify}{\justifying}{
55   \appto{\LWR@vwcolstyle}{text-align: justify ; }
56   \ifdimgreater{\vwcol@parindent}{0pt}{
57     \appto{\LWR@vwcolstyle}{%
58       text-indent: \LWR@printlength{\vwcol@parindent} ; %
59     }
60   }{}
61 }{}

```

Create the <div> with the assembled style:

```

62 \BlockClass[\LWR@vwcolstyle]{multicols}
63 }

```

When the environment ends:

```

64 {
65 \endBlockClass
66 \LWR@startpars
67 }

```

```

File 418 l warp-xcolor.sty**§ 516 Package xcolor**

(Emulates or patches code by DR. UWE KERN.)

Pkg xcolor xcolor is supported by l warp.

§ 516.1 Limitations

\colorboxBlock and \fcolorboxBlock \colorboxBlock and \fcolorboxBlock are provided for increased HTML compatibility, and they are identical to \colorbox and \fcolorbox in print mode. In HTML mode they place their contents into a <div> instead of a . These <div>s are set to display: inline-block so adjacent \colorboxBlocks appear side-by-side in HTML, although text is placed before or after each.

Print-mode definitions for \colorboxBlock and \fcolorboxBlock are created by l warp's core if xcolor is loaded.

background: none \fcolorbox and \fcolorboxBlock allow a background color of none, in which case only the frame is drawn, which can be useful for HTML.

color support Color definitions, models, and mixing are fully supported without any changes required.

colored tables \rowcolors is supported, except that the optional argument is ignored so far.

colored text and boxes \textcolor, \colorbox, and \fcolorbox are supported.

\color and \pagecolor \color and \pagecolor are ignored. Use css or \textcolor where possible.

§ 516.2 **xcolor definitions: location and timing**

The `lwarp` core and its `lwarp-xcolor` package are tightly integrated to allow comparable results for print, HTML, and print inside an HTML `lateximage`. This requires a number of definitions and redefinitions depending on whether each of `xcolor` and `lateximage` is being used, and whether print or HTML is being generated. Some of these actions are one-time when `xcolor` is loaded, and others are temporary as `lateximage` is used.

When `xcolor` is loaded in print mode: No special actions are taken at the time that `xcolor` is loaded in print mode, but see `\AtBeginDocument` below.

When `lwarp-xcolor` is loaded in HTML mode: `xcolor`'s original definitions are saved for later restoration. `\LWR@restoreorigformatting` is appended to restore these definitions for use inside a `lateximage`. New HTML-mode definitions are created for `\textcolor`, `\pagecolor`, `\nopagecolor`, `\colorbox`, `\colorboxBlock`, `\fcolorbox`, `\fcolorboxBlock`, and `fcolorminipage`.

`\AtBeginDocument` in print or HTML mode: See Section 85. If `xcolor` has been loaded, the print-mode `\fcolorbox` is modified to accept a background color of none, and additional definitions are created for `lwarp`'s new macros print-mode macros `\colorboxBlock`, `\fcolorboxBlock`, and `fcolorminipage`. The HTML versions of these macros will already have been created by `lwarp-xcolor` if it has been loaded.

For use inside an HTML `lateximage`, `\LWR@restoreorigformatting` is appended to temporarily set these functions to their print-mode versions.

In a `lateximage` in HTML mode: `\LWR@restoreorigformatting` temporarily restores the print-mode definitions of `xcolor`'s functions. See `\LWR@restoreorigformatting` on page 496.

`\color:`

Print: Used as-is.

HTML: Ignored by `pdftotext`, and will not appear.

HTML `lateximage`: Colors will appear in a `lateximage`.

`\textcolor:`

Print: Used as-is.

HTML: Redefined by `lwarp-xcolor`, page 1000.

HTML `lateximage`: Remembers and reuses the print version.

`\pagecolor:`

Print: Used as-is.

HTML: Ignored.

HTML `lateximage`: Colors will be picked up in a `lateximage`.

`\nopagecolor:`

Print: Used as-is.

HTML: Ignored.

HTML `lateximage`: Colors will be picked up in a `lateximage`.

\colorbox:

Print: Used as-is.

HTML: Redefined by `lwarp-xcolor`, page 1000.

HTML `lateximage`: Remembers and reuses the print version.

\colorboxBlock:

Print: Becomes `\colorbox`.

HTML: Newly defined by `lwarp-xcolor` to use a `<div>`, page 1001.

HTML `lateximage`: Remembers and reuses the print version `\colorbox`.

\fcolorbox:

Print: Modified to allow a background of none.

`\LWR@print\fcolorbox` at section 85

HTML: Redefined by `lwarp-xcolor`, page 1001.

HTML `lateximage`: Remembers and reuses the print version.

\fcolorboxBlock:

Print: Becomes `\fcolorbox`. Section 85

HTML: Newly defined by `lwarp-xcolor` to use a `<div>`, page 1002.

HTML `lateximage`: Remembers and reuses the print version `\fcolorbox`.

fcolorminipage:

Print: Newly defined in the `lwarp` core.

`\LWR@print\fcolorminipage` at section 85

HTML: Newly defined by `lwarp-xcolor`, page 1003.

HTML `lateximage`: Uses the print version.

\boxframe:

Print: Used as-is.

HTML: Redefined by `lwarp-xcolor`, page 1004.

HTML `lateximage`: Remembers and reuses the print version.

§ 516.3 Package loading

for HTML output:

```

1 \LWR@ProvidesPackagePass{xcolor}[2016/05/11]
2 \begin{warpHTML}

```

§ 516.4 Remembering and restoring original definitions

Remember the following print-mode actions to be restored when inside a `lateximage` environment:

```

3 \LetLtxMacro{\LWR@print@pagecolor}{\pagecolor}
4 \LetLtxMacro{\LWR@print@nopagecolor}{\nopagecolor}

```

`\LWR@restoreorigformatting` Inside a `lateximage` the following gets restored to their print-mode actions:

```

5 \appto{\LWR@restoreorigformatting}{%
6 \LetLtxMacro{\pagecolor}{\LWR@print@pagecolor}%
7 \LetLtxMacro{\nopagecolor}{\LWR@print@nopagecolor}%
8 }

```

§ 516.5 \normalcolor

```
\normalcolor
9 \DeclareRobustCommand{\LWR@HTML@normalcolor}{\color{black}}%
10
11 \LWR@formatted{normalcolor}
```

§ 516.6 HTML color style

`\LWR@findcurrenttextcolor` Sets `\LWR@tempcolor` to the current color.

```

12 \renewcommand*{\LWR@findcurrenttextcolor}{%
13 \protect\colorlet{\LWR@current@color}{.}%
14 \protect\convertcolorspec[named]{\LWR@current@color}{HTML}\LWR@tempcolor}%
15 }
```

Prints a color style for the current color.

```

16 \newcommand*{\LWR@currenttextcolorstyle}{%
17 \LWR@findcurrenttextcolor%
18 \ifdefined{\LWR@tempcolor}{000000}%
19 {}%
20 {color: \LWR@origpound\LWR@tempcolor ; }%
21 }
```

`\LWR@textcurrentcolor` $\{\langle text \rangle\}$ Like `\textcolor` but uses the current `\color` instead.

```

22 \DeclareDocumentCommand{\LWR@textcurrentcolor}{m}{%
23 \begingroup%
24 \LWR@FBcancel%
25 \LWR@findcurrenttextcolor%
```

```

26 \InlineClass[color:\LWR@origpound\LWR@tempcolor]{textcolor}{%
27   \renewcommand*\LWR@currenttextcolor{\LWR@origpound\LWR@tempcolor}%
28   #1%
29 }%
30 \endgroup%
31 }

```

\LWR@colorstyle {<2: *model*>} {<3: *color*>}

For a color style, prints the color converted to HTML colors.

```

32 \NewDocumentCommand{\LWR@colorstyle}{m m}{%
33 \begingroup%
34 \LWR@FBcancel%

```

Use the `xcolor` package to convert to an HTML color space:

```
35 \convertcolorspec{#1}{#2}{HTML}\LWR@tempcolor%
```

Print the converted color:

```

36 \LWR@origpound\LWR@tempcolor%
37 \endgroup%
38 }

```

\LWR@backgroundcolor [<*model*>] [<*color*>] [<*text*>]

Similar to `\textcolor`, but prints black text against a color background.

Converted into an HTML hex color span.

```

39 \NewDocumentCommand{\LWR@backgroundcolor}{O{named} m m}{%
40 \begingroup%
41 \LWR@FBcancel%
42 \InlineClass[background:\LWR@colorstyle{#1}{#2}]{backgroundcolor}{%

```

File 423 **l warp-xfrac.sty**

§ 521 Package **xfrac**

(Emulates or patches code by THE LATEX3 PROJECT.)

Pkg xfrac Supported by adding xfrac instances.

for HTML output: 1 \LWR@ProvidesPackagePass{xfrac}[2018-08-23]

⚠ font size In the user's document preamble, l warp should be loaded after font-related setup. During HTML conversion, this font is used by l warp to generate its initial PDF output containing HTML tags, later to be converted by pdftotext to a plain text file. While the text may be in any font which pdftotext can read, the math is directly converted into SVG images using this same user-selected font. xfrac below is set for the Latin Modern (lmr) font. If another font is used, it may be desirable to redefine \xfracHTMLfontsize with a different em size.

\sfrac [⟨instance⟩] {⟨num⟩} [⟨sep⟩] {⟨denom⟩}

A text-mode instance for the default font is provided below. The numerator and denominator formats are adjusted to encase everything in HTML tags. \scalebox is made null inside the numerator and denominator, since the HTML tags should not be scaled, and we do not want to introduce additional HTML tags for scaling.

In math mode, which will appear inside a lateximage, no adjustments are necessary.

for HTML & PRINT: 2 \begin{warpall}

\xfracHTMLfontsize User-redefinable macro which controls the font size of the fraction.

3 \newcommand*\{\xfracHTMLfontsize\}{.6em}

4 \end{warpall}

for HTML output: 5 \begin{warpHTML}

instances Instances of xfrac for various font choices:

Produce css for a small raised numerator and a small denominator.

Scaling is turned off so that pdftotext correctly reads the result.

```
6 \DeclareInstance{xfrac}{default}{text}{  
7   numerator-format = {  
8     \begingroup%  
9     \RenewDocumentCommand{\scalebox}{m o m}{##3}%  
10    \InlineClass{numerator}{#1},%  
11    \endgroup%

File 433 **l warp-xurl.sty**

§ 531 Package **Xurl**

Pkg xurl xurl is ignored.

for HTML output: 1 \LWR@ProvidesPackageDrop{xurl}[2018/06/02]

File 434 **l warp-xy.sty**

§ 532 Package **XY**

(Emulates or patches code by KRISTOFFER H. ROSE, ROSS MOORE.)

Pkg xy xy is patched for use by l warp.

for HTML output: 1 \LWR@ProvidesPackagePass{xy}[2013/10/06]

After xy modules have been loaded:

2 \AtBeginDocument{

The original definitions without a lateximage:

```

3 \LetLtxMacro\LWR@orig@xy\xy
4 \LetLtxMacro\LWR@orig@endxy\endxy

```

The outer-most xy environment is placed in a lateximage, but not more than one level deep, which would conflict with xy:

```

5 \renewcommand*\{\xy}{%
6   \ifnumcomp{\value{\LWR@lateximagedepth}}{>}{0}{%
7     {\addtocounter{\LWR@lateximagedepth}{1}}%
8     {\begin{lateximage}[-xy-\~\PackageDiagramAltText]}%
9     \LWR@orig@xy%
10 }%
11 %
12 \renewcommand*\{\endxy}{%
13   \LWR@orig@endxy%
14   \ifnumcomp{\value{\LWR@lateximagedepth}}{>}{1}{%

```

```

15      {\addtocounter{LWR@lateximagedepth}{-1}}%
16      {\end{lateximage}}%
17 }

```

The `\xybox` must use the original definitions of `\xy`, `\endxy`:

```

18 \def\xybox#1{%
19   \LWR@orig@xy#1\LWR@orig@endxy%
20   \Edge@c={\rectangleEdge}\computeLeftUpness@%
21 }

```

If `\xygraph` is used, it is placed inside a `lateximage`:

```

22 \@ifundefined{xygraph}{}{%
23
24 \LetLtxMacro{\LWR@origxygraph}{\xygraph}
25
26 \renewcommand{\xygraph}[1]{%
27   \begin{lateximage}[-xy- xygraph \PackageDiagramAltText]
28   \LWR@origxygraph{#1}
29   \end{lateximage}
30 }
31
32 }% xygraph defined
33
34 }% AtBeginDocument

```

67 \RenewDocumentCommand{\setcapmargin}{s o m}{}%

```

File 438 **l warp-patch-memoir.sty**

§ 536 Package **patch-memoir**

(Emulates or patches code by PETER WILSON.)

Pkg l warp-patch-memoir Patches for memoir class.

⚠ Not fully tested! Please send bug reports!

l warp loads this package when the memoir class is detected.

⚠ options clash While emulating memoir, l warp pre-loads a number of packages (section 536.1). This can cause an options clash when the user's document later loads the same packages with options. To fix this problem, specify the options before loading l warp:

```

\documentclass{memoir}
...
\PassOptionsToPackage{options_list}{package_name}
...
\usepackage{l warp}
...
\usepackage{package_name}

```

⚠ version numbers memoir emulates a number of packages, and declares a version date for each which often does not match the date of the corresponding freestanding package. This can cause warnings about incorrect version numbers. Since l warp is intended to support the freestanding packages, which are often newer than the date declared by memoir, it is hoped that memoir will update and change its emulated version numbers to match.

\verbfootnote is not supported.

\newfootnoteseries, etc. are not supported.

l warp loads pagenote to perform memoir's pagenote functions, but there are minor differences in \pagenotesubhead and related macros.

Poem numbering is not supported.

The verbatim environment does not yet support the memoir enhancements. It is currently recommended to load and use fancyvrb instead.

The memoir glossary system is not yet supported by l warpmk. The glossaries package may be used instead, but does require the glossary entries be changed from the memoir syntax to the glossaries syntax.

for HTML output: 1 \ProvidesPackage{l warp-patch-memoir}

§ 536.1 Packages

These are pre-loaded to provide emulation for many of memoir's functions. memoir pretends that abstract, etc. are already loaded, via its "emulated" package mechanism, but lwarp is directly loading the "lwarp-" version of each, which happens to avoid memoir's emulation system.

```

2 \RequirePackage{lwarp-abstract}% req'd
3 \RequirePackage{lwarp-array}% req'd
4 \RequirePackage{lwarp-booktabs}% req'd
5 % \RequirePackage{lwarp-ccaption}% emulated below
6 \RequirePackage{lwarp-changepage}% req'd
7 \RequirePackage{lwarp-crop}
8 \RequirePackage{lwarp-dcolumn}% req'd
9 \RequirePackage{lwarp-enumerate}% req'd
10 \RequirePackage{lwarp-epigraph}% req'd
11 \RequirePackage{lwarp-fancyvrb}% req'd
12 \RequirePackage{lwarp-footmisc}% req'd
13 \RequirePackage{lwarp-framed}% req'd
14 \RequirePackage{lwarp-hanging}% req'd
15 \RequirePackage{lwarp-makeidx}% req'd
16 \DisemulatePackage{moreverb}
17 \RequirePackage{lwarp-moreverb}
18 \RequirePackage{lwarp-mparhack}
19 \RequirePackage{lwarp-needspace}% req'd
20 \RequirePackage{lwarp-nextpage}% req'd
21 \RequirePackage{lwarp-pagenote}% req'd
22 \RequirePackage{lwarp-parskip}
23 \RequirePackage{lwarp-setspace}% req'd
24 \RequirePackage{lwarp-showidx}
25 \RequirePackage{lwarp-subfigure}% red'q
26 \makeindex

```

subfigure is emulated via subfig, which pre-defines subfigure and subtable, but memoir does not, so they must be tested for here:

```

27 \LetLtxMacro{\LWR@memorignewsubfloat}{\newsubfloat}
28 \RenewDocumentCommand{\newsubfloat}{O{} m}{%
29     @ifundefined{c@sub#2}{%
30         \LWR@memorignewsubfloat[#1]{#2}%
31     }{}%
32 }
33
34 \RequirePackage{lwarp-tabularx}% req'd
35 \RequirePackage{lwarp-titling}% req'd
36 % \RequirePackage{lwarp-tocbibind}% not emulated by memoir
37 \RequirePackage{lwarp-tocloft}% req'd
38 \RequirePackage{lwarp-verse}% req'd

```

§ 536.2 Preliminary setup

Bypass the `memoir` package mechanism:

```
39 \LetLtxMacro{\LWR@orig}{\label{mem@old}}{\label{mem@new}}
```

`memoir` already set the page size to a default, so it must be forced large for `lwarp`'s use, to avoid tag overflows off the page.

```
40 \setstocksize{190in}{20in}
41 \setlrmarginsandblock{2in}{2in}{*}
42 \setulmarginsandblock{1in}{1in}{*}
```

§ 536.3 Page layout

§ 536.11 Floats and captions

\newfloat [*1: within*] [*2: type*] [*3: ext*] [*4: capname*]

```

680 \RenewDocumentCommand*\{\newfloat}{o m m m}{%
681 \IfValueTF{#1}{%
682 {\\DeclareFloatingEnvironment[fileext=#3,within=#1,name={#4}]{#2}}{%
683 {\\DeclareFloatingEnvironment[fileext=#3,name={#4}]{#2}}{%

```

newfloat package automatically creates the `\listof` command for new floats, but `float` does not, so remove `\listof` here in case it is manually created later.

```

684 \cslet*\{\listof\#2s}{\relax}%
685 \cslet*\{\listof\#2es}{\relax}%
686 }

```

\newlistof [*within*] [*type*] [*ext*] [*listofname*]

Emulated through the `\newfloat` mechanism. Note that `memoir` uses a different syntax than `tocloft` for the name.

```

687 \RenewDocumentCommand*\{\newlistof}{o m m m}{%
688 {%
689 \IfValueTF{#1}{%
690 {\newlistentry[#1]{#2}{#3}{0}}{%

```

§ 536.17 Back matter

Redefined to write the LWR@autoindex counter instead of page. Note that memoir has two versions, depending on the use of hyperref.

```

993 \AtBeginDocument{
994
995 \def\@wrindexhyp#1|||\{%
996   \addtocounter{LWR@autoindex}{1}%
997   \LWR@new@label{LWRindex-\arabic{LWR@autoindex}}%
998 %   \ifshowindexmark\@showidx{\#1}\fi
999   \protected@write\@auxout{}{%
1000     {\string\@wrindexm\@m{\@idxfile}{\#1}{\arabic{LWR@autoindex}}}}%
1001   \endgroup
1002   \esphack}%

```

\specialindex behaves like a regular \index, pointing to where \specialindex is used. If \specialindex is used inside a figure or table after the \caption, then the hyperlink will be given the name of that particular figure or table.

```

1003 \def\@wrspindexhyp#1|||\{%
1004   \addtocounter{LWR@autoindex}{1}%
1005   \LWR@new@label{LWRindex-\arabic{LWR@autoindex}}%

File 439 **lwarp-common-multimedia.sty**

§ 537 Package **common-multimedia**

Pkg lwarp-common-multimedia Common code for multimedia, movie15, and media9.

The packages multimedia, movie15, and media9 are supported.

HTML5 <audio> and <video> objects are created for .mp3 and .mp4 files.

HTML5 <embed> objects are created for http and ftp links.

\href links are created for other media types. (Unfortunately, there is not much overlap between the file types supported for print output and the file types supported by HTML5.)

For media9, a multimedia object is inserted for each addresource=, as well as each flashvars source= and src=. This may result in duplicate objects.

Undesired objects may be nullified by placing them inside \warpprintonly or the warpprint environment.

Each HTML multimedia object includes the poster text, except for <embed> objects. For movie15, the text option is supported to specify the poster text.

The width, height, and totalheight options are supported. The HTML object is scaled according to the display width, correctly compensating for either tall or wide viewports.

Other options are ignored.

media9 \addmediapath is supported. It is assumed that the same path structure will exist for the HTML document.

HTML5 media controls are always specified for each <audio> and <video> object.

media9 slideshows are not supported.

\hyperlinkmovie, \movieref, and \mediabutton are not supported.

3D objects are not supported.

If using a YouTube™ video, use an “embedded” URL with .../embed/... instead of .../v/...

for HTML output: 1 \ProvidesPackage{lwarp-common-multimedia}[2019/04/22]

```
2 \RequirePackage{xkeyval}
3
4 \define@key{LWR@multimedia}{width}{\setlength{\LWR@multimedia@width}{#1}}
5 \define@key{LWR@multimedia}{height}{\setlength{\LWR@multimedia@height}{#1}}
6 \define@key{LWR@multimedia}{totalheight}{\setlength{\LWR@multimedia@height}{#1}}
```

```

7 \newlength{\LWR@multimedia@width}
8 \newlength{\LWR@multimedia@height}
9 \newlength{\LWR@multimedia@maxdimension}
```

\LWR@multimedia@printsize Proportional to `\linewidth` and the viewport's smaller dimension. This scales each object such that it will always fit on the screen, even if a tall or wide object inside a tall or wide viewport.

```

10 \newcommand*{\LWR@multimedia@printsize}{%
11     \setlength{\LWR@multimedia@maxdimension}{%
12         \maxof{%
13             \linewidth}%

Change History

§ 538 Chg Hist

For the most recent changes, see page 1080.

v0.10	General: 2016/03/08 Initial version . . . 1	Test Suite: Assigned cleveref name for Test Float. 1	
v0.11	General: 2016/03/11 1	Test Suite: Floatrow 1	
	Added section: Operating-System portability. 211		
	Added section: Selecting the operating system. 114		
	Test Suite: MS-WINDOWS in README.txt 1		
	Test Suite: Images and index in README.txt 1		
v0.12	\LWR@newhtmlfile: Bugfix: toc with numbered files. 359	v0.15	General: 2016/04/06 1
	General: 2016/03/14 1	Added. 726	
	Global: Uses \p@{type} in float captions. 1	Ampersand (&): Fixed handling when passed as an argument. 410	
	Test Suite: Sub-figures 1	Docs: Added warning icons for items needing special attention. 192	
v0.13	\CaptionSeparator: Fix for newer babel package. 480	Docs: Clarify print/HTML output. 114	
	\LWR@LwarpStart: \up and \fup 377	Docs: Moved the supported features table to the introduction. 65	
	General: 2016/03/24 1	Files: l warp_formal.css added. 1	
	Fix dollar-redefined bug for newer package. 952	Fix: steps counter 725	
	Removed package: subfig 1	Fixed & handling. 724	
	Test Suite: Ordinals, Subcaption 1	Test Suite: test_suite_formal.css file added. 1	
v0.14	\LWR@htmlsectionfilename: Fix: Links to home page. 320	v0.16	General: 2016/04/11 1
	General: 2016/03/31 1	\titlingpage: Improved print-output spacing. 385	
	floatrow: Added. 721	xfrac: Adjusted for the use of any font. 1008	
	Docs: Commands for a successful HTML conversion. 118	Added XeLaTeX, LuaLaTeX support. 193	
	Docs: Commands into a warpprint environment. 115	Docs: Font and UTF-8 support. 98	
	Docs: Newclude limitations. 163	Docs: Moved location of \usepackage{l warp}. 101	
	Docs: Table: Cross-referencing data structures. 465	Docs: Text not converting. 184	
	Docs: Table: Float data structures. 476	Lwarp no longer selects fonts. 98, 220	
	Docs: Trademarks section. 189	Removed package: suffix 1	
	Docs: Troubleshooting cross-references. 184	Test Suite: Improved titlingpage. 385	
v0.17	\LWR@htmlsectionfilename: Fix: Links when entire doc is one HTML page. 320	Test Suite: Lwarp no longer selects fonts. 1	
	General: 2016/04/14 1	Test Suite: Supports XeLaTeX, LuaLaTeX. 1	
	mdframed: Added. 811		

Test Suite: Fix: Print-version front-matter page numbers.	1
Test Suite: Mdframed	1
v0.18	
\LWR@includegraphicsb: Add: svgz file extension.	748
em, ex, %, px dimensions preserved.	748
Fix: \linewidth, \textwidth, \textheight inside a minipage.	748
Improved HTML output linebreaks.	748
\LWR@myshorttoc: Reorganize \HomeHTMLFilename logic.	483
\LWR@newhtmlfile: sideroc after title, improving responsive design.	358
\LWR@requeststoc: Reorganize \HomeHTMLFilename logic.	378
\LWR@subhyperref: Improved HTML output linebreaks.	473
\LWR@subhyperrefclass: Improved HTML output linebreaks.	473
\LWR@subinlinetext: Suppress extra space.	474
\hspace: \hspace supported.	575
General: 2016/05/19	1
File: l warp.css: Improved toc outline display.	1
Files: l warp.css and l warp_formal.css: Improved responsive design.	1
Microtype disabled during HTML generation	220
PDF Unicode input characters.	207
Test Suite: Verse package	1
latextimage: pdfcrop: --hires added.	530
Reorganize \HomeHTMLFilename logic.	530
Suppress extra space.	530
verse: Supports verse, memoir packages.	987
minipage: Fix: \linewidth, \textwidth, \textheight inside a minipage.	550
v0.19	
\HTMLFilename: Docs: Escape filename underscores.	320
\HomeHTMLFilename: Docs: Escape filename underscores.	320
\LWR@LwarpStart: Enabled \\ equal to \newline.	376
\LWR@doequation: MATHJAX support.	516
\LWR@doubledollar: MATHJAX support.	510
\LWR@filestart: l warp_mathjax.txt loaded.	373
\LWR@minipagestartpars: Suppresses paragraph tags between minipages.	573
\LWR@subsingle dollar: MATHJAX support.	504
\LateximageFontSizeName: Add: User-adjustable math/latexitimage font size.	525
\hspace: Fix: \hspace length computations.	575
\minipagewidth: Added: No width tag for the next minipage in HTML.	550
\warpHTMLonly: Added.	219
\warpprintonly: Replaces \rowprintedonly.	219
\xfracHTMLfontsize: Added.	1008
General: 2016/06/08	1
css for table note item.	949
MATHJAX support added.	513, 520, 521
multirow: Added optional args.	836
Adapts to tikz version.	952
Avoids MATHJAX.	503
cleveref: Loaded \AtEndPreamble.	545
Docs: Math options.	101
Docs: Table: Cross-referencing data structures, updated.	465
File: l warp.css: \noteitemheader added.	1
File: l warp_mathjax.txt added.	1
Introduction: MATHJAX support mentioned.	62
Options: mathsvg and mathjax	214
Supports colored \rule.	999
titles: null \pagestyle and \thispagestyle for HTML	953
v0.20	
\BlockClassSingle: Renamed from "LWR@htmldivclassname".	333
\HTMLDescription: Added \NewHTMLdescription. (Renamed in v0.30.)	344
\HTMLFilename: No longer escape underscores.	320
\HomeHTMLFilename: No longer escape underscores.	320
\InlineClass: Renamed from "inlineclass".	333
\LWR@LwarpStart: Fix: math cross references.	377
\LWR@closeparagraph: \unskip extra spaces.	337
No break tags in the start/end of a tabular.	337
\LWR@endofline: Fix: \\	573

\LWR@filestart: Adds meta	
description.	373
\LWR@htmldivclass: Added optional	
style.	331
\LWR@htmlelementclass: Added	
optional style.	331
\LWR@htmlsectionfilename:	
HTMLfilename: removed	
additional trailing ',', and may be	
empty.	320
Sections called "Index" or "index"	
have an underscore prepended to	
their filenames if no prefix.	320
\LWR@includegraphicsb: Fix:	
\linewidth in a floatrow.	748
Fix: Expands filename.	748
\LWR@longtabledatacaptiontag: Fix:	
Pars in captions.	448
\LWR@section: Combined higher-level	
sections together into files.	365
\LWR@setOSWindows: Auto-detects	
operating system.	213
\LWR@subhtmlelementclass: Factored	
code.	331
\SetHTMLFileNumber: Add: Control	
file numbers.	320
\cpagerefFor: User-redefinable word	
for page references.	546
\dotfill: Inserts an ellipsis.	573
\hfill: Inserts a \quad.	572
\hrulefill: Inserts a short rule.	573
\hspace: Add: Supports HTML thin	
breakable space.	575
\hyperindexref: Print mode provided	
in case hyperref not used.	494

Added @, <, > columns.	404
Added single-expansion data	
arrays.	316
Code factored into independent	
l warp_html files.	586
Docs: Examples for generating	
HTML file names.	112
Docs: Improved index.	1
Enhanced titling support.	383
File: l warp.css: Minor fixes for	
validation.	1
File: l warpmk used to compile	
print, HTML, indexes, and	
lateximages.	1
Fix: \linewidth in a floatrow.	724
Moved sidebar and example code	
to test suite.	1
Page geometry set to 6in wide with	
large margins.	221
Parallel versions of aux files for	
print/HTML.	1
Removed reliance on make, grep,	
gawk.	1
Tabular: \unskip extra spaces.	404
Test Suite: HTML meta descriptions.	1
verbatim: Added.	394
BlockClass: Added optional style.	333
Renamed from "blockclass".	333
\LWR@nestspan: Fix: Minipages inside a	
span.	328

v0.21

\LWR@L warpStart: Changed	
lateximages to a .txt file.	376
\LWR@filestart: Skip title if not	
given.	373

\LWR@newhtmlfile: Skip title if not given.	358	v0.24	\LWR@htmlfileref: Fix: Index links while \tracingl warp.	467
\marginpar: Fixed source listing.	350	\hspace: Add: \hspace \fill converts to 2em	575	
\marginparBlock: Fixed source listing.	351	\hypertocfloat: List of floats responds to lofdepth, lotdepth.	490	
General: 2017/02/23	1	General: 2017/03/15	1	
fontenc: Added.	731	floatrow: Support for subfig.	721	
<i>lwarpmk</i> : Fix: lwarpmk again for WINDOWS.	295	subfig: Added.	929	
<i>lwarpmk</i> : Fix: lwarpmk limages for WINDOWS.	295	tikz: For tikz v3.0.0 or later, auto-loads tikz babel library if necessary.	952	
<i>lwarpmk</i> : Fix: <i>lwarpmk</i> uses lateximages text file instead of shell script.	295	Docs: Filename underscore.	106, 120	
Add: Errors for misplaced packages.	193	Fix for inline images.	952	
Docs: Added internet class.	71	No longer preloads subcaption; conflicted with subfig.	225	
Docs: Added TeX2page, GladTeX.	71	picture: Fix for inline images.	548	
Docs: Installing on WINDOWS.	77			
File: <i>l warp_tutorial.txt</i> added.	81			
v0.22		v0.25	\LWR@loadnever: Added the ability to prevent conflicting packages.	195
\lWR@parseDcolumn: Added tabular D column.	419	\addcontentsline: Handles theorems.	482	
\lWR@parsebangcolumn: Added tabular ! column.	415	General: 2016/03/22	1	
\lWR@parseablecols: Unknown table column types become l. Added tabular D, !, X columns.	423	amsthm: Added.	605	
\lWR@printmccoldata: Added tabular D, !, and X columns.	442	ellipsis: Added.	688	
General: 2017/03/02	1	emptytype: Added.	689	
abstract: Added.	588	framed: Added.	735	
changepage: Added.	643	lips: Added.	790	
dcolumn: Added.	682	mdframed: Help avoid hyphenation.	813	
ftnright: Added.	738	ntheorem: Added.	859	
geometry: Nullified commands.	740	showidx: Added.	911	
layout: Added.	783	theorem: Added.	944	
l scape: Added.	799	Basic LATEX theorems: improved CSS.	395	
mcaption: Added.	811	Docs: Adds credits for patched code.	1	
nameref: Added.	843	Docs: Testing l warp.	180	
nextpage: Added.	846	Fix: Allows XELATEX and LuaLATEX to preload graphics and graphicx.	197	
parskip: Added.	874			
showkeys: Added.	911			
sidecap: Added.	912			
tabularx: Added.	937			
variorref: Supported.	126			
verse: Added.	986			
v0.23		v0.26	General: 2017/03/31	1
\lWR@parseablecols: Fix for vert bar column type.	423	l warp.css: Improved responsive marginpar and marginblock.	253	
\lWR@printmccoldata: Fix for vert bar column type.	442	cutwin: Added.	681	
General: 2017/03/02	1	endnotes: Added.	691	

sidenotes: Added.	913
Docs: Improved MiKTEX install instructions.	76, 78
Dollar span avoided in a lateximage.	503
Footnotes now are LATEX boxes instead of pagenotes.	345
lateximage: Labels track page numbers of lateximages.	530
Print mode now uses a minipage of \linewidth.	530
picture: Fix for \makebox in picture. .	548
v0.27	
\LWR@footnotetext: Fix for table footnote par tags.	347
General: 2017/04/04	1
letrine: Added.	787
microtype: Fix with XeLATEX, LuaLATEX.	827
soul: Added.	920
ulem: Added.	981
Docs: Installing utilities for MACOS. .	79
Docs: Limitations of saveboxes. .	121
Page geometry modified to reduce line overflow.	221
v0.28	
\@wrindex: Improved indexing.	493
\HTMLAuthor: Added \HTMLauthor. (Renamed in v0.30.)	344
\LWR@LwarpEnd: If FormatEPUB or FormatWP, no bottom nav.	379
\LWR@LwarpStart: FormatWordProcessor forces single-file output.	376
\LWR@filestart: Adds HTML meta author.	373
\LWR@forcenewpage: Forces new PDF page before major environments. .	325
\LWR@htmlcomment: Breaks ligatures in HTML comments.	330
\LWR@includegraphicsb: Adapts to graphics syntax.	748
\LWR@newhtmlfile: If FormatEPUB or FormatWP: skips headers, footers, nav.	358
\LWR@parsetablecols: Added L, C, R, J column types.	423
\LWR@startref: Removed space. . .	469
\chapter: If EPUB, prints footnotes before each section.	371
\hyperindexref: Improved indexing. .	494
\textup: Fixed span class.	561
General: 2017/04/14	1
glossaries: Added.	742
graphics: Added.	743
tabularx: Fix for optional pos.	937
tabulary: Added.	937
<i>lwarpmk</i> : Add: printglossary and htmlglossary commands.	295
Added boolean FormatEPUB.	239
Added boolean FormatWP.	239
Added boolean HTMLDebugComments.	234
Added boolean HTMLMarkFloats, changed to WPMarkFloats as of v0.42.	240
Docs: Modfyng lwarpmk and index processing.	180
File: lwarp_mathjax.txt: Updated CDN repository.	293
Forced oneside to maintain large right margin.	221
v0.29	
\LWR@includegraphicsb: Fix: Error when no optional arguments. . .	748
General: 2017/04/15	1
*.lwarpmkconf: Add: language option for config files.	252
lwarpmk.conf: Add: language option for config files.	252
<i>lwarpmk</i> : Add: language option for config files.	295
Add: lwarpmklang option for lwarp.	215
Docs: Using a glossary	92
v0.30	
\CSSFilename: Renamed from \NewCSS.	342
\HTMLAuthor: Renamed from \HTMLauthor.	344
\HTMLDescription: Renamed from \NewHTMLdescription.	344
\HTMLFirstPageTop: Renamed from \SetFirstPageTop.	342
\HTMLLanguage: Renamed from \MetaLanguage.	372
\HTMLPageBottom: Renamed from \SetPageBottom.	342
\HTMLPageTop: Renamed from \SetPageTop.	342
General: 2017/04/29	1
<i>lwarp-newproject</i> removed, and combined with <i>lwarp</i>	245
<i>lwarpmk</i> : Add: xdyfile configuration option.	295
<i>lwarpmk</i> : Fix: <i>xindy</i> and <i>texindy</i> adjusted for <i>pdflatex</i> , <i>xelatex</i> and <i>lualatex</i>	295

<i>lwarpmk</i> : Fix: <i>xindy</i> now used for print index generation with <i>latexmk</i>	295	Add: Tabular at and bang columns now have their own HTML columns.	404
<i>lwarpmk</i> : language now used for both index and glossary generation.	295	cleveref: Fix: Loaded \AtEndPreamble.	545
File: <i>l warp_html.xdy</i> renamed to <i>l warp.xdy</i>	292	Fix: Incorrectly-inline math environments.	521
Fix: *.css files only written in print mode.	253	New handling of & to localize catcode changes.	404
Fix: <i>l warp.xdy</i> only written in print mode.	292	v0.34	
Fix: <i>l warp_mathjax.txt</i> : Only written in print mode.	293	\@fnsymbol: Text symbols instead of math.	386
Option <i>lwarpmklang</i> changed to <i>IndexLanguage</i>	215	\InlineClass: Moved optional argument in front of mandatory.	333
Option <i>OSWindows</i> replaces macro <i>\warpOSwindows</i>	215	\LWR@htmldivclass: Moved optional argument in front of mandatory.	331
Option <i>xdyFilename</i> added.	215	\LWR@htmlelementclass: Moved optional argument in front of mandatory.	331
Option <i>latexmk</i> replaces macro <i>\UseLatexmk</i>	217	\LWR@htmlelementclassline: Moved optional argument in front of mandatory.	332
Options <i>HomeHTMLFilename</i> and <i>HTMLFilename</i> replace macros <i>\HomeHTMLFilename</i> and <i>\HTMLFilename</i>	216	\LWR@htmlspanclass: Moved optional argument in front of mandatory.	329
v0.31		\LWR@nullfonts: Improved font control.	564
General: 2017/05/15	1	\LWR@restoreorigformatting: booktabs: Works inside <i>lateximage</i>	496
<i>keyfloat</i> : Improved compatibility.	777	Improved font control.	496
v0.32		\LWR@subhtmlelementclass: Moved optional argument in front of mandatory.	331
\RequirePackage: Fix: Ignores blanks in package list.	229	\LWR@tabledatatablecolumntag: booktabs: Works inside <i>lateximage</i>	454
General: 2016/06/09	1	\fboxBlock: Added.	557
<i>glossaries</i> : Prevent error with <i>\glo@name</i> not defined.	495	\makebox: Fix: Handles paren arg.	555
<i>lwarpmk</i> : Fix: <i>io.lines()</i> changed to <i>file:lines()</i> due to <i>luatex</i> changes.	295	General: 2017/08/08	1
v0.33		babel-french : Adds fixed-width HTML spaces to punctuation.	326
\HTMLAuthor: Fix: Provides empty default author if none given.	344	balance : Added.	622
\LWR@loadbefore: Fix: No <i>\PackageError</i> if already loaded.	195	booktabs: Works inside <i>lateximage</i>	458, 631
\LWR@parseatcolumn: Fix: Column alignment with leftmost @.	414	boxedminipage2e: Added.	633
\LWR@tabledatatablesinglecolumntag: Fix: Macros in tabular could cause extra data cell.	430	crop: Added.	678
\LWR@vspace: Add: \vspace nullified.	576	enumerate: Added.	692
\StartDefiningTabulars: Add: Avoids error: Misplaced alignment tab character &.	317	enumitem: Added, no longer required.	692
General: 2017/07/10	1	everyshi: Added.	700
amsmath : Removed <i>fleqn</i> option.	602	fancybox: Added.	702
<i>fancyhdr</i> : Fix: Optional args for \head, etc.	706	fancyverb: Added, no longer required.	708
		figcaps: Added.	714
		filecontents: Required. Patched for morewrites.	224

floatpag: Added.	721	\LWR@HTMLsanitizeexpand: Fix for babel-french.	527
flushend: Added.	726	\LWR@closeparagraph: Extra HTML source space after paragraphs.	337
fullpage: Added.	738	\LWR@currenttextcolor: Fix for \rule when xcolor not loaded.	571
hyperxmp: Added.	766	\LWR@nullfonts: Fix: Filenames while using MATHJAX.	564
idxlayout: Added.	767	\LWR@restoreorigformatting: siunitx: Improved super/subscripts in a lateximage.	496
marginfit: Added.	808	\LWR@section: Improved spacing.	365
mdframed: Improved mdtheorem patch.	818	\LWR@stoppars: Extra HTML source space after paragraphs.	340
moreverb: Added.	829	\fbox: Fix: Uses \fboxrule and \fboxsep.	556
paralist: Added.	872	\framebox: Fix: Handles width and horiz position.	555
pdfescape: Added.	875	\makebox: Fix: Handles width and horiz position.	555
pdfsync: Added.	879	General: 2017/08/17	1
prelim2e: Added.	885	babel-french: Adjustements for French variants, load order, footnotes, ellipses.	326
rotfloat: Added.	897	footnote: Extra HTML source space after paragraphs.	733

shadow: Added.	910	siunitx: Improved symbol support.	915
syntonly: Added.	936	transparent: Added.	978
titlesp: No longer required.	953	upref: Added.	985
titleref: Prevented.	956	xcolor: Added \fcolorboxBlock, \colorboxBlock.	995
xmpincl: Added.	1011	xcolor: Fix: Background none in print mode.	995
Added.	1003	xcolor: Refactored	
Docs: Horizontal space limitations.	1	\LWR@colorstyle.	999
Docs: Misplaced alignment character.	184	xcolor: Uses \fboxrule and \fboxsep.	995
File: l warp_mathjax.txt: Version change.	293	xcolor: \fcolorbox etc. now work inside lateximage.	995
File: README.txt: updated.	1	Docs: Reorganized: Special cases and limitations.	118
Fix: Added the eqnarray environments.	521	Source: Improved formatting.	1
Improved font control.	559	tabular: Fix for babel-french.	459
Lists refactored to remove enumitem requirement.	396	lateximage: Footnotes appear in regular text instead of the lateximage minipage.	530
Verbatim refactored to remove fancyvrb requirement.	392	v0.37	
tabular: booktabs: Works inside lateximage.	459	\@include: Maintains independent aux files for HTML.	232
lateximage: Fix: lateximage with minipage, \parbox, \makebox, \fbox, \framebox, \raisebox, \scalebox, \reflectbox.	530	General: 2017/08/19	1
BlockClass: Moved optional argument in front of mandatory.	333	IATEX accents: Added.	244
fminipage: Added.	557	babel-french: Adjustment for load order.	326
\LWR@nestspan: Fix: Minipages, BlocksClass, and lists inside a span.	328		
v0.35			
General: 2017/08/08	1		
Fix: \textbf and related.	559		
v0.36			
\LWR@footnotetext: Extra HTML source space after paragraphs.	347		
Force HTML superscripts.	347		
\LWR@HTMLsanitize: Fix for babel-french.	526		

color: Prevented.	675	\AddSubtitlePublished: Added.	388
comment: Maintains independent cutfiles for print, HTML.	219	\LWR@domulticolumn: Add: Optional vpos and # rows.	445
siunitx: Improved symbol support.	915	\LWR@restoreorigformatting: Appended with \appto instead of calling various macros.	496
textcomp: Improved support.	940	\LWR@tabledatacolumntag: Don't start a data cell if see \TabularMacro.	454
<i>lwarpmk</i> : Removes additional HTML aux files.	295	\ResumeTabular: Added.	453
File handles reorganized.	231	\TabularMacro: Added.	453
v0.38		\multicolumnrow: Added.	452, 838
\@secCntformat: Added for appendix.	364	\printauthor: Removed minipages.	384
\ForceHTMLPage: Added.	362	Supports authblk with <div>s of class oneauthor instead of tabular.	384
\ForceHTMLTOC: Added.	362	\thanksmarkseries: Removed minipage footnotes.	963
\LWR@section: \part* starts a new HTML page, for appendix.	365	General: 2017/09/05	1
Modified spacing, uses \newline.	365	a4wide: Added.	588
\newline: Added trailing \quad.	488	a4: Added.	587
\part: Fix with article class.	371	a5comb: Added.	588
General: 2017/08/27	1	addlines: Added.	596
appendix: Added.	610	anySize: Added.	609
arabicfront: Added.	611	authblk: Added.	619
chappg: Added.	646	bigdelim: Added.	628
color: Forces xcolor as well.	675	bigstrut: Added.	629
fix2col: Added.	716	ebook: Added.	687
fncychap: Added.	727	fullwidth: Added.	739
grffile: Added.	756	midpage: Added.	828
metalogo: Added.	823	multirow: Add: New optional vpos argument.	836
nonumonpart: Added.	857	multirow: Add: Supports left/right border for bigdelim.	836
nopageno: Added.	857	multirow: Fix: Long text argument.	836
pagenote: Option page disabled.	872	supertabular: Added.	934
realscripts: Added.	891	textarea: Added.	939
relsize: Added.	894	titling: Improved compatibility.	959
romanbarpageNumber: Added.	896	titling: Removed extraneous center environments.	960
romanbar: Added.	896	typearea: Added.	980
scalefnt: Added.	899	xtabular: Added.	1013
siunitx: Removed from lwarpm core.	915	zwpagelayout: Added.	1017
textcomp: Removed from lwarpm core.	940	Docs: Reorganized tabular discussion.	154
tocbibind: Added.	965	Titlepage \published and \subtitle removed. \AddSubtitlePublished restores.	388
xltextra: Added.	1010	titlepage: Clear pending footnotes.	383
<i>lwarpmk</i> : Added <code>print1</code> and <code>html1</code> actions.	295	Removed minipages.	383
Added \markboth, \sloppy, etc.	324	titlingpage: Clear pending footnotes.	960
Docs: Enhanced <i>Supported Features</i> table.	65		
Docs: Index, tocbibind.	133		
Docs: Starred sections.	129		
v0.39		v0.40	
\@maketitle: titling version.	962	\@chapCntformat: Added for tocbibind, anonchap.	364
Native L ^A T _E X version.	387		
Removed minipages.	387, 962		
Supports authblk with <div>s of class oneauthor instead of tabular.	387, 962		

\LWR@HTMLhline: Added	458	v0.41
\LWR@includegraphicsb: Add: Full \graphicspath support	748	
\LWR@nullfonts: Fix: Long arguments for expandable command	564	
\LWR@restoreorigformatting: Improved L ^A T _E X logos inside a \lateximage	496	
Improved symbols inside a \lateximage	496	
Nullified \InlineClass, etc. inside a \lateximage	496	
\LWR@tabledatacolumnntag: Fix for bigdelim: \ldelem, \rdelem	454	
\chapter: Added support for quotchap	371	
\multicolumnrow: Fix: Adapts to older multirow and xparsse	452	
\simplechapterdelim: Added for tocbibind, anonchap	364

General: 2019/02/08	1
\LWR@currentautosec: Fix for LOF, LOTfloat in home page.	364
lwarf.css: Added niceframe.	253
lwarf.css: Improved css for definition lists.	253
lwarf_formal.css: Improved css for table notes.	287
lwarf_one_limage.txt: Image directory and prefix.	292
acronym: Fix for acronym in caption.	595
acronym: No longer uses zref.	595
ar: Added.	610
caption: Fix for options clash.	231
ed: Added.	688
extramarks: Updated to v3.10.	700
fancyhdr: Updated to v3.10.	706
fancyvrb: Improved HTML formatting.	703
ketexutf: Patch for references.	586
memoir: Docs re: version numbers.	161
multicolrule: Updated for v1.2.	834
nameauth: Added.	842
register: Verified for v1.9.	893
subcaption: Added.	928
tocbasic: Updated to v3.26a.	964
truncate: Added.	979
zref: No longer used.	225
<i>lwarpmk</i> : Added ImagesDirectory and ImagesName.	295
<i>lwarpmk</i> : Fix for cleanimages .	295
Added early checks for colortab, epsf, hyper, picinpar, picins, sistyle, ucs.	196
Added option ImagesDirectory.	214
Added option ImagesName.	215
Added support for indentfirst.	341
Docs: Updated Converting an existing document.	96
Fix: Minipages inside multicols.	833
Improved HTML formatting.	709
Package dates added where possible.	587
Sanitize filenames.	218
tabular: Fix: Minipages inside tabular.	463
lateximage: Added \BaseJobname for multiple projects.	530
Improved HTML formatting.	531
minipage: Honor \LWR@forceminipagefullwidth.	552
v0.67	
\FilenameNullify: Added.	567, 571
\FilenameSimplify: Added.	353, 357
\LWR@doequation: xfakebold: Added support.	517
\LWR@doubledollar: xfakebold: Added support.	510
\LWR@filenamenoblocks: Improved file name generation.	353
\LWR@lookforpackagename: easyReview: Supported.	228
\LWR@nullfonts: Add'l symbols.	564
\LWR@simplifycustom: Added.	353
\LWR@subsingledollar: xfakebold: Added support.	505, 508, 509
General: 2019/02/23	1

academicons: Added.	590	threepartable: Fix for caption type.	949
bbding: Added.	622	<i>lwarpmk</i> : Improved error handling if incomplete compile.	295
changes: Added.	644	Prevented alg, algorithmic, fncylab, pdfcprot.	196
color: Fix for version number.	675	tabular: Fix: \warpprintonly inside tabular.	461
dingbat: Added.	684		
eurosym: Added.	699		
fitbox: Added.	715

handling.	740
l warp-common-multimedia : Fix	
links with new LaTeX	
kernel.	1047, 1048
titlesec : Fix for \titleclass.	958

Index of Objects

This is an index of macros, environments, booleans, counters, lengths, packages, classes, options, keys, files, and various other programming objects. Each is listed by itself, and also by category. In some cases, they are further subdivided by [class].

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition.

Troubleshooting Index

This index is a sorted reference of problems and solutions. In order to make it easier to locate a solution, the same issue may be addressed by more than one entry.

Entries with higher page numbers are often duplicates of entries with lower page numbers, as the same warning may occur within the user manual and again within the source code for a given package.
